

There are a huge variety of mobile devices from £30 simple tethered barcode scanners to £3000 full terminals with all sorts of functionality. Here you can see two mid range devices, both with full communication functions, camera, ruggedised, and with built in laser scanner. RFID versions can be supplied too. If you need something to meet particular circumstances or specification do let us know. The CP30 terminal is not only in use by our own auditors but by many storekeepers for check in/ checkout and van drivers dropping off barcoded items at delivery points. The Mio tablet has a larger scrollable screen and often used for safety inspection recording.
