

Aerospace

Our nationwide piping and mechanical services for the aerospace industry have been used on high profile project such as A380 Airbus Fuel Test Facility in Bristol

We also were contracted to provide the role of principal contractor along with installation of cover systems such as:

- Compressed Air piping systems
- Gas piping systems
- Cooling Water piping systems
- High Pressure Steam systems
- Condensate piping system
- Cryogenic piping systems
- Associated steelwork and supports
- Process skid units
- Modular piping erection was provided via pre-assembled pipe racks.
- Coded welding
- Role of Principal Contractor, which included management of subcontractors such as Electrical, Control & Instrumentation, scaffolders, insulation and commissioning engineers
