

FSL Aerospace Limited

FSL Service

FSL's unrestricted product range policy means we can supply all your product needs. Our scope of fasteners, fixings and associated components enables us to supply all of your workshop consumables as well, bringing the benefits of reliable supply and vendor reduction.

FSL does not just sell from stock. Our experienced sourcing team will scour the world for quality sources of product, from either stockists or manufacturers, when required.

FSL can offer special packaging and customised kitting solutions, combining convenience with performance, reducing inventory and costs.

To increase speed and achieve the highest possible levels of accuracy, barcoding is utilised wherever possible.

FSL receives deliveries into a quarantine area, preventing sale. We then inspect all product before acceptance into our facility. Our Inspection processes have been audited and approved to Delegated Source Approval level for many of our clients which means that we can ship directly to their operating stock without them having to inspect these goods themselves.

FSL Management Systems

FSL designs, implements and operates bespoke Management Systems for the supply of product direct to the point of use on the client's premises.

Each system is tailored to the individual client to meet their exacting needs, reduce waste and non-value added processes bringing true value and cost savings.

Management Systems are able to:

- Reduce administration by eliminating the need for individual purchase orders,
- Rationalise your supply chain,
- Eliminate the need for Goods-In processes,
- Free up internal resource by delegating inspection to FSL,
- Maintain stocks at optimum levels,
- Free up valuable stores space, by having stocks at point of use,
- Save on 'walking time' from shop floor to stores,
- Monthly consolidated invoicing, reducing the number of invoices being processed,
- Provide the security of back up stocks at FSL,
- Improving speed and accuracy by utilising barcoded systems.
