

Youth Shelters

Youth shelters are manufactured from heavy duty powder coated steel.

Available with or without side panels (examples shown have no side panels fitted)

If side panels are required we recommend that the shelter is not fully enclosed as this can cause the occupants to be completely hidden from view.

Dimensions are approximately 3m high x 3m wide.

Available in the colours of your choice.

Assembled using stainless steel tamper resistant bolts, they can be concreted into place, or bolted down onto a galvanised steel floor, this is simply fixed to any level surface by means of a ground anchor system, enabling the shelter to be removed and re-sited if necessary. With gloss powder coated roofs and no hand or footholds they are designed to deter climbing.
