HEATING ELEMENTS

Applications : Tubular sheathed elements are quasi universal solution used to heat up solids, liquids or gas through the JOULE EFFECT up to about 800°C. Depending on their use, they transfer their energy by natural or forced convection, by conduction or induction.

SEALING
WP+: Waterproof resin sealing. The most standard one. Excellent sealing that guarantees insulation in case of prolonged storage or application in moisture conditions. Maximum admitted connection temperature of 160°C.
TM : Silicon cost effective solution operational up to a connection temperature of 350 °C in environment exempt from moisture.
HT : Cement high temperature, no water-tight sealing, operational up to a connection temperature of 450°C. Using in atmospheres without moisture.

BENT TO SHAPE

Tubular heating elements can be shaped to suit your requirements. We can manufacture and deliver special elements quickly and cost-effectively.

DETERMINATION OF REQUIRED POWER

To heat a volume V (solid, liquid or gas) in a given time T (without state modification).

Units to be known

- V : Volume in liter or dm³
- ρ : Density en kg/dm³
- V x ρ : Mass to be heated in kg
- t1 : Initial temperature in °C
- t2 : Final temperature in °C
- Cp : Specific heat kcal/kg.°C
- T : Heating time in hours.

Result : P = Power to be installed in kW

1,2 : safety factor taking into account the tolerances on voltage supply and ohmic value of the heating element.

$$P = \frac{V \times \rho \times Cp \times (t2 - t1) \times 1,2}{860 \times T}$$

Vaporization of a mass M (liquid) in a given time T when the liquid is already at its boiling temperature.

Units to be known

- M : Weight of the liquid in kg.
- L : Latent heat of vaporization in kcal/kg
- T : Heating time in hour.

Result : P = Power to be installed in kW

1,2 : safety factor taking into account the tolerances on voltage supply and ohmic value of the heating element.

$$P = \frac{M \times L \times 1,2}{860 \times T}$$

HEATING ELEMENTS

STANDARD STRAIGHT TUBULAR HEATING ELEMENTS

Connection by M6 threaded steel rod.

The elements are annealed, so that they can be bent them to shape.

HEATING ELEMENTS FOR INDUSTRIAL OVENS

Heat-resistant stainless steel sheathed elements for industrial ovens and drying cabinets up to 300°C. Heating by natural convection (air) or radiation (solids).

Supply voltage: 230V single phase. Connection by M6 threaded terminals and M6 ground terminal.

P/N.	Power +5 -10%	A (mm)	B (mm)	C (mm)	Weight (kg)
4501-20	1000 W	272	173	125	0,180

4501-22	1500 W	356	218	155	0,220

TUBULAR ELEMENTS FOR HOTPLATES

Stainless-steel sheathed element in a flat circular shape to heat solids up to 300°C by conduction (2 heating stages from 1000W upwards). Supply voltage : 230V single phase. Connection by flat terminals with calliper.

P/N.	Power +5 -10%	Ø (mm)	H (mm)	Weight (kg)	Fig.
4501-01	500 W	109	60	0,160	A

4501-03	1400 W	180	75	0,600	B
4501-04	2000 W	220	75	0,700	B

Accessories :

Clips for models 4501-01 (Weight 0,040 kg)

P/N. 4501-08 - 2 holes, 86 mm between centres

P/N. 4501-09 - 2 holes, 138 mm between centres

SQUARE-SECTION HEATING ELEMENTS

Especially suited to heat flat and cylindrical surfaces, their square cross-section allows a large area of contact with the object to be heated. This enables large transfers of heat and high temperatures (max. 700°C on the heating element).

Sheathed elements are available either straight or shaped to your requirements (minimum bend radius = 19 mm)

Tubes of 5x5 or 7,1x7,1 section are in stainless steel.

Connection at one end by 60cm cable with earth wire protected by metal braid.

HT seals.

The heating element is retained in a groove.

FLUIDS HEATING

Screw plug immersion heaters

VULCALOY flange immersion heaters

Flange immersion heaters

Clamp flange immersion heaters

Ceramic core elements

ATEX screw plug and flange immersion heaters

Removable immersion heaters

Drum heaters

Fluorated tank bottom heaters

Fluid circulation heaters

Heating hoses

SELECTING AN IMMERSION HEATER

APPLICATION: Electric immersion heaters are suited to heat up fluids (liquids and gas) by natural (static fluids) or forced convection (fluids in circulation). They are designed to heat up trough heating elements (pins, monotubes or ceramic cores) in direct contact with the fluid to be heated. Heating elements layout enables the optimization of heat transfers.

REQUIREMENTS:

Immersion heater requirements ?

- Type of fluid ?
- Volume of liquid to be heated ?
- Start temperature (before heating) (t_1) ?
- Target temperature. (t_2) ?
- Heating time ?
- Pressure ?
- Available space (Internal and external)
- Mounting interface
- With or without control
- With or without safety probes ?

SOLUTIONS :

See table page 13

- Suitable materials (Heating elements, flanges...)
- Specific load

Liquid (Static)	Specific load
Water	10 W/cm ² Max
Oil	2 W/cm ² Max
Other liquids contact us.	

- Power of the immersion heater
- Type of immersion heater

Pressure	Type of immersion heaters
Atmospheric	Removable, screw plug or flange
15 bar Max	Screw plug or flange
50 bar Max	Flange
Over 50 bar	Contact us

Power requirements ?

$$P_{ch} \text{ (power to heat)} + P_{th} \text{ (thermal losses)} = P \text{ total power requirements (kW)}$$

Power requirements?

- Weight of liquid : m (kg)
- Specific heat : C_p (kcal/kg x °C)
- Start temperature : t_1 (°C)
- Target temperature: t_2 (°C)
- Heating time : T (hour)

$$P_{ch} \text{ (kW)} = \frac{m \times C_p \times (t_2 - t_1) \times 1,2}{860 \times T}$$

$$m = V \times \rho$$

Volume (dm³)

Density (kg/dm³)

ρ

C_p

$$V = \pi \times \frac{\varnothing^2}{4} \times H$$

\varnothing = Internal diameter (dm)
 H = Height of liquid (dm)

$$V = l \times L \times H$$

l = length (dm)
 L = Width (dm)
 H = Height of liquid (dm)

	ρ	C_p
Paraffins	0,88	0,52
Mineral oil	0,9	0,5
Water	1	1
Glycol	1,1	0,67
Acetic acid	1,1	0,51
Formic acid	1,2	0,39
Hydrochloric acid	1,2	0,60
Sulphuric acid	1,8	0,33

Thermal losses ?

- Vessel surface area: S (m²)
- Room temperature : t_a (°C)
- Target temperature : t_2 (°C)
- Exchange coefficient : K (kcal/h x m² x °C)
- Thickness of insulation : (mm)

$$P_{th} = \frac{S \times (t_2 - t_a) \times K}{860}$$

S Exchange surface (m²)

K Exchange factor (kcal/h x m² x °C)

$$S = (\pi \times \varnothing \times H) + (\pi \times \frac{\varnothing^2}{4})$$

\varnothing = External diameter (m)
 H = Height of tank (m)

$$S = [2 \times H \times (l + L)] + (l \times L)$$

l = Tank's length (m)
 L = Tank's width (m)
 H = Tank's height (m)

Thickness of insulation

	without	25 mm	50 mm	100 mm
External underground tank	9	1,7	1	0,55
External sheltered tank - wind ≤ 10 km/h	30	2,1	1,1	0,59
External underground tank - wind ≤ 45 km/h	30	2,3	1,2	0,61
External underground tank - wind ≤ 90 km/h	45	2,9	2,5	1

CAUTION : An inappropriate immersion heater may result in :

- **Excessive Heating time** : too low power. **Too short heating time** : electric installation over dimensioned.
- **Alteration or even destruction of the fluid to be heated** : The fluid doesn't withstand the power load of the heater (W/cm²).
- **Destruction of the immersion heater** : The material of the heater doesn't fit with the fluid to be heated. The heater gets quickly corroded.

SELECTING AN IMMERSION HEATER

SELECTING SUITABLE SHEATHED MATERIALS

- The recommendations in this table are only indicative and do not involve the responsibility of Vulcanic. The customer must verify the suitability of the material chosen with the thermal process.

x = not suitable < = Possible under certain conditions << = recommended

SCREW PLUG IMMERSION HEATERS

ISO M77x200 AND 2"1/2 BSPP SCREW PLUG WITH REMOVABLE MONOTUBES AND CONTROL TO HEAT OIL OR AQUEOUS LIQUIDS UP TO 200°C

The junction boxes of screw plug heaters with heating power > 3kW, are equipped with 2 cables glands and one additional relay.

AQUEOUS LIQUIDS OR OIL HEATING

CLAMPABLE FLANGE IMMERSION HEATERS

Pharmaceutical, Chemical and Food & Beverage industries favour the installation of stations called **Cleaning in Place (CIP)** or **Sterilization in place (SIP)** for their **Aseptic production** line. These cleaning processes for fixed or mobiles stations need a heating system in compliance with applicable requirements.

Main requirements:

- **NO RETENTION ZONE** through the fluid flow (interface connection with tri-clamps...)
- **MATERIALS QUALITY** in contact with the fluid (stainless steel 316L, gasket approved by FDA/USP class VI, ...)
- **SURFACE QUALITY** of components in contact with the fluid $0,6 \leq Ra \leq 0,8$ (Heating pin or monotube according the value of Ra expected)
- **FULL TRACEABILITY** of the product with 3.1 certificate - Components **COMPLY WITH CUSTOMER'S STANDARD** (ASME BPE, SMS, ISO, ...)

FLANGE IMMERSION HEATERS

Specifications		
Heating power	≤ 25 kW	
Supply voltage	single or 3 phase	
Process temperature	70 up to 90°C	
Flange	Type	Clamp
	Ø	maxi 6"
	Material	Stainless steel 316L
	Joint	Welded
	Surface quality	Ra ≤ 0,6 or Ra ≤ 0,8
Norms	Customer standards (SMS, ASME, BPE, ISO ...)	
Gasket	Material	EPDM, Silicone, Viton
	Compliance	FDA, USP ClassVI (other on request)
Heating Elements	Material	Inox 316L
	Type	Pins (surface quality Ra ≤ 0,8) Monotubes (surface quality Ra ≤ 0,6)
Specific load	up to 10W/cm ²	
Surface treatment	Mechanical polishing and electrolytic, passivated	
Junction box		Stainless steel 304 or Polyamide
	IP	55
Cable gland on request		Polyamide
		Stainless steel cable gland (suitable to junction box)
Dimensions	A maxi	1100 mm
	B maxi	80 mm

LIQUIDS CIRCULATION HEATERS

In line heater 1 Body

In line heater 2 Bodies

Heating power	≤ 50 kW	
Process temperature	70 up to 90°C	
Length max.	1200 mm	
Vessel	Pressure	NP16
	Ø Vessel	up to 3"
	Material	Stainless steel 316L
	Inlet/Outlet	Tri-clamp ferrule
	Norms	Customer standards (SMS, ASME BPE, ISO ...)
Support	Material	Stainless steel 304
Vessel temperature safety device	RTD PT100, control thermostat, thermocouple with stainless steel or polyamide junction box	

IMMERSION HEATERS WITH CERAMIC CORE ELEMENTS

Junction box in polyamide 6/6

Including:
1 Junction box
1 Cable gland in polyamide
1 Gasket

Suitable Cer. core Ø (mm)	IP	Cable Gland	P/N.
47	55	ISO 20 Bis	1199-00
58	55	ISO 25 Bis	2081-99

Set of pocket in stainless steel 304 L

Including:
1 Pocket,
1 Flange
1 Gasket

Pocket Øint (mm)	Pocket Øext (mm)	L (mm)	Ø Flange (mm)	P/N.
48	51	920	85	5711-00
60	63,5	990	101	5710-00
60	63,5	1015	101	5710-01

Caution : All the parts are supplied separately, the customer has to cut the pocket at the length required, weld the flange and join the parts together.

Preparing and assembling parts

Cut the pipe at the right length L_g DDG

$$L_g DDG = (LST \times 1,02) + 25$$

Available installations

Welded on the vessel:

The pocket is welded directly on the tank

Screw plug ISO M77x200 and BSPP 2"1/2 :

A stainless steel ISO M77 screw plug is welded on the pocket

Description	Material	P/N.
Screw plug M77x200 + Gasket Ø78 (Klingerite)	Inox. 316L	9624-06
Screw plug 2" 1/2 BSPP + Gasket Ø 2" 1/2 (Klingerite)	Klingerite	9624-07
Sleeve for welding M77	Inox. 316L	9624-04
Sleeve for welding 2" 1/2 BSPP	Inox. 316L	9624-05

Flange DN80 :

A stainless steel DN 80 Flange is welded on the pocket

Description	Material	P/N.
Flange ND80 NP16 RF	S. Steel 316L	9624-08

← This part must be totally immersed in the liquid

JUNCTION BOXES FOR IMMERSION HEATERS

JUNCTION BOXES FOR SCREW PLUG AND FLANGE IMMERSION HEATERS UP TO DN 125

SPECIFICATIONS : WITH CONTROL THERMOSTAT (A cable gland ISO 16 is recommended on junction box from a heating power > 3kW)
WITH THERMOCOUPLE PROBE OR RTD PT100 (An additional cable gland ISO 16 is recommended on the junction box)

Cable gland, gasket and fixing parts are supplied with each junction box.

LEVEL INDICATOR

Float type magnetic level sensor for horizontal installation in liquids of relative density $\geq 0,8$ output on 2 A/250 VAC configurable for opening or closing. PVC cable 1,5 m length. Brass body and stainless steel float. Maxi working temperature : + 110°C. Maxi working pressure : 16 bar. Protection : IP 65

Description	P/N.
Magnetic level indicator	32020-01

CONTROL THERMOSTATS FOR IMMERSION HEATERS

CONTROL UNITS FOR SCREW PLUG IMMERSION HEATERS - IP 55

ONLY SUITABLE TO SCREW PLUG HEATERS WITH POCKET

M77 or 2"1/2 screw plug without offset

M77 or 2"1/2 screw plug with offset

Material: painted aluminium

These control units are designed to simplify the installation of ISO M77 or 2"1/2 immersion heaters with pocket. Heating is switched on/off by an integrated control thermostat. Comprises a sealed aluminium IP 55 IK 5 junction box fitted with a thermostat and/or a temperature safety cut out. The solution for small and medium-sized installations.

Maxi Power (kW)	Voltage (V)	Junction IP	Control thermostat				P/N.

CONTROL UNIT WITH SAFETY CUT OUT AND RELAY UP TO 30 kW - IP 55

Dimensions (mm) :
160 x 240 x 170

ONLY SUITABLE TO IMMERSION HEATERS WITH POCKET

2", M77, 2"1/2 screw plug heaters without offset

2", M77, 2"1/2 screw plug heaters with offset

DN80 Flange immersion heaters without offset

These control units are designed to simplify the installation of ISO M77, 2", 2"1/2 ou ND80 immersion heaters with pocket. Comprise a sealed plastic IP 55 junction box fitted with a control thermostat and a temperature safety cut out, a remote control and an electromechanical relay suitable up to 30 kW. Thermostat temperature range : 0-100°C. Adjustment of thermostat by interior knob. Cut-out temperature range 50 up to 300°C. ON/OFF pilot ligh under a transparent cover. Box equipped with 2 sealing glands.ISO 40 and ISO 20

Material: plastic

On request : READY TO USE

Vulcanic provides also the control unit directly mounted and cabled on your immersion heaters from the P/N: 9027-11

Option	P/N.
Assembly on screw plug	9027-11

DIGITAL CONTROL UNIT WITH WATERPROOF JUNCTION BOX IP 66

Description	P/N.
Digital temperature controller under waterproof junction box	9028-01
Sensor PT100 Ohms Ø 4 mm lg= 50 mm Cable lg = 5 m	9028-02

Waterproof polycarbonate junction box IP66

Digital controller

Dimensions
200 x 160 x 110 (mm)

Polyamide cable glands

Transparent lid

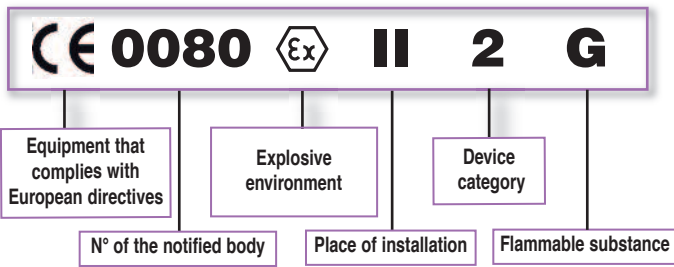

Temperature controller « On/Off », compact, easy to use, suitable to control immersions heaters, heating cables, or silicone heating panels up to 3,5 kW. Controlling an heating power over 3,5 kW requires an installation with an electromechanical relay.

Main specifications :

- Temperature measured, setting point, relay output position are indicated by digits.
- Input temperature PT100 2 wires (-50°C.....+250°C), with long length compensation integrated.
- Message « Err LO/Hi » in case of temperature sensor broken or in short circuit .
- Very easy to configurate with push button **temp +/temp-**; setting of hysteresis and short cycle protection.
- Relay output with close contact when temperature measured is lower the set temperature. Breaking capacity 16A/230V single phase.
- Waterproof and transparent casing IP 66. Resistant against shock and vibration.
- Cable glands suitable to supply voltage cables from Ø6 up to 13 mm.

Each set contains right-angled connection clips for cross pattern circuits in single or triple phases with delta, star or parallell coupling according to the instruction manual supplied with the immersion heater.

REMOVABLE IMMERSION HEATERS

SELECTING YOUR REMOVABLE IMMERSION HEATER

Removable immersion heaters are the best way to heat up liquids in open containers.

The application of an immersion heater determines its shape and dimensions.

Therefore, it is necessary to know the properties of the liquid to be heated, the volume of the tank, the time required for the rise in temperature, and the minimum depth of liquid in the tank. On the basis of this information your Vulcanic expert will be able to select you the right immersion heater.

The diagrams opposite, show a selection of VULCANIC products range and shapes.

CARBON STEEL WITH ALUMINIUM COATING

For Oil (2 W/cm²), water and alkaline baths.

Consists of a ceramic core element in an aluminium plated steel tube, with IP 55 IK5 junction box in fiberglass reinforced polyamide and cable gland Iso 20 bis.

P/N.	Power. +5 -10%	Voltage	Specific load (W/cm ²)	Ht (mm)	Lc (mm)	Weight (kg)
5005-01	1000 W	230V mono	2	450	350	2

Accessories for types 5126-5019 :

- Stainless steel fixingbracket P/N. 9652-01 (weight 0,135 kg)

REMOVABLE IMMERSION HEATERS

QUARTZ

For laboratory acid baths

Consists of a small-diameter ceramic core element in a quartz tube with acid-resistant rubber box.
Connection by cable, length approx. 1,5 m

P/N.	Power. +5 -10%	Voltage	Specific load (W/cm ²)	Ht (mm)	Lc (mm)	Weight (kg)
5019-04	300 W	230V mono	3	250	150	0,4

SCOURED AND PASSIVATED STAINLESS STEEL 316L / Din 1.4404

For oil use 2 W/cm² maxi, water and aqueous solutions

Consists of a sheathed tube wound into a vertical coil, with bakelite handle and gland Iso 20.

P/N.	Power +5 -10%	Voltage	Specific load (W/cm ²)	Ht (mm)	Lc (mm)	Weight (kg)	P/N.	Power +5 -10%	Voltage	Specific load (W/cm ²)	Ht (mm)	Lc (mm)	Weight (kg)

Model with temperature sensor and digital control thermostat.

To order a model with temperature sensor and integrated digital controller thermostat, replace '4544' with '4548'.

Accessories : • Stainless steel fixing bracket for horizontal tank edge fitting (weight 0,07 kg). P/N. 5144-01

NICKEL-PLATED COPPER

For water and laboratory aqueous solutions

Consists of a sheathed tube wound into a vertical coil, with premould polyamid handle, hook to attach to container edge and connecting cable, length 1m.

P/N.	Power +5 -10%	Voltage	Load (W/cm ²)	Ht (mm)	Lc (mm)	Weight (kg)
4536-16	600 W	230V mono	6	150	55	0,185
4536-17	1000 W	230V mono	6	190	90	0,230

REMOVABLE IMMERSION HEATERS FOR LARGE HEIGHTS

Immersion heater designed to heat liquids in tall open containers.

Special features of these immersion heaters are the method of fixing the heating elements and the rising tube.

The heating elements are welded into a sealed box. The electric cables between the elements and the connecting box are protected by a large diameter rising tube.

Powers available :

- 3 kW up to 13,5 kW : for fuel
- 3 kW up to 30 kW : for water
- 18 kW up to 40 kW : for circulating water.

Gland Iso 25 up to 18kW.

Gland Iso 40 up to 36kW.

Different electrical output .

DRUM HEATERS

HEATING BELTS FOR DRUMS

Leakproof models allowing the heating of viscous products in drums, such as wax, grease, pomade, gelatin, organic acids, tar, asphalt, coal-tar... Light, easy to install, robust, these heating belts avoid all carbonization of the product because of its large surface (load 1w/cm²). To be installed on the bottom. Male and female plugs supplied. Voltage : 230V 1P. Height 120mm. For drums 50 to 500 litres up to 200°C Supply voltage : 230 VAC. 1P

On request : Supply voltage 110 VAC, Other thermostat -5 to 40 °C

Option: Thermostat range 0 /+ 200°C, controls the temperature of the product to be heated.

P/N. without Thermostat	P/N. with Thermostat	Power. +5 -10%	Ø Range (mm)	Weight (kg)
7507-01	7507-02	2500 W	570-615	6,3

7507-19	7507-20	2500 W	650-710	7,8

FLEXIBLE HEATING BELTS FOR DRUMS

Flexible models with high mechanical strength fitted with an adjustable thermostat 20/120°C. Designed to heat drums from 25 to 200 litres according to the model, these belts consist of a heating element embedded in a flexible silicone panel. Power supply cable length : 2m.

Voltage : 230V 1P. Electrical box : 115 x 70 x 60 - Protection class : IP 43

Spare part : Female connector P/N. 9565-01 (weight 0,04 kg).

Control thermostat (IP 42 IK 7) : 7507-99.

P/N.	Ø range (mm)	Height (mm)	Capacity (l)	Power. +5-10%	Weight (kg)

7531-15	577/605	180	200	1500 W	2,2

DRUM HEATERS FOR PLASTIC DRUMS

The heaters are specifically designed to melt or reduce the viscosity of soap, fats, varnishes and oil based type of products.

This drum heater is stitched into an insulated jacket made from a water-resistant Teflon/Polyester material, insulated with glass filament complete, with quick release buckles for ease of installation and removal. The heating elements are made of double insulated construction for safety. Each heater is fitted with a control thermostat (0/90°C). Flexible tough rubber sheathed supply cable, length 3 m.

Supply voltage : 230 VAC. 1P

On request : Supply voltage 110 VAC, Other thermostat -5 to 40 °C

P/N.	Circumference (mm)	Height (mm)	Capacity (l)	Power +5-10%
7535-05	1020	400	25	200 W
7535-07	1250	460	50	250 W
7535-08	1650	370	105	400 W
7535-06	1950	450	200	450 W

GAS BOTTLE HEATER

This gas bottle heater is designed with a flexible heating red face and an insulated blue face. Temperature maintenance up to 55°C max, by compensating the bottle cooling down due to the gas expansion, and thus to avoid the pressure fall which prevents gas from flowing out the bottle.

• 2 heating sections which are regulated separately.

• Protection : IP54.

• Main supply length : 3000 mm.

REF.	Ø (mm)	Height (mm)	Voltage (V)	Power +5-10%
7535-10	220 up to 260	1450	230	400 W

CONTAINER HEATERS

The container heaters are designed to heat products stored in 1000 litre intermediate bulk containers. Two types of heaters are available.

• The 7540-01/ 02 is a silicone mat heater for placement **below** the container liner before filling. An insulation jacket covering four sides and the lid is also available to aid warming up time.

Performance : - water temp. from 15°C to 70°C in 42 hours (without insulated jacket)

- water temp. from 15°C to 70°C in 30 hours (with insulated jacket)

• The 7540-03/ 04, an insulated nylon heater jacket, which covers all four sides and has an optional insulated lid.

Performance : - water temp. from 15°C to 55°C in 56 hours (without insulated lid)

- water temp. from 15°C to 80°C in 56 hours (with insulated lid)

On request (7540-03/04) : - supply voltage 110 VAC

- other thermostat -5 / + 40 °C

P/N.	Power. +5-10%	Voltage (V)	Thermostat	Jacket Insulated
7540-01	2700 W	230	0/90°C	no
7540-02	2700 W	230	0/90°C	yes

P/N.	Power. +5-10%	Voltage (V)	Thermostat	Jacket Insulated	Lid Insulated
7540-03	2x1000 W	240	0/90°C	yes	no
7540-04	2x1000 W	240	0/90°C	yes	yes

DRUM WRAPPING HEATERS

These wrapping heating systems are especially designed to heat drums, allow to liquefy products such as asphalt, grease, resin...

Composed of a metal base plate, protected by a high temperature coating with a diameter of 600 mm, this heater especially designed for the 200 litre drums. The heated plate is equipped with a thermostat 0 / 150 °C

Supply cable length = 2 m

Dimensions plate: Ø = 600mm H = 70mm

Overall dimensions L = 880mm s = 600 mm H = 105 mm

P/N.	Power +5-10%	Voltage (V)	Weight (kg)	Description
7535-55	900 W	230 mono	20	base

FLUORATED IMMERSION HEATERS

CIRCULAR PTFE TANK BOTTOM HEATERS

Especially suited for frost protection and made of fluoropolymer, the circular heaters allows heating or maintenance of temperature of corrosive chemical baths in storage tanks.

The flexible heating element is fixed to a flexible circular support. This form allows insertion into a tank through a 'manhole'.

Diam 200mm min. with models A to F

Diam 500mm .min with models G to K.

Circular PTFE heaters offer a simple, economical solution for heating liquids in storage tanks.

Made of Teflon®

Load 1 W/cm², max. temperature 90°C, without gland.

Model	Ø Element (mm)	Power (kW)	Voltage (V)
A	600	1	230 mono
B	600	2	230 mono
C	900	1	230 mono
D	900	3	230 mono
E	1100	1	230 mono
F	1100	6	400 Tri
G	1500	2	230 mono
H	1500	9	400 Tri
J	1900	3	230 mono
K	1900	12	400 Tri

No Type	Coating	Frame in
26495	FEP	PVDF
26458	PFA	PVDF
26497	FEP	PP
26468	PFA	PP

Important : Types 26458 A to K are supplied without gland (90°C max.) ; other models can be operated up to 100°C when fitted with a sealing gland. Other options on request : single phase or three phase voltage, intermediate powers and loads, cable entry via gland or flange. Teflon® -coated PT 100 probe or TC/J thermocouple positioned on the descending supply cable. Dimensions N and C are tailor made.

When ordering state : PTFE immersion heater : Type :Model : - Frame in : PVDF or PP
Power (kW) : - Voltage (V) : - Dimension N (mm) : - Dimension C (mm) : - Dimension H (mm) :
IMPORTANT : Dimension N is the length of cable between the heating element and the connection. It must be long enough for the connector to be clear of vapour.

Polytetrafluoroethylene (PTFE) is a fluoropolymer. Other polymers with similar composition are known under the Teflon name: **Fluorinated ethylene-propylene (FEP)** and **perfluoroalkoxy polymer resin (PFA)**. They retain the useful properties of PTFE.
Polypropylene (PP) is a thermoplastic polymer.

CYLINDRICAL PTFE IMMERSION HEATERS

G	9000 W	400 Tri	1200	120
H	12000 W	400 Tri	1395	120

IMPORTANT : The heating area must be covered by at least 20 cm of liquid.

TEFLON® COATED PT100 PROBES

These probes mounted on a holder in PVDF are an essential accessory for the PTFE immersion heaters. Designed to be mounted on the tank edge. They allow to measure the temperature of the heated fluid. Several models are available to fit on different tanks. Connection leads : 1m.

P/N.	L (m)
31170-01	0,5
31170-02	1,0
31170-03	1,5
31170-04	2,0

RIGID TEMPERATURE PROBES

Thermocouples or PT100 Teflon coated probes mounted on plunger with a sealing gland in PVDF or in PP. Standard length 0,5 m available up to 5m. Connection leads : 1m.

P/N.	Plonger material	Type of probe
31981-02	PVDF	Pt 100 ohms - 3 wires
31981-04	PVDF	TC/J
31981-05	PVDF	TC/K
31981-07	PP	Pt 100 ohms - 3 wires
31981-09	PP	TC/J
31981-10	PP	TC/K

R	12000 W	400 Tri	585	785
S	12000 W	400 Tri	425	800

Dimensions **N**, **C** and **X** are made to order :

X = height of immersion heater fixing arms on tank edge < height of tank.

N = Length of supply cable descending into tank.

This dimension must be large enough for the connector to be clear of vapour.

C = Length of electric supply cable.

Caution : Frame size = (J + 100) x (K + 100)

When ordering state :

PTFE immersion heater : Type : 26450/453/460/463/472/474/482 or 484

Model : - Frame in : PVDF or PP

Coating : FEP (1 coat) or PFA (2 coats)

Power (kW) : - Voltage (V):

Dimension **N** (mm) : - Dimension **C** (mm): - Dimension **X** (mm):

Application : horizontal or vertical.

IMPORTANT : Dimension **N** is the length of cable between the heating element and the connection. It must be long enough for the connector to be clear of vapour.

For horizontal fitting, add feet : in PVDF , **P/N. 26450-03**,
in PP **P/N. 26450-53**.

Accessories :

- Outdoor frame bracket in PVDF. P/N. **26450.01**, in PP P/N. **26450-51**
- 4 feet, height 100 mm, in PVDF. P/N. **26450-03**, in PP P/N. **26450-53**

Needed for horizontal fitting as tank bottom heater

- Protective grid in PP. Type 26452 +type code (A, B, C ...)
- Teflon® -coated temperature probe Pt100, length 8 m. P/N. **26216-01** (see section " Temperature probes")
- Pt 100 temperature probe, fixing to immersion heater, length 1,5 m P/N. **26250-98**, length 3,5 m P/N. **26450-97**
- TC J probe, fixing to immersion heater : length 1,5 m P/N. **26250-97** length 3,5 m P/N. **26450-95**

Polytetrafluoroethylene (PTFE) is a fluoropolymer. Other polymers with similar composition are known under the Teflon name: **Fluorinated ethylene-propylene (FEP)** and **perfluoroalkoxy polymer resin (PFA)**. They retain the useful properties of PTFE. **Polypropylene (PP)** is a thermoplastic polymer.

FLUID CIRCULATION HEATERS

These appliances are used to heat circulating fluids such as water, fuel oil, as well as air or gases in general at up to 15 bar max. They are fitted with a screw plug immersion heater and a safety thermostat. Fluid circulation heaters can be connected hydraulically in series, which allows a very large heating power to be achieved.

ALL COMPONENTS FROM ONE SOURCE.

Circulating liquid heaters must be driven by a control system which is independent from the safety system and measures the fluid output temperature.

DN 20 TO DN 40 LOW FLOW FLUID INLINE HEATERS

Appliances conform to DESP 97/23/CE article 3 § 3.

To heat air, water or oil in open or closed circuits, at a maximum pressure of 10 bar.

Vessel in stainless steel AISI 316L/Din 1.4044 with BSP threaded inlet/ outlet. With cartridge in stainless steel (AISI 321/Din 1.4541), fitted with type K thermocouple.

The heaters are to be installed in series on rigid pipework. No other fixing needed for connecting the heater to the pipework.

For fluid output temperatures > 60°C, thermal insulation is needed.

AVAILABLE IN 3 VERSIONS :

- Connection by leads, without temperature sensor
- With connection box and PT100 temperature sensor
- With connection box and TC/J temperature sensor

* Pressure loss depends according to the fluid on the flow, the viscosity and the gas pressure - Consult us

**For Iso VG 32 oil.

Control unit for these heaters (see section control units):

Power control ready to use, for power supply and temperature control panels of low flow heaters

Fitted with a main controller with inputs for Pt100, TC/J or TC/K, and a safety controller with TC/K input, which guarantees protection against element damage due to overheating.

P/N.	Max. power(kW)	Input	Controller	Power unit	Temperature Range
32045-54	5	TC/J	PID	Static relay	0/400°C
32045-55	5	PT100	PID	Static relay	0/300°C

The model with TC/J input can be configured on site in a TC/K input.

DN 50 LIQUID CIRCULATION HEATERS

Appliances conform to DESP 97/23/CE article 3 § 3.

To heat water, fuel or oil circulating in pipework up to 15 bar max. These heaters are made of one or two DN 50 vessels in painted carbon steel, M45 screw plug immersion heaters, and a safety thermostat with automatic reset fixed at up to 115°C, or adjustable from 0°C to 300°C.

Horizontal wall mounting by an adjustable supports supplied with Non-insulated models (optional wall brackets not fixed to insulated models).

Voltage: 230/400 V 3P.

Swivelling box IP55.

* SP= scoured and passivated

Non-insulated 2 vessels circulating heater

Single vessel circulating HEATERS

Heaters for **recycled or waste water** up to 110°C max., 15 bar. Fitted with nickel-plated copper heating elements, brazed brass screw plug. Min. flow 1 m³/h.

P/N. without insulation	P/N. with insulation	Power +5 /-10%	Load (W/cm²)	Control box P/N.	LN (mm)	Spare element	Weight without/with insulation (kg)

Non-insulated models

Insulated models

Heater with offset for vessel temperature > 110°C

FLUID CIRCULATION HEATERS

DN 80 LIQUID CIRCULATION HEATERS FOR DOMESTIC WATER

Consisting of a DN 80 vessel in painted steel, a VULCALOY® flanged immersion heater with a 115°C safety thermostat with automatic reset.

To heat waste or recycled domestic water, circulating in pipework, up to 110°C max. and up to 10 bar.

The heating elements are in AISI 904L/ Din 1.4539 stainless steel which is particularly resistant to scale formation and corrosion. Load 12 W/cm².

Non-insulated models

Insulated models

Non-insulated models

Insulated models

Appliances conform to DESP 97/23/CE article 3 § 3.

AIR AND GAS CIRCULATION HEATERS

Spare thermostat P/N 9031-01

Designed to heat air or nitrogen up to 150°C, up to 15 bar maximum pressure.

Consisting of a DN 80 vessel in painted steel, Ø 77 screw plug immersion heater and a 300°C adjustable safety thermostat. Stainless steel heating elements. Wall mounting by means of adjustable supports.

Supply voltage : 10901-03 : 400 V 1P

10901-06 and -07 : 230 V 1P or 3P or 400 V 3P.

Inlet temperature : min. +5°C, max. 110°C.

Spare parts :

- Type 2077 immersion heaters : see 'immersion heaters' section.
- 300°C adjustable safety thermostat P/N. 9032-01 (Weight 1 kg).

WALL MOUNTING BRACKETS FOR DN 50 and DN 80 HEATERS

- Pair of wall brackets for insulated heater P/N. 6048-01

FLUID CIRCULATION HEATERS

ND80 LIQUID CIRCULATION HEATERS

According PED 97/23/CE article 3.3.

To heat water, fuel or oil circulating in pipework at 15 bar max. Consisting of 1, 2 or 4 DN 80 vessels, in painted carbon steel, M77 screw plug immersion heaters and a safety thermostat with automatic reset, set at 115°C for water and adjustable between 0° and 300°C for oil. Horizontal wall mounting by adjustable brackets (non-insulated models). SP* = Scoured and passived

SINGLE VESSEL

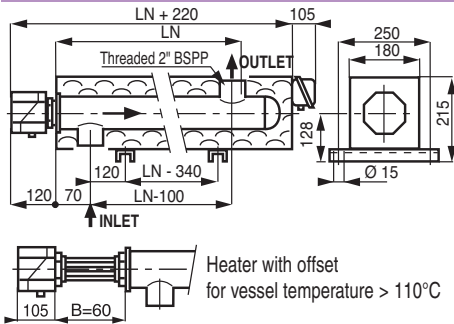

DOUBLE VESSEL

FOUR VESSEL

Non-insulated models

Insulated models

SINGLE VESSEL

Heaters for recycled or waste water up to 110°C, 15 bar. Nickel-plated copper heating elements, brazed brass screw plugs. Load 8 W/cm². Min. flow 2 m³/h. **Painted carbon steel vessel.**

Painted carbon steel vessel.

Liquid circulation heaters must be controlled by a system which is independent from the safety system and measures the fluid output temperature.

Heater with offset immersion heaters for vessel temperature > 110°C

ND 80 CIRCULATING LIQUID HEATERS WITH ND 80 FLANGE (in and outlet)

To heat circulating water, fuel or oil. Made of a ND 80 vessel in painted carbon steel or stainless steel AISI 316L/Din 1.4404, insulated or Non-insulated, DN 80 PN16 FS inlet and outlet, a ND 80 flange immersion heater, and a safety thermostat with automatic reset, adjustable between 0°C and 300°C. Fitted with a 1/4" BSP threaded thermowell on the outlet pipe, for a control sensor.

ON REQUEST

HEATING HOSES TYPE 26177

FLEXIBLE HEATING PIPE TYPE 26177

To maintain the temperature of liquids or gases between 5°C to 350°C (for special models in stainless steel) up to 200 bar during routing from the heating system to the point of use, or for keeping them free from freezing.

Application areas : foam bitumen, glue, oil, greases, wax, resin, paint, process gas, food products, molten metals....

Protection of certain liquids against freezing.

Protection of certain gases against condensation.

Link between fixed and mobile installations.

Control of viscous product pouring capability.

Special models of heating hose

ADVANTAGES :

These pipes are extremely flexible and can be installed quickly and easily. Even distribution of temperature.

Quality materials in contact with fluid (usable for food and pharmaceutical industries).

Surface temperature control to guarantee long life duration.

Min. bend radius = 12 x Nominal Ø

COMPOSITION :

Smooth PTFE flexible pipe or corrugated AISI 321/ Din 1.4541 stainless steel with external braid of AISI 304 / Din 1.4301 stainless steel fitted with end coupling of steel, protected, or of AISI 304 / Din 1.4301 stainless steel. Resistive wire, spiral wound and held by a glass woven tape. Heat insulation adapted to conditions of use, in ceramic fiber or silicone foam, lined with end pieces in molded plastic .

Surface temperature sensor type PT 100 (3 wires) or thermocouple (J, K) placed in the heating part (on the electrical connection side).

Electric connection at one end, by sealed PTFE flexible wires grouped together in a silicone glass silk sheath (maximum temperature 250°C).

MADE-TO-MEASURE HEATING HOSES

Sectional drawing of a heating hose

CHARACTERISTICS :

Inside nominal diameters (mm) : **ND 6 to ND 25.**
 Interior lining of PTFE (200°C max. or stainless steel of about 350°C max.).
 Exterior lining tolerating 170°C max.
 Minimum of the neutral fiber curve radius : 20 x ND (mm) for PTFE and 16 x ND (mm) for stainless steel.
 Length between ends : from **0,5 to 25 meters.**
 Tolerance on Length = +/- 2%.
 Standard power supply voltage : 230 VAC 1 P
 Maximum power : 3600 W.
 Dielectric strength : 1800 V. Insulation resistance : 100 Megohms.
 Power supply cable length : 0,5 m to 5 m.

Nominal Diameter ND (mm)	6	8	10	13	16	20	25
Recommended linear power (W/m) per 100°C(*) for Δ-t	60	70	80	100	110	135	170
PTFE flexible line for 200°C maxi :							
Interior diameter (mm)	6	7	9,1	10	15	18	24
Exterior diameter (mm)	34	42	42	42	50	50	50
Max pressure at 200°C (bar)	156	130	123	97	71	52	36
Stainless steel flexible line for 350°C maxi :							
Interior diameter (mm)			10,5	13	16	19	25
Exterior diameter (mm)			43	50	50	50	50
Max pressure at 350°C (bar)			53	51	49	36	30

CONDITIONS OF USE :

The linear power of a standardised flexible pipe type 26177 will not allow the fluid temperature to be raised but only compensate for losses through the heat insulation. Connect the measurement probes to a regulator or an electronic thermostat capable of maintaining the temperature at the surface of the flexible hose to the maximum set point accepted by the sheath and the liquid being conveyed.
 It is preferable to position the power supply cable on the stationary coupling side.
 Avoid excessive mechanical stresses (compression, traction and twisting).

OTHER MANUFACTURING POSSIBILITIES :

Other diameters : 5, 32, 38 and 50 mm and other lengths (up to 100 m).
 Other power supply voltages from 24 to 230 VAC.
 Power levels greater than 3600 W for 230 VAC.
 Other temperature sensors.
 Higher service pressures, smaller curve radius.
 Stainless steel external corrugated braid or sheath for strength and mechanical protection.
 Other hydraulic coupling : male, bent, flanges, clamps, all will be in AISI 316L/ Din 1.4404 stainless steel.
 Electric connection by plug-in connector.
 Flexible hoses of PTFE without end coupling for over-heating without pressure over smooth piping.
 Heated flexible pipes for use in explosive atmosphere (ATEX zone 1).
 Multiple flexible pipes for the transport of several components.
 Self-limiting flexible hoses for low temperature applications.

To order a made-to-measure heating hose please state:

Heating hose type: 26177	- Application :	
- Inside diameter (mm):	- Hose length (m) :	- Max. pressure (bar) :

Radiators

ATEX radiators

Wall-mounted air heaters

High temperature generators

Circular air duct heaters

Industrial air duct heaters

Flange air heaters

TWISTED FINNED ELEMENTS

To heat air or gases by natural or forced convection, one possible solution are finned elements.

Heat transfer from tubular heating elements for heating gaseous media is increased by a metal strip wrapped around the element. Through turbulence created in the medium, finned elements can be loaded up to 2 or 3 times more than unfinned elements. With lower surface temperatures and smaller dimensions, finned elements are particularly suitable for convection heating, air heaters, industrial ovens, drying cabinets, paint-drying installations, air-conditioning appliances, etc.

AVAILABLE SHAPES :

- Fig.1 – straight, completely finned
- Fig.2 - U-shaped, completely finned
- Fig.3 - U-form, bent area not finned
- Fig.4 - W-shaped, completely finned

STAINLESS STEEL FINNED ELEMENTS

Temperatures up to 300°C, min.air speed 5 m/s.

Supply voltage: 230 V single phase.

Supplied bent, with crimped M 14 x 1,5 x 12 mm threaded plugs.

AISI 321/Din 1.4541 tube,

AISI 304L/Din 1.4306 fins,

Crimped M14 x 150 threaded plugs in protected carbon steel (max. pressure : 100 mm WC) + sealing rings,

M6 threaded terminals in protected carbon steel,

TM seals (max. connection temperature : 200 °C).

NH = Non-heating length

FINNED STRIP HEATERS

To heat air or gases by natural or forced convection, one possible solution are finned element. The required power, operating temperature, and flow speed of the gas to be heated will guide you in choosing your specific item.

VULCANIC finned elements are based on sheathed heating elements to which fins are attached. These square-finned elements are available in U-shaped form.

Fins in ferric or austenitic stainless steel

Protected carbon steel max. tube temperature 400°C
stainless steel max. tube temperature 650°C

Threaded plugs in steel or stainless steel, crimped or brazed depending on pressure and type of gas to be heated

Surface load as standard up to 5,5 W/cm² higher Loads on request

Terminals : threaded, flat, hexagonal, Faston or cables

Application :

Natural convection

Ambient air temp. maxi	Load maxi.
80°C	5W/Cm ²
140°C	4W/Cm ²
200°C	2,7W/Cm ²

Forced convection for ambient air at 200°C Maxi

Low flow	Load maxi.
2m/s	4W/Cm ²
3m/s	5W/Cm ²

STAINLESS STEEL 25 x 50 FINNED STRIP HEATERS

AISI 321/Din 1.4541 tube, 25x50 fins in AISI 430, crimped M14 x 150 threaded plugs in protected steel (max. pressure : 100 mm WC + sealing rings, M6 threaded terminals in protected carbon steel, WP⁺ "waterproof" sealing (max. temperature at terminals : 160 °C).

OTHER MANUFACTURING OPTIONS WITH SHORT DELIVERY TIMES : power, voltage, length of element (Dimension A), tube material (AISI 316L/Din 1.4404), fin material (stainless steel AISI 304L/Din 1.4306), threaded plug material (stainless steel) and their means of fastening to the tube (brazed for 50 bar max. pressure), seals (HT "high temperature" or TM "moderated temperature" and terminals (cables, flat terminals, hexagonal terminals, Faston terminals or threaded stainless steel terminals).

ACCESSORIES

For Finned strip heaters 25 x 50

- IP 55 IK5 polyamid connection box equipped with sealing gland ISO 20 - Max using temperature: 120°C - P/N. 6004-99 (Weight 0.4 kg).
- Pair of protected steel brackets for horizontal use P/N : 6004-81 . (Weight 0.22 kg).

For Finned strip heaters 40 x 80

- IP 55 IK5 polyamid connection box equipped with sealing gland ISO 20 BIS - Max using temperature: 120°C P/N 6013-99 (Weight 0.4 kg).
- Pair of protected steel brackets for horizontal use P/N 6002-81 (Weight 0.22 kg).

ANTI-CONDENSATION CABINET HEATERS

SWITCH CABINET HEATERS

Heaters with integral thermostat for warming electrical switch cabinets. Made of one or two finned strip heaters mounted in a polyamide 6/6 box, with IP42 cover, 0/120°C thermostat in a thermowell, mounted on two brackets, with ISO 25 gland. Same characteristics as stainless steel 25x50 finned strip heaters type 6004.

Version with 1 finned strip heater

ATEX ENCLOSURES HEATERS - Ex e

These extra flat heaters (20 mm) are designed for electrical cabinets. Consist in stainless steel (316L) frames containing a self regulating cable, ATEX certified, allows a high level of frost protection and prevents the condensation of moisture. They can be fitted in all positions and are vibration resistant.

ATEX marking: 2 GD Ex e II C T 3 Gb and II 2 GD Ex e II C T 6 Gb

Certificate: **LCIE 13 ATEX 3091**

Hygrostat or ATEX thermostat controlled (option)

ANTI-CONDENSATION CABINET HEATERS

Heaters to keep wiring or switch cabinets free of frost, or to prevent condensation from forming in electric cabinet. Finned aluminium elements with safety thermostat to limit the surface temperature to 70°C.

Fitted with 3-cores 0,75m² supply cable, length 0.3m.

Can be mounted on 35mm DIN rails.

Voltage : 230 V single phase.

RADIATORS

RADIATORS

The thermostat setting knob is located on the outside of the unit.

Steel radiator : Stainless steel heating element, F17 stainless steel fins, housing and support in protected steel, painted aluminium terminal box.

Stainless steel radiator : AISI 321/Din 1.4541 stainless steel heating element, stainless steel fins AISI 304L/Din 1.4305 stainless steel housing and brackets, painted aluminium terminal box.

These particularly robust appliances have been designed to provide reliable heating for industrial and technical premises, control rooms and mobile site cabins. Connection via gland to a IP55 IK7 aluminium terminal box. Available with an integral control thermostat, adjustable from 0 to 50°C. Horizontal fitting.

IP 55 IK 7 connection box for radiators without thermostat and IP 42 IK 7 for radiators with thermostat.
Models 6007.xx and 6103.xx H = 150, l = 90, e 2 = 68, e1=L - 70 (without thermostat), e1=L - 105 (with thermostat)

Spare thermostat : **P/N. 6099-01**

Models 6008.xx and 6104.xx H = 200 , l = 165, e 1 = L - 85, e 2 = 136 Spare thermostat: **P/N. 6099-02**

Power supply : Type 6007-xx and 6103-xx : 230V 1P

Type 6008-xx and 6104-xx : supplied coupled 400V 3P - possibility of coupling 230V 1P (except 4500W) and 230V 3P.

Other manufacturing options : special powers and voltages

RADIATORS FOR PUBLIC PREMISES

Low surface temperature suitable for public premises (reception halls, shops, waiting rooms, etc.)
Certified Class A by VERITAS (provided the appliances are wall-mounted) for use in merchant navy ships. Include a safety thermostat with manual reset and no control thermostat. Connection via gland to a IP 55 IK7 box in black anodised aluminium. Supplied with a set of brackets 6008-20 (see accessories for radiators). Supply voltage : 230 V 1P. Max. surface temperature on the housing : 85°C at an ambient temperature of 25°C.

ATEX RADIATORS WITHOUT CONTROL THERMOSTAT - Ex d

Room radiator ATEX 94/9/CE certified, for heating of ATEX hazardous atmospheres (ambient temperature from -20°C up to 40°C, maximum humidity 95%)- Built with a set of **heating pins ø 16 mm** mounted in a coated steel housing.

- Aluminium junction box IP 55 IK 7 with cable gland .
- **Explosion-proof equipment** of category 2 for surface industries usable in risk areas 1 and 2, in gas environment of the group IIC whose temperature of self ignition is higher than 200°C.

We recommend the use of a thermostat allowing an optimal control of ambient temperature in the room :

Atex control thermostat Ex de IIC T6 reference 6023-02.

Special precautions must be taken to ensure a safe and appropriate use of this equipment. Please consult us or read the instruction manual previously.

Atex marking : II 2 G Ex d IIC T3 Gb.
EC type examination certificate :
INERIS 11 ATEX0046

Model Ex d IIC T3 (skin temperature of maxi 200°C on the heating element inside the steel casing with an ambient temperature from -20°C up to +40°C).

FAN AND CONVECTOR HEATERS

FAN HEATERS

Fan heaters for wall mounting, or mounted on castors to heat premises with recirculated air (case in electro-galvanised steel, painted and stove-dried – double layer of thermal insulation). Thermal safety device. protective grille and air deflector. Switch and thermostat on front panel with power on/off switch. Sound level at 1 m = 55 db(A). IP 33. Delivered with pair of wall brackets.

Dimensions : H = 480 mm - L = 400 mm
P = 400 mm (6 kW), 535 mm (12 kW), 670 mm (18 kW).

Accessories :

• Pair of wall brackets in painted sheet steel

P/N. 6046-98 L = 622 (6 -12 kW)

P/N. 6046-99 L = 690 (18 kW)

Mobile wheeled support P/N. 6041-98 (weight 9 kg)

Supply voltage : 400 V 3P.

6046-68	18 kW	1/3 + 2/3	1750	34

Ambient thermostat for remote control of temperature :

P/N. 9014-20 • (see 'thermostats' section)

PORTABLE FAN HEATERS 2 to 15 kW

Portable floor-level fan heaters. Ideal top-up heating for industrial or agricultural sites.

Quick to set up (simply plug in), they can be moved quickly as the need arises.

This range of robust appliances at a competitive price meets the needs of many users while offering a quality technical specification.

2 switchable speeds on all modules : half/ full power switch, and integral blind ambient thermostat adjustable between 0° to 40°C without range.

IP 54.

P/N.	Max. power +5 -10%	Voltage (V)	Air output (m ³ /h)	Weight (kg)

6120-35	350 x 440 x 600

WALL-MOUNTED FAN HEATERS 6 to 15 kW

Perfectly suited for the industrial environment, these fan heaters are designed to heat thermally insulated areas with little air change. In epoxy-coated steel sheet protected by a coat of lacquer, front panel in matt anodised aluminium.

These fan heaters are fitted with an ingenious wall mounting device which allows a choice of three fixing angles.

A 'quick fit' plug allows easy connection to a remote control (see accessories).

6 kW models : 1 heating speed + ventilation only.

9 to 15 kW models : 2 heating speeds + ventilation only.

Protection level : IP34.

Installation :
Minimum distance (mm)

Accessories :

P/N. : 6129-97

Remote digital electronic control allows the connection of a maximum of 6 air-blow heaters to select and see the temperature room (35 °C max), to start up the fan only or to start up the power with the fan together (2 speeds) and select the operating time from 1h to 9 hours.

INDUSTRIAL FAN HEATERS WITHOUT REGULATION

Fan heaters of simple and robust design for heating recirculated air in areas such as workshops, factory shopfloors, warehouses, refectories, sports halls, garages, shops, greenhouse... These appliances are not fitted with any control system. Max. working temperature : 45°C.

Specification of listed models with short delivery time :

Body in protected steel sheet. Stainless steel finned strip heaters (tube in AISI 312/Din 1.4541, fins in Z8 C17). Spiral fan with large blades, and motor (1000 or 1500 rpm, depending on model) with IP55 connection box. Safety thermostat set at 110°C, automatic reset. Connection of two power stages and safety thermostat in an IP30 box with 3 glands (2 for the power stages and 1 for the safety device).

Accessory : Pair of wall fixing brackets : P/N. 6059-01 for 30kW max.power models (Weight : 9 kg).

Other manufacturing options : Power, Voltage, number of stages, body material (stainless steel), sealing of the IP55 terminal box, etc.

CONVECTOR HEATERS

Convector heaters designed for heating houses, offices or technical sites open to the public. They are robust, pleasant to look at, and comply with European standards. Fitted with an on/off switch and an electronic ambient thermostat measuring the temperature at the air entry point, with the option of mechanical locking to a temperature range or to one set temperature. 'Frost guard' position set to approx. 7°C. Supply voltage: 230 V single phase.

P/N.	Power +5 -10%	L (mm)	H (mm)	D (mm)	Weight (kg)
6045-10	1000 W	420	430	83	4,6
6045-15	1500 W	580	430	83	6
6045-20	2000 W	740	430	83	7,6

All these convector heaters are double insulated (class 2) , and can be installed near water draw-off points as defined in regulations.

Electronic ambient air control : see 'thermostats' section.

HOT AIR CURTAINS 3kW

Economical hot air curtains suitable for single doorways. The heater can be wall - or ceiling -mounted at a height between 1,8m and 3m above floor level and a minimum of 300mm from adjacent walls . Hot air curtains set up a thermal barrier between two places of very different temperature. They help to save heating and air-conditioning in the protected area. Mounting kit included.

P/N.	Power +5 -10%	Voltage V	No of stages	LOutput m³/h	Weight (kg)
6122-01	3 kW	230	1	250	7
6122-02	as 6122-01 but with electronic thermostat.				

HOT AIR GENERATORS

HIGH TEMPERATURE HOT AIR GENERATORS

Bare-wire hot air generator. A method of heating dry air. A bare heating wire is in direct contact with the air. This reduces the start-up time of the heater considerably (working temperature is reached in a few seconds) and allows high temperatures to be achieved from a small appliance.

Supplied with or without a suitable blower, the appliance reliably produces the desired result.

Generators can be used in

- an open circuit (sending out hot air) or in a closed circuit (to heat another system via a heat exchanger or a double-skinned casing).
- Closed-circuit models are fitted with fans and an offset motor, so as to withstand a high return temperature. In open-circuit use, we recommend an air filter at the turbine entry, to prolong the life of the heater (by reducing accumulation of dirt, and corrosion of the heater).

Maximum output air temperature for generators : 250°C

Suction fans are designed to operate in open or closed circuit with an air inlet temperature of 160 ° C max

Accessories :

P/N.: 10748-02

Adapters to connect the motor fan type 10748 to "high power" heater type 10757

HOT AIR GENERATORS

These hot air generators are ideal for heating, drying, heat-shrinking or polymerisation.

Designed for industrial use, the AISI 321/Din 1.4541 stainless steel heating element heats air to a maximum of 90°C, propelled by the fan.

The heating part of these appliances is completely insulated.

Two models are available :

- fully equipped model, ready for use with temperature control and safety systems.

The PID controller drives a power unit, allowing a steady, precise output air temperature.

- unregulated model with safety system. A Pt100 ohms probe and a safety thermostat measure the output air temperature. The installer has to add an external control system (controller with Pt 100 input + power unit).

Minimum inlet temperature: 10°C.

Maximum outlet temperature: 90°C.

P/N.	Power +5 -10%	Voltage (V)	Regulator
10712-01	700 W	230 1P	Yes
10712-51	700 W	230 1P	No

Ø of outlet pipework : 50 mm (about)

Temperature rise is inversely proportional to output, which depends upon pressure loss in the receiver (tube + nozzle installed by the user).

Temperature rise inlet / outlet (°C)	80	70	60	50	45	40
Air output (m ³ /h)	23	26	30	37	41	46
Pressure loss in receiver (mm of CE)	90	85	70	50	25	0

To increase the air outlet temperature, it is therefore sometimes necessary to reduce the diameter of the outlet pipework.

PORTABLE HOT AIR GENERATORS

Portable equipment for heating and drying various parts, treatment of heat shrink to achieve bonding and welding of plastics.

Continuous adjustment using an electronic mounted in the handle

Supply voltage: 230 V 1P.

Power wire length = 3 m.

P/N 6042-02

P/N 6042-03

P/N.	Power +5 -10%	Length (mm)	Air output (l/min)	Temp. (°C)	Weight (kg)
6042-02	3400 W	320	500 maxi	+20/+650	1,5
6042-03	1600 W	340	230 maxi	+20/+700	1,3

CIRCULAR AIR DUCT HEATERS

AIR HEATERS FOR CIRCULAR DUCTS

Electric duct heaters, for heating air to approx. 40°C in round air-conditioning ducts (diameter from 125 to 630mm) to a maximum pressure of 100mm WC and a minimum air speed of 2 m/s. Tubular sheathed elements stainless steel tube AISI 321/Din1.4541 in flat panel shape, mounted on an IP 30 cover in galvanised steel sheet.

2 sealing glands ISO 16 and ISO 20 Bis.

Supply voltage : 230 V 1P, 230 V 3P, 400 V 3Pi

In accordance with coupling and power selected.

Equipped with temperature limiter, bimetallic expansion type, with automatic reset preset to 90°C

Options :

- Stainless steel vessel.
 - Temperature limiter, bimetallic expansion type, with manual reset preset to 120°C
 - 2 temperature limiters, bimetallic expansion type, for air temperature alarms with 1 manual reset preset to 120°C and other one automatic reset preset to 90°C
- Diameter up to 600 mm-Power up to 27 kW with Longer length

Standard models (supplied with **connecting clips**) :

- 3 phases** : Main power in 3 phases, Duct heater with 3 heating elements in 230V..

RECTANGULAR AIR DUCT HEATERS

CENTRIFUGAL FANS FOR CIRCULAR DUCTS

Range of very compact fans (in galvanised steel) for round ducts. They can be installed at any point along a duct. IP 44.
They connect directly to standard ducting. Easy assembly and dismantling by means of fixing clamps supplied.
Supply voltage : 230 V 1P 50 Hz.

*Output to free air, with zero pressure loss

AIR DUCT HEATERS FOR RECTANGULAR DUCTS

Electric duct heater, for heating air to approx. 40 °C in rectangular ventilation ducts, with a maximum pressure of 100 mm WC and a minimum air flow speed of 2 m/s. These appliances are made of stainless steel finned strip heaters type 6004 (25 x 50) for model 6051 or type 6013 (40 x 80) for model 6052, mounted on a base plate with an IP 30 IK 7 cover in galvanised steel.
- a 90/100 °C safety thermostat with automatic reset.
- 3 entry points for cable, diameter 5 to 20 mm.
Wiring for 1 or 2 heating stages depending on model.
Supply voltage : 230 V 1P, 230 V 3P or 400 V 3P depending on connection and power required.
For large heaters, reinforce the internal edges with metal strips.

Model with 25 x 50 fins
Type 6051

Model with 40 x 80 fins :
Type 6052

Shallow duct fixing

Tall duct fixing

Appliances in stock :

Supplied unwired with instruction sheet and connection device allowing various combinations of power and voltage. Element voltage 230V 1P.

RECTANGULAR AIR DUCT HEATERS APPLICATIONS

Rectangular duct heaters offer a means of raising the temperature of air duct in circulation and are used in industrial processes or in building air-conditioning applications.

When the circuit is closed (recycled air), the temperature rise generated by the rectangular duct heater is limited to a few degrees.

When the circuit is open (lost air), this rise can be up to 400°C.

DEFINING YOUR RECTANGULAR AIR DUCT HEATER

Our standardised duct heaters are designed for heating dry or slightly humid, clean or slightly polluted air at a maximum pressure of 100 mm head. If our standardised duct heaters do not have all the criteria required for your application, we will build one specially for you.

List of main parameters needed to define a duct heater

- 1 – Rectangular duct heater model case drawer
- 2 – Quality of air to be heated dry air slightly damp there air not polluted
 air slightly polluted
- 3 – Air circulation : lost air recycled air
 recycled air with fresh air inlet temperature

4 – Min. air inlet temperature : _____ Maxi air outlet temperature : _____

5 – Nominal air flow (specifying the unit, m³/h, Nm³/h, kg/h...) : _____

6 – Duct heater power (W) : _____

If you do not know the power to be installed, the following formula will help you to determine it, mainly for open circuit (lost air) applications :

$$P = 0,349 \times Mq \times \Delta t$$

P = Power to be installed in W (allowing for a safety factor of 1,2)

Mq = Mass flowrate (kg/h) = flow volume (m³/h) x mass volume at desired temperature (kg/m³)

Δt = temperature rise between inlet and outlet of rectangular duct heater in °C

In case of closed circuit operation (lost air), although the same formula applies identically, the temperature rise is gradual and not in one go. When Δt is not known, to estimate the power to be installed, it is necessary to take the following parameters into consideration : specific calorific losses of enclosure, volume of air and mass of rooms to be heated, temperature rise time etc. ...

7 – Number of power stages : _____

8 – Power supply voltage (specify single phase or three phase) : _____

9 – Air passage section (Width in mm x height in mm) : _____

_____ depth if required (mm) : _____

10 – Maximum operating pressure (while specifying the unit : mm de WC, Pa, mBar...) :

11 – Maximum permissible load losses in battery :

12 – Material of housing : protected steel
 304L Stainless steel

13 – Tightness of the battery case : IP 55 IP 30

IDENTIFICATION OF THE RECTANGULAR DUCT HEATER MODELS BY TYPE NUMBER

Operating temperature	dry air	slightly damp or polluted air
temp. ≤ 110°C	6531/6532	6533/6096
110°C < temp. ≤ 200°C	6534	6534
110°C < temp. ≤ 300°C	6097	6097
Temp. > 300°C	consult us	consult us

Note : Compact rectangular duct heater type 6096 and 6097 have a high-power/ volume ratio.

The particular positioning of the heating elements considerably improves thermal exchanges.

RECTANGULAR AIR DUCT HEATERS

All our standard rectangular duct heaters have a safety thermostat with automatic reset in a thermowell, a stuffing box per power stage and a stuffing box for the safety thermostat. Customer electric connection is directly to the coupling bars of the heating elements except for the 6096 and 6097 models of high-power levels where connection is to a terminal block. Boxed models can be mounted in a horizontal or vertical airflow duct. The drawer type rectangular duct heater can be assembled preferably with the heating elements in the vertical position. The attaching flanges of the boxed rectangular duct heater and drawers rectangular duct heater on supporting plate are not drilled. Counter drilling will be performed on site. All our models have a protected steel or stainless steel carcass.

RECTANGULAR AND FLANGE AIR DUCT HEATERS

RECTANGULAR AIR DUCT HEATERS

Tubular heating elements diameter 10,2 mm, material AISI 316 L / DIN 1.4404

Inlet / Outlet flange : Form F flanges, DN 100 or 150, PN 10

Metric threaded cable entry glands.

Cover : IP 52

Supply voltage 230/400 V

2 sensor thermowells, diameter 7,5 x 0,5 mm (material 1.4435), one connected to the heating element by a heat-transfer bridge

Max. working pressure 0,02 bar

All materials without certificate

Max. output temperature without cooling stretch(KS), 80 °C (T> 80 °C only with cooling stretch).

SOLIDS HEATING

Vulstar® cartridges

High-power heating rods

Ceramic core elements

Strip heaters

PTC resistors

Band heaters

Heat tracing

Accessories for heat tracing

Silicone heating panels

Infrared generators

APPLICATIONS

Vulstar® cartridges are used to heat metal like moulds, dies, plates and bolts or liquid. They can be provided with a thermocouple.

VULSTAR® cartridge with thermocouple

VULSTAR® must be inserted in a drilling with an H7 allowance, pre-lubricated with an anti-corrosion product to facilitate installation and removal. Where possible, this drilling must be extended by a hole through the other side for insertion of an extractor. Length L must be fully in contact with the medium to be heated. The high heat flow of VULSTAR® cartridges requires efficient temperature control with a probe (usually a J- or K-type thermocouple) installed close to the heating section.

Mould

hotplates

shaping dies

heat sealing

Marking appliances

band heaters

liquid heating

bolt heaters

Supply voltage up to 450 V 1P or 3P.
Load up to 40 W/cm².
Length from 25 mm to 2500 mm depending on diameter.
Diameter from 6,35 mm (1/4") up to 31,8 mm (2" 1/4).
Different types of connection to fit with the ambient temperature.

NH=Non Heating length

Compliance with VDE standards.

Connecting leads

Standard length S = 350mm.

2 flexible braided nickel leads, silicone-coated glass fibre insulation (max. temperature 350°C).

2 flexible braided nickel leads, kapton insulation (max. temperature 400°C).

Lc = Heating length

Fitting devices

Reversed plug

Plug

Fixed stop

Different types of seals

WP+ (WaterProof Plus): For connection temperature up to 160°C.

MT (Medium Temperature): Sealed for connection temperature up to 220°C in low pollution environments with low humidity and no sudden temperature changes.

HT (High Temperature): Most frequently used. Non-waterproof seal for connection temperature up to 350°C, in a humidity-free atmosphere

Protection of connecting leads

2 flexible NSV or KPT leads, mechanically protected by a flexible metal sheath attached axially.

2 flexible braided nickel leads, thermally protected by ceramic beads (max. temperature 450°C).

GMAL

2 flexible NSV or KPT leads, mechanically protected by a flexible metal sheath attached radially.

SEALED

One 3-core cable, encased in resin to ensure a watertight connection.

HIGH LOAD VULSTAR® CARTRIDGES

High load VULSTAR® cartridges are especially suitable where space is at a minimum.

Cartridges in AISI 321/Din 1.4541 stainless steel. Filled with high-temperature (HT), non-watertight thermal cement.

Supply voltage 230V 1 P.

2 flexible braided nickel leads with silicone-coated fiber glass insulation (max. connection temperature 350°C).

Tolerance on length : 2,5 mm min.

LOW LOAD VULSTAR® CARTRIDGES

These AISI 321/ Din 1.4541 stainless steel or brass heaters, with loads between 2 and 3,7 W/cm², offer a good solution for heating metal blocks and small containers to a temperature not exceeding 300°C (350°C for stainless steel models)

Sealing = HT

Supply voltage 230 V 1 P.

Flexible nickel braid leads with glass fiber isolation (bending possible; min. E = 15 mm).

Tolerance on length : 0/ -2,5 % min. of 2,5 mm.

P/N.	Power +5 -10%	Ø (mm)	L (mm)	Material	Weight (kg)

VULSTAR® MEDIUM LOAD CARTRIDGES

These cartridges have a very wide range of applications. Their 7 W/cm² load and their high temperature resistance (700°C on the sheath surface) allow a fast heating of metal blocks and small containers. The connection temperature must not exceed 300°C. Sealing = HT
Supply voltage 230 V 1 P.
Nickel braid leads with glass fiber isolation, length 350mm
Bending possible : min. 40mm

EXTRA-LONG VULSTAR® CARTRIDGES

To heat liquids or solids over great lengths. They are made of AISI 321 /Din 1.4544 or AISI 316L / Din 1.4406 stainless steel tube and loads up to 16 W/cm². Fixing devices available on request.

Diameter tolerance
1021 : ± 0,1 mm
1024 : -0,02 / -0,12 mm

Models listed below are made of AISI 321 / Din 1.4541 tube allowing a surface temperature up to 750°C, with copper braid leads 350 mm, waterproof seals (connection temperature up to 160°C). They are fitted with J- or K-type thermocouple (diameter 1mm).

HIGH POWER HEATING RODS

For heating liquids by forced convection from -200°C to 800°C with loads up to 100 W/cm². These heating rods are generally equipped with a thermowell inside the internal tube. AISI 316 L / Din1.4404 or AISI 321 / Din 1;4541 stainless steel tube. The tube surface is either smooth or corrugated to optimise exchange. Outside diameter 19 mm +0,15 /+0.0mm.

ON REQUEST

ELECTRICAL BOXES FOR CARTRIDGE HEATERS

Electrical box for VULSTAR® cartridge in a drilling, P/N. 1092-01

Allows sealed connections.
includes : Ø 80mm cast iron cover
- ISO 16 bis gland n°
- 10A ceramic connection block,
- 59 x 46 gasket,

Electrical box for VULSTAR® cartridge in a thermowell, P/N. 9625-01

Allows sealed connections.
Includes : Ø 41 mm cover,
- 1 flange to be brazed on the tube
(max. Ø 30mm)

HIGH TEMPERATURE LUBRICANT PASTE AND SPRAY CANS

P/N.	Operating temperature	Weight (kg)
1026-01	solid above 200°C	0,180/ 400ml

P/N.	Operating temperature	Weight (kg)
1050-01	-30/+1200°C	0,06

Dry lubrication from 200°C upwards, resists up to 1200°C

ADVANTAGES / APPLICATIONS

- Good lubrication of parts subjected to sliding or rolling friction.
- Simplifies installation of pressed or screwed assemblies.

- Good protection against static friction.
- Allows dismantling of screwed or jointed assemblies without binding.

CERAMIC CORE ELEMENTS

For heating liquids (when mounted in a pocket) or solids up to 450°C (load : 2,5 W/cm²) when fitted into a drilling.

Comprises coils of resistive wire inside a cylindrical ceramic core. Connection by threaded terminals on a shouldered spigot.

A=25 for CCE Ø47
A=35 for CCE Ø58

Lc= Heating length

IP 555 polyamide 6/6 cover for CCE Ø 47
P/N. 1199-00 (weight 0,4 kg) with gasket and gland ISO 25 Bis

DISC HEATERS AND STRIP HEATERS

SHEATHED RING HEATERS

To heat circular tank bottoms up to 300°C.

A coil of resistive wire supported by ceramic insulators inside a stainless steel casing.

Loads : 4 to 6 W/cm².

They can equally be used to heat large surfaces by grouping several heaters side by side.

Supply voltage : 230V 1P.

P/N.	Power +5 -10%	Ø (mm)	d (mm)	e (mm)	a (mm)	b (mm)	c (mm)	h (mm)	Weight (kg)

8033-06	2000 W	252	40	18	106	0	41,5	34	1,990

Supply voltage : 230 V 1 P
Connection by Threaded Terminals, Ø 4 (T T 4 for 250 to 500 W) or Ø 7 (T T 7 for 1000 and 2000 W) with protective steatite cap.
T T = Threaded Terminals

SHEATHED MICA STRIP HEATERS

To heat flat surfaces up to 300°C (hotplates, tanks, moulds, tools). Load 4 W/cm².

Must be firmly clamped to the heated surface (along the entire heated length, Lc).

With protective steatite caps.

Supply voltage : 230V 1P.

P/N.	Power +5 -10%	Lt (mm)	H (mm)	Weight (kg)

4027-04	800 W	700	60	0,390

Supply voltage : 230 V 1 P
Connection by Ø 4 threaded terminals

SHEATHED STEATITE-INSULATED STRIP HEATERS

To heat flat surfaces up to 600°C (300°C for models with threaded terminals).

These ceramic-insulated elements have in a stainless steel sheath

Supply voltage : 230V 1P

Nickel Braids with Bead insulation (N B B) depending on power length 500mm.

Connection by Ø 7 Threaded Terminals (T T 7) with protective steatite cap

Hole of fitting for 4033-01 and 4033-02 up to 300°C
Fixing only with 1 hole

PTC RESISTORS AND HEATING PLATES

PTC RESISTORS

PTC resistors combine two technologies: electric heating and temperature limitation. These resistors have a high conductivity at low temperatures, but at a particular value known as the 'Curie bend', their resistance increases considerably. This technology allows automatic temperature limitation independently of the supply voltage.

Economical use, compact, and protected against overheating. According to VDE, CEE, UL, and CSA standards.

Their maximum surface temperature is lower than the 'Curie point', which is set according to the size of the device and the prevalent heat-transfer conditions.

Connecting several PTC elements in parallel allows warm-up time to be reduced without influencing the total power dissipated at the regulation point.

Resistor bare, for fitting in a 'sandwich' of two metal plates. Supply voltage 120 up to 240V. Connection by leads, reinforced along the first 30mm.

P/N.	Nominal Curie point.	Max. power at 230 V	Starting power	Weight (kg)
3941-21	50°C	60 W	240 W	0,01
3941-24	110°C	110 W	460 W	0,01
3941-27	180°C	170 W	520 W	0,01
3941-28	220°C	200 W	660 W	0,01

Flat circular resistor in aluminium sheath with central fixing point. Supply voltage 100 up to 240V. Connection by Two 6,35mm FASTON terminals.

P/N.	Nominal Curie point.	Max. power at 230 V	Starting power	Weight (kg)
3942-41	60°C	150 W	448 W	0,065
3942-43	120°C	270 W	820 W	0,065
3942-44	180°C	170 W	505 W	0,065
3942-45	230°C	200 W	550 W	0,065

Flat rectangular resistor in aluminium sheath, with three fixing holes. Supply voltage 120 up to 240V. Connection by leads, reinforced along the first 50mm.

P/N.	Nominal Curie point.	Max. power at 230 V	Starting power	Weight (kg)
3943-41	60°C	110 W	448 W	0,065
3943-43	120°C	210 W	820 W	0,065
3943-44	180°C	150 W	505 W	0,065
3943-45	230°C	180 W	550 W	0,065
3943-46	270°C	275 W	700 W	0,065

PTC DUCT HEATER FOR AIR

To heat a circulating air flow of up to 165 m³/h approx. in a duct of 100x100 cross-section, with automatic surface temperature limitation.

This modern technology ensures completely safe automatic control of the dissipated power.

Models comply with VDE, UL, and IEC standards.

Dimensions : 120,5 x 107 x 17,5 mm

$\Delta p = 8\text{mm WC for } 165\text{m}^3/\text{h}$

P/N.	Max. surface temp.	Max. power	Starting power	Weight (kg)
3944-01	230°C	1750 W	2400 W	0,22

Connection by FASTON terminals. PTC operating principle described above. Supply voltage : 230 V 1 P.

Air flow in m ³ /h	20	40	60	80	100
Δt input/outlet	120°C	80°C	60°C	50°C	40°C

CAST-IRON PLATES

These rugged cast-iron plates comprise two circuits of sheathed metal tubes encased in cast iron. The outer 1300W circuit and the inner 1100W circuit ensure an even temperature distribution. Several plates can be fitted side by side to make a heating table for foodstuffs or materials, up to 450°C.

P/N.	Power +5 -10%	Weight (kg)
8560-02	2400 W	11

Dimensions (mm) : width 400, height 120, thickness 45. Supply current : 230 V 1 P. Connection by spade terminals.

BAND HEATERS

SEALED MICA BAND HEATERS

Ideally suited for heating cylindrical shapes in damp environments, in the presence of fatty matter, molten plastic, rubber, etc.(350°C maximum). Provided with brass or stainless profile shielding, brazed connection cover and clamping device offering compact overall dimensions.

Power supply voltage: 230 V 1P.

Output is by a flexible metal braid 1 m long protecting the two power supply conductors with one ground wire.

P/N.	Power. +5 -10%	Ø Nom. (mm)	Ø Clamp. (mm)	H (mm)	Weight (kg)
4040-60	100 W	29	28 to 30	25	0,115
4040-61	120 W	29	28 to 30	30	0,120
4040-62	160 W	29	28 to 30	40	0,130
4040-63	135 W	32	31 to 33	30	0,120

4040-65	200 W	35	34 to 38	40	0,135
4040-66	140 W	40	39 to 43	25	0,130
4040-67	170 W	40	39 to 43	30	0,130

MICA BAND HEATERS

These collars resolve all heating problems for cylindrical shapes up to a temperature of 350°C. They are loaded to a maximum of 4W/cm². The heating element is enclosed in a sheet metal structure; the fast coupling system allows easy assembly and disassembly. Power supply voltage: 230 V 1P. Outputs are by M5 or M7 (starting from 350 W) threaded terminals.

Our technical advice :

Taking precautions, it is possible to open Mica collars with diameters ≥ 100 mm. This operation must only be performed once, taking care not to damage the heating part. Finalise tightening when the collar reaches its working temperature. They are delivered without caps.

ARTICULATED CERAMIC BAND HEATERS

Collars allowing the heating of cylindrical shapes up to maximum of 700°C depending on load, consisting of a nickel-chrome resistive wire mounted on steatite elements. These articulated elements make the assembly particularly flexible. Electrical connection is by threaded terminals.

GENERAL MANUFACTURING CHARACTERISTICS

Diameter	: all diameters from 90 mm to 3600 mm
Height	: 32 - 44 - 55 - 78 mm
Power	: depending on the exchange surface (specific load up to 10 W/cm ²)
Voltage	: any voltage up to 400 V
Current	: 4 Min - Max depending on availabilities 60A
Outputs	: Cover and metal duct up to 300°C (without external lagging)
	: Threaded terminals Ø. 7 up to 500°C (without external lagging)
	: Threaded terminals Ø. 7 up to 300°C (without external lagging)
	: Nickels beads for high temperatures

SHEATHED BAND HEATERS

For heating cylindrical shapes up to 450°C in harsh conditions (vibration, humidity, dripping water, etc.) They consist in stainless steel tubular heating element in a flat cylindrical shape, held in place by an external clamping band which acts as a reflector. They have a higher efficiency than mica band heaters.

Supply voltage: 230 V - single phase.

Diameters available (Ø Clamp):

Ø60 to Ø200 mm with sheathed band heaters or symmetrical half-bands depending of your piping (side access only).

Ø > 200 mm solution available on request with symmetrical half-bands. **Bands height : 20 à 120 mm**

Electrical connections available on request

• **Glass fibre sheathing**

Without any information, the standard length of the sheath gains is 1500 mm. Others length available on request: 500, 1000, 2000 mm.

• **Threaded terminals**

• **Electric spit**

• **Flexible metal cover**

Without any information, the standard length of the sheath gains is 1500 mm. Others length available on request: 500, 1000, 2000 mm.

Fibre glass braided insulation					Pipework - Vessel					
Insulated mineral panels					Vessel					

- HVAC** Frost protection and condensate discharge pipes. Glass demisting of refrigerating cabinets.
- Buildings - roads** Frost protection of domestic waters pipe, garages, gardens, roofspaces, and parking areas, loading bays, sprinkler systems, Temperature retention of bitumen for road construction, sanitary water, water protection against legionella.
- Industry - Petrochemical** Temperature maintenance of petrochemical processes, oil and gas pipework, corrosive liquids including in hazardous areas, heating of pharmaceutical and cosmetics products sensitive to cold temperatures.
- Medical care - Food and beverage** Anti-condensation of electrical cabinets, engine start-up, including in hazardous areas temperature retention for gluing processes, polymers mouldings, and food preparations (Chocolates, ...).

TECHNOLOGY

Self regulating (120°C max)

The heating cable core is made with conductive plastic. Two parallel conductive wires distribute the current to a sheath of semi-conductive polymers insulated by an external insulation. The self regulating technology enables you to cross the cables or overlap without any danger. The self regulating cable in combination with an ambient thermostat will be more energy efficient during the winter periods (500 hours / year maxi vs 8700 hours / year without thermostat). **CAUTION:** a C curve circuit breaker must be used.

Operational principle

Self regulating cables performances	Cable Temperature																					
	5	10	15	20	25	30	35	40	45	50	55	60	65	70	75	80	85	90	95	100	105	110 °C

Constant wattage (120°C max)

Constant wattage, no variation of the efficiency, 2 conductive wires are insulated and connected at regular intervals to a coiled resistive element. The constant current is provided between 2 fixed points on the conductive wires (W/m). **Caution:** these cables must be controlled by a thermostat, and their technology doesn't allow any contact by crossing or overlap.

Operational principle

Insulated mineral heating cables (450°C max)

The cable consists of Kumanal conductor insulated by a compacted magnesium oxide and by stainless steel outer sleeve. Through their high power (15 up to 65W/m) and metallic sleeves, these cables with mineral insulation offer optimum heat transfer. They are supplied at set length with a cold section at each end parts and two power supplies terminal. They must be controlled by a thermostat device (see on pages 97-98)

Heating cables with fibre glass braided insulation (900°C max)

The heating cables maintaining a constant power are used to apply a strong concentration of heat within a reduced time and in a dry atmosphere. They are isolated by a fibre glass twine (not waterproof). Powerful, ready for use. Very flexible, these heating cables are only available in defined lengths and must be controlled by a temperature control device.

Why use a thermostat or humidistat with heating cables ?

Heating cables are automatically controlled by a thermostat or humidistat with a set temperature or relative humidity. This will enable their electrical consumption to be reduced and their life extended. (see thermostat and humidistat range for heating cables on pages 97 and 98).

Installation of heating cables on pipes

Power requirements per meter > Heating cable power output:

CONFIGURATION WITH CABLE TWISTED IN SPIRAL

Power requirements per meter ≤ Heating cable power output:

CONFIGURATION WITH CABLE IN LINE

It is best to apply two heating cables in line for a better warm exchange and easy of installation

DIGITAL CONTROL UNIT WITH WATERPROOF JUNCTION BOX IP 66

Description	P/N.
Digital temperature controller under waterproof junction box	9028-01
Sensor PT100 Ohms Ø 4 mm lg= 50 mm Cable lg = 5 m	9028-02

Temperature controller « On/Off », compact, easy to use, suitable to control immersions heaters, heating cables, or silicone heating panels **up to 3,5 kW**.
Controlling a heating power over 3,5 kW requires an installation with an electromechanical relay.

Main specifications:

- Temperature measured, setting point, relay output position are indicated by digits.
- Input temperature PT100 2 wires (-50°C.....+250°C), with long length compensation integrated.
- Message « Err LO/Hi » in case of temperature sensor broken or in short circuit.
- Very easy to configure with push button **temp +/temp-**; setting of hysteresis and short cycle protection.
- Relay output with close contact when temperature measured is lower the set temperature. Breaking capacity 16A/230V single phase.
- Waterproof and transparent casing IP 66. Resistant against shock and vibration.
- Cable glands suitable to supply voltage cables from Ø6 up to 13 mm.

NON ATEX AND ATEX CONTROL THERMOSTATS

AMBIENT AIR CONTROL THERMOSTAT - IP 55

This outdoor control thermostat IP55 allows to reduce energy consumption with the power off or power on of heating cables used for frost protection (self regulating cables) during the winter time (500 hours/year vs 8700 hours/year).

P/N.	Applications	Description
9014-50	<ul style="list-style-type: none"> Outdoor installation. Frost protection of water tanks, pipework, mechanical processes, vessels, and pools.... 	Thermostat range: - 5 up to 30°C Sealable IP 55 cover Change over contact, breaking capacity 10A/250VAC. Normally closed contact Hysteresis 3°C Dimensions: 122x 120x55 mm

CONTROL THERMO-HUMIDISTATS ANTI-CONDENSATION - IP 30

P/N.	Applications	Description
9014-98	Control of a self regulating heating cable by a humidistat (relative humidity HR %) avoids condensation in electrical cabinets, enclosures and rooms.	Humidistat range 35% up to 100% . (HR %) Change over contact, breaking capacity 5A/230VAC . Dimensions: 75x 75x27 mm

P/N.	Applications	Description
9014-99	Control of a self regulating heating cable by a thermo-humidistat (ambient temperature + relative humidity HR %) avoids condensation in electrical cabinets and enclosures and rooms.	Thermo-humidistat range 10 °C up to 35°C – 35% up to 100% . (HR %). Change over contact, breaking capacity 5A/230V (humidistat) Change over contact, breaking capacity 10A/230V (thermostat). Dimensions: 127,5x 75x27 mm

CONTROL THERMOSTATS FOR HEATING CABLES - IP 55

P/N.	P/N spare part thermostat	Range (°C)	Ø bulb (mm)	B (mm)	Capillary length (mm)	Weight (kg)
9014-11	9014-31	+30 / +110	8	90	1000	2
9014-12	9014-32	-20 / +30	8	143	1000	2

Liquid expansion type thermostat for heating cables, in an IP 55 box fitted with fixing lugs on the insulating cover, with copper capillary.
 Single-pole double-throw open contact, breaking capacity 16 A /400 VAC.
 Cable glands: ISO 16 bis and ISO 20 bis.

ATEX CONTROL THERMOSTATS CERTIFIED FOR DUST AND GAS - Ex de - IP 65

Ambiance

Contact/surface

These ATEX thermostats are certified for zone 1 with an ambient temperature from -40°C up to 40°C (T6) or -40°C à +50°C (T4).

Protection: Ex de IIC T6 (T3 on request)

Junction box: IP 65

Dimensions: 122x120x90 mm

Breaking capacity: 10A/230VAC

Atex marking: Ex II 2 G Ex d e IIC T6 Gb or II 2 G Ex d e IIC T4 Gb for hazardous atmospheres

and Ex II 2 D Ex tb IIC T85° Db et II 2 D Ex IIC T130 Db for explosive ambient with conductive dust.

Certificate: EPS 11 ATEX 1 354

HEATING CABLE PREPARATION

Constant wattage

Side joint connection

Locate through the transparent silicone sleeve, the beginning of the heating modules, depending of the desired cold length required. cut the heating cable and push back on the twine 80mm approximately.

Cut the heating cable 50mm approximately and peel back the twine in order to splice it on 15mm long.

Pass the gland over the cable with the use of a screw driver. Undo the twine to obtain the earth wire.

Separate the two wires in the direction of the length with the use of scissors and strip back 15mm approximately.

Cable end

Strip the outer sleeve back 30mm with the help a wire cutter/ stripper, taking care not to damage the insulation of the two conductors located underneath.

Strip the sleeving from the two conductors and cut flat against the isolating sleeve. do not attempt to reconnect them again

Cut one of the two conductors shorter than the other one, to avoid any contact

Fill the sleeve with silicone and slip it over the cable end. Leave to dry before use.

Self regulating

Side joint connection

Pass the gland over the cable. Then cut the sleeve back 150mm approx.

Splice the stainless steel braid.

Strip the outer sleeving taking care not to damage the insulation of the two conductors underneath.

Strip the conductors with a thermal stripper for a few seconds in the black area (zone) semi conductor. This helps to easily strip the conductors with the use of wire stripper/pliers.

Separate the two conductors with insulation tape, then maintain the braiding on the sheath with the use of another piece of insulation tape.

Two thermo retractable sleeves make it possible to insulate the conductors right up to the power connector if necessary.

Cable end

Strip the outer sleeve back 30mm with the use of a cutter/blade. taking care not to damage the insulation of the 2 conductors underneath.

With the use of wire cutters. Cut the end diagonally.

Fill the sleeve with silicone and slip over the cable end. Leave to dry before use.

SILICONE HEATING PANELS

APPLICATIONS

Heating and maintaining temperature of flat, cylindrical or conical components. For use especially when even temperature distribution is required (no hot spot) or when the heating system has to be very compact (thickness: about 4 mm).

Hot vulcanisation of the 2 surfaces = permanently bonded

Heating wires

Cylinder formed during vulcanisation

Connection mould also available with connections within the thickness of the panel.

200°C max.

Load up to 0,7 W/cm² (moreover depending on heat exchange)

Protection code: IP21 - IP55 on request

Ex-stock silicone heating panels have a load of 0,7 W/cm² max

For cable leads within the panel thickness instead of on a mould, consult us.

An excellent way to heat flat surfaces up to 180°C. Rugged, flexible, and compact, silicone heating panels solve many problems of heating or maintaining temperature.

Listed models are available with a self-adhesive surface for permanent fixing, and with Pt100 probes.

Voltage: 230V 1 P.

Length of leads = 500 mm.

⚠ Ensure secure fixing with self-adhesive aluminium tape, P/N. 4550-00

Connection cable on the panel thickness 9 mm approximately

Connection cable on the panel, thickness 9 mm approximately

RECTANGULAR SILICONE HEATING PANELS

P/N.	Shape	Self-adhesive	Power. (W) +5-10%	Voltage (V)	Dim (mm) L x l	Temperature sensor

SILICONE HEATING PANELS WITH LEADS IN THE PANEL THICKNESS

Connection cables in panel thickness, max. thickness 4 mm

Connection cable in panel thickness, max. thickness 4 mm

SILICONE HEATING PANELS

MADE-TO-MEASURE SILICONE HEATING PANELS

In addition to rectangular shapes, silicone heating panels can quickly be made into all kinds of irregular shapes with holes and cuts-outs.

It is therefore possible to heat flat, cylindrical and conical surfaces, as well as pipework, up to 180°C.

Maximum peak temperature 200°C.

Rugged, flexible, and compact, silicone heating panels solve many problems of heating or maintaining temperature.

A self-adhesive surface can be added to one or two sides of the panel for permanent fixing.

The panels can optionally be fitted with a temperature limiter (I max. = 10 A / 230 VAC), a Pt100 probe, or a J- or K-type thermocouple.

Voltage 230V 1 P.

For other voltage or other phases consult us.

I max. = 17 A / phase.

Connection lead length = 1 m on standard model.

Max. dimensions = 2000 x 900 mm

To describe a panel made to measure, use the boxes below.

Consult us with your plans

To order a made-to-measure silicone heating panel, state:

Silicone heating panel, rectangular type 26156 or circular type 26166

Shape and dimensions: Rectangular mm x mm or circular Ø mm, or provide a drawing

Power: (not to exceed 0,7 W/cm² on metals and 0,3 W/cm² on polypropylene and PVC)

Voltage: (max. 400V 1 P or 400V 3 P)

With temperature limiter: Yes / No (cut-out temperature, °C) or with a Pt100 probe or a J- or K-type thermocouple

With a self-adhesive surface: Yes / No

To order a made-to-measure cylindrical silicone heating panel, state :

Cylindrical silicone heating panel type 26176

Minimum size : Inside diameter : 12 mm ; Length : 150 mm

Maximum size : Inside diameter : 150 mm ; Length : 900 mm

Power: (not to exceed 0,7 W/cm²)

Voltage: (max. 400V 1 P or 400V 3 P)

With temperature limiter : Yes / No pre-set to °C or with a Pt100 probe or a J- or K-type thermocouple

etched foil possibility

ACCESSORIES FOR SILICONE HEATING PANELS

- Special **silicone glue** to fix these panels to metal or plastic. Suitable for most materials. Available in two versions, to be used according to the prevalent temperature constraints: 200°C max. or 250°C max. Note: using primer **P/N. 26156-95** improves adhesion to metals and protects them from corrosion by the acetic acid released by the glue as it hardens.

- **Aluminium adhesive tape.** A simple and effective solution to fix silicone heating panels, whether flat or cylindrical. It ensures the protection of the heating panel whilst improving heat transfer.

- **Fixing belts for cylindrical heaters.** If cylindrical heaters need to be easily dismantled, we suggest the use of silicone belts. They are made of the same material as the heating panels, and fitted at one end with two metal rings for fastening. Belts should be placed at 100 mm maximum intervals along the cylinder.

P/N.	Description	Amount
26156-94	Glue Max. temp. 250°C	90 cm ³
26156-95	Primer for metal surfaces	90 cm ³
4550-00	Aluminium adhesive tape	5 cm x 50 m
26156-97	Fixing belt	Length 500mm
26156-98	Fixing belt	Length 1000mm

HOW TO SELECT YOUR INFRARED GENERATOR

400°C / 4,31µm

650°C / 3,14µm

1200°C / 1,97µm

3000°C / 0,89µm

LONG WAVE

MID WAVE

SHORT WAVE

Wavelength	LONG WAVE	MID WAVE	SHORT WAVE
Operating temperature range(°C)	from 400 to 500°C	from 750 to 850°C	from 2100 to 3000°C
Wavelength range	from 4,3 to 3,8 µm	from 2,6 to 2,8 µm	from 0,9 to 1,2 µm
Emitter source	Resistive wire encapsulated in ceramic	Sheathed tubular element	Filament under halogen into quartz pipe
Thermal inertia	2-5 min	1-2 min	0,5-1 sec
Max. installed power density	20 kW/m2	50 kW/m2	300 kW/m2
Applications	Homogeneous heating. Suitable for thick products (several mm).	Superficial heating. Suitable for humid product.	Superficial heating. Suitable for thin product.

LONG WAVE INFRARED SOURCES :

Different technologies are available for those sources. Nevertheless mainly the ceramics are used in industry. They are made of heating elements bedded in ceramic. The resistances raise the ceramic surface temperature from 300 to 700°C. Thermal inertia is high (>3-5 min.)

MIDWAVE INFRARED SOURCES :

They are made of resistances raised at temperatures between 700 and 1 000°C; the resistances are placed within a quartz/silica or metal sheathed tubular element to protect them. They emit lighting waves (red). Inertia is more consequent than shortwave (minutes), but they do not need cooling.

SHORT WAVE INFRARED SOURCES :

Those sources are lamps or tubes under vacuum or neutral gas; heating elements (emitter) are tungsten filaments raised at temperature higher than 2 000°C. They emit light (clear yellow) and allow very intensive power densities with low inertia (second). It's often necessary to cool them.

CERAMIC LONG WAVE INFRARED ELEMENTS

Infrared ceramic emitters provide longwave radiation ideally suitable for the preheating and thermoforming of plastics, rubber and synthetic fibers in addition to skin and blister packaging processes.

Advantages :

- No maintenance required
- No deviation of temperatures or wave lengths
- Appliance with water and acid
- Visual thermal indicator

FEATURES :

Radiation distances recommended from 100 to 200 mm. The element is encapsulated in ceramic coil and withstands high thermal shocks.

REF.	Power ± 10%	L (mm)	l (mm)	Curved or flat	Temp. (°C)	Weight (kg)

6020-13	500 W	122	122	F	500	0,25

Supply voltage : 230 V single phase
Interchangeable with English models FTE/HTE/SFE
and German models FSR/FSR-2/HFS.

CERAMIC LONG WAVE INFRARED LAMPS

Lamp adaptable to all applications of the long IR and, in particular, to the poultry industry. Screwed into a lamp socket ceramic suspension (E27 base) equipped with an aluminium reflector at high reflecting power. Supply voltage : 230 V single phase

P/N.	Power ± 10%	Temp. (°C)	λ (µm)	Weight (kg)
6020-35	150 W	280	5,3	0,18
6020-36	250 W	370	4,4	0,18

Reflector with E27 socket : P/N. 6020-33 (Weight 0,28 kg)

ACCESSORIES FOR CERAMIC LONG WAVE INFRARED ELEMENTS

These sets of accessories allow the achievement of infrared heating panels, using ceramic generators. Particularly suitable for high ambient temperatures, they are made of :

- Aluminium reflector (avoiding overheating behind the element);
- Stainless steel bus bars (for electrical connection);
- High-temperature ceramic terminal blocks;
- Sets of spacers (for fixing reflectors);
- Protective grid to suit the reflector ; can be used on all our in-line infrared generators, long, medium or short wave.

P/N.	Description	Weight (kg)
6020-34	Aluminium reflector (248 mm)	0,27
6020-42	10 spacers (M5 x 12 mm)	0,01
6020-40	Ceramic terminal block	0,05
6020-41	Bus bar (8x2) length 1,25 m	0,16
6014-17	Protective grid length 240 mm	0,15

MEDIUM WAVE INFRARED GENERATORS

APPLICATION :

Straight medium wavelength infra-red generator able to solve all your needs of industrial drying, cooking, polymerisation...

ADVANTAGES :

Rugged and careful build. Easy to install vertically or horizontally in an environment at 200°C max. Double electrical insulation. High reflecting power of reflector and long life of heating elements allows an universal use.

FEATURES :

Incoloy 800 triangulated section sheathed element fitted at the heart of a high efficiency aluminium parabolic reflector, mounted in a rigid light alloy profile provided with an adjustable attaching bolts.

P/N. in 230 V	P/N. in 400 V	Power +5-10%	L (mm)	Lc (mm)	P/N. 230V	Spare elements 400V	Weight (kg)

Supplied with 2 adjustable attaching bolts. See: electronic power controllers on page 82, connection wires with KAPTON insulator on page 117.

INDUSTRIAL INFRARED GENERATORS

MEDIUM WAVE INFRARED UNITS

Using similar technology than the short-wave infrared units, these appliances are made of sheathed medium-wave infrared elements fixed in front of a flat highly-reflective dimpled reflector, in a metal surround with integral cooling. Robust and non-polluting these metal heating elements can be install vertically or horizontally. These panels are suited to applications, such as drying powder coatings on metal components, coil-coating, food processing, etc. Specific temperature surface are available on request. Multizone power supply available

Can be fixed in any position.

P/N.	Power +5 -10%	Voltage (V)	I (mm)	Lc (mm)	L (mm)	Cooling wiring	Spare element	Unit power

6015-06	32,4 kW	230/400 3P	1080	970	1190	separated	6341-68	1800 W

Standard models : Emitters for step 60mm

Optional accessories :

- Counter-reflectors.
- Vitroceramic kit and protective brackets.
- Units also available without cooling.

MEDIUM WAVE INFRARED TIGHT GENERATOR "U" SHAPE

FEATURES :

6091 type is made of a tubular sheathed element pin-bended and an aluminum plated steel reflector. Electrical connections are through IP55 waterproof terminal box.

Supplied with 2 adjustable clamps, see :

- Electronic power distributors.
- KAPTON –insulated connection leads.
- Protective grilles (P/N. 6014-17).

P/N. in 230 V	P/N. in 400 V	Power +5 -10%	L (mm)	Lc (mm)	P/N. 230V	Spare elements 400V

6091-36	6091-37	3600 W	1290	1155	6091-86	6091-87

SHORT WAVE INFRARED GENERATORS

APPLICATIONS :

Radiation heating for textile, paper, cardboard, plastic and film industries and all applications requiring near zero inertia.

ADVANTAGES :

Immediate turning on and off. High power density. Reflector guaranteeing maximum reflection and high resistance to corrosion. Practically no maintenance. Emitter tube easily replacable. This emitter makes it possible to focus on a line from 10 to 60 mm width, giving densities up to 300 kW/m².

FEATURES :

Coiled tungsten filament mounted under a neutral gas in a quartz pipe. Matt black extruded aluminium holder serving as heat sink with an adjustable central hook-on lug.

DON'T TOUCH THE HEATING ELEMENT :

Avoid contact with the heating element; avoid also vibrations of the emitter when powered on. Place the generator horizontally at a distance from 60 to 300 mm from the part to be heated, according to the required power density. Some atmospheres require forced ventilation. It is possible to install several generators side by side.

SHORT WAVE INFRARED UNITS

APPLICATION :

Models with separately cabled ventilation. This will allow continuous ventilation even after tubes extension. Ideally suitable when a power control is needed or for high temperature treatments.

ADVANTAGES :

- Accurate control system.
- Well designed for wide applications.
- Easy maintenance.
- Light weighted and compact.

TEMPERATURE CONTROLLER WITH TWO USER CALIBRATION POINTS

INFRARED TEMPERATURE SENSORS

The **auto-tuned PID** controller with digital display (96x103) format includes a J-type thermocouple input, an analogue 0-20mA heating output, and an alarm relay output.

This infrared **sensor** allows you to regulate the temperature of a static or production-line product in an open space without touching it, especially in infrared heating installations. It measures the radiation emitted by the product (target) and converts it into a configurable signal controller.

Regulator P/N : 30882-01

Sensor P/N: 31200.74

CONTROLLER MAIN FEATURES :

- Supply voltage : 85 to 264 VAC - 10W.
- Two user calibration points.**

SENSOR MAIN FEATURES :

- Temperature range: 40 to 600°C (25 to 600°C with J type thermocouple)
- Optical resolution: 10:1
- Adjustable emissivity
- Configurable output signals: analogue 4-20 mA, 0-20 mA, 0-5 V, J or K type thermocouples
- Supply voltage: 11 to 26 V DC ; 100 mA
- Probe cooling envelope must be connected to compressed air supply, for ambient temperatures up to 150°C
- IP65 offset connecting box (to be placed in an area of 60°C max.) with 1 m cable for probe connection.

PULSE CONTROL OR PHASE ANGLE POWER DISTRIBUTORS

APPLICATION :

Electronic controllers provide control of the heating elements power range from 0 to 100% of their max. value.

ADVANTAGES :

These models are particularly suited to the control of the infrared generators. Flexibility and easy to use.

FEATURES :

- A scaled potentiometer indicates the setting.
- A pulse control modulated output for resistive loads with low temperature coefficient.
- Phase angle output for resistive loads with high temperature coefficient as short waves IR

CERAMIC LONG WAVE INFRARED GENERATORS

These models are suitable for the **heating of people in houses**, workshops or offices. They are fitted with ceramic long-wave infrared elements.

They do not emit any visible light and have a very high efficiency. They do not heat the air and so are ideally suited to places which are difficult to heat, such as buildings which are badly insulated, are draughty, or have high ceilings.

These appliances must be fixed to a ceiling or to a wall at a minimum height of 1.9 meters.

Supply voltage : 230 V 1P.
Supplied with swivelling fixing brackets.
Other powers to order.
Spare parts :
500 W ceramic element P/N. 6020-03.

P/N.	Power ± 10%	L (mm)	Lc. (mm)	Weight (kg)
6014-91	1000 W	600	505	2,45
6014-92	1500 W	850	755	3,45
6014-93	2000 W	1100	1005	4,4

CERAMIC LONG WAVE INFRARED GENERATORS

This ceramic long-wave infrared generator, mounted on a mobile support, is particularly suited to the **localised heating of people and workplaces**.

The stable, robust, 2 m high support allows economical and instant heating of the required places only, with no emitted light.

Supply voltage : 230 V 1P.

Floor-standing appliance, working on the same principle as the preceding models. Their compact size and light weight suits them for auxiliary heating of large-volume buildings. Short warm-up time, no emitted light.

P/N.	Power ±10%	L (mm)	Spare element	Weight (kg)
6014-95	2000 W	322	6020-13	3,35
6014-96	Mobile support ,1m height			

METALLIC MEDIUM WAVE INFRARED GENERATORS

This medium-wave infrared generator is suitable for the heating of people in covered places where conditions are particularly harsh in industrial premises or warehouses. Solidly built and fitted with WP+ seals, it can tolerate long pause periods without damage to its insulation.

These appliances must be fixed to a ceiling or to a wall at a minimum height of 2,5 m up to 4 m

Limit the heating flux on the ground at 300 W/m².

Supply voltage : 230 V single phase.
Supplied with swivelling fixing brackets.

P/N.	Power ±10%	L (mm)	Lc. (mm)	Spare element	Weight (kg)
6014-04	1000 W	790	610	6014-14	2,4
6014-05	1500 W	1050	870	6014-15	3,1
6014-06	2000 W	1310	1130	6014-16	3,8

QUARTZ SHORT WAVE INFRARED GENERATORS

These appliances are the best solution for heating people in large buildings such as warehouses, sports halls, churches, loading docks, workplaces, etc.

Main Advantages : fast heat, swivelling reflector giving heat to the desired area only. Neutral or ruby light reduce dazzle.

Features :

Epoxy-coated.

Supply voltage : 230 V single phase.

Spare lamp : P/N. 6117-90

Power to be installed, in W/m²

Workshop	135
Church	270
Warehouse	135
Shop/ exhibition hall	270
Loading dock	200

Control units

THERMOSTATS AND SAFETY TEMPERATURE CUT OUTS

notes :
 - The NC contacts open when the temperature rises, while the NO contacts close when the temperature rises.
 - The differential is the temperature difference between the operating point of the thermostat and the level where the contacts return to their original state.

THERMOSTATS WITHOUT FITTINGS

Liquid expansion type, copper capillary and bulb.

Double-pole double-throw contacts, 16 A at 400 VAC.

Accuracy $\pm 1\%$ of full scale.
 Differential 2,5% of full scale.

P/N.	Range (°C)	Bulb Ø (mm)	Bulb length (mm)	Capillary length (mm)	Weight (kg)
9014-04	0-100	8	100	1500	0,16
9014-05	50-200	5	150	1500	0,16
9014-03	0-300	5	100	1500	0,16
9014-07	0-300	5	120	3000	0,17

Steam pressure thermostats, with stainless steel 1m long capillary .

Single-pole double-throw contacts, 16A at 250 VAC
 6mm Ø bulb. Small in size but with an excellent breaking capacity, these thermostats fit easily into control boxes. They are the most cost-effective solution for temperature control.

P/N.	Range (°C)	Accuracy (°C)	Differential (°C)	Bulb Ø (mm)	L (mm)	Weight (kg)

POSITIVE SAFETY TEMPERATURE CUT-OUTS WITH ADJUSTABLE THRESHOLD

Designed to protect water-heating installations against overheating, these temperature cut-outs are adjustable between 90° to 110°C and are manually reset.

They are fitted with a 1m long capillary and a 6,5x90 mm bulb.

Circuit is open if the sensor is broken.

Single-pole normally close contacts, breaking capacity 15A at 230V.

P/N.	Cut-out temp.	Cut-out tolerance	Max. bulb temp.
9030-31	90/110°C	+0°C/-6°C	120°C

THREE PHASE SAFETY TEMPERATURE CUT-OUT THERMOSTAT

Liquid expansion type thermostat including a safety temperature cut-out function with manual reset.

Temperature range +15°C to +85°C.

Safety temperature pre-set to 110°C.

Triple-pole normally close contacts, breaking capacity 3x20A at 400V.

P/N.	Range (°C)	Bulb Ø (mm)	Bulb length (mm)	Capillary length (mm)
9014-13	Thermostat +15/+85	6	95	900
	Safety temp Fixed at 110°C	6	120	900

ENCLOSED ROD-TYPE THERMOSTATS

Simple to install and use, these box-mounted liquid-expansion thermostats are fixed to the tank (or pipe) and heated via the supplied copper thermowell.

IP40 box.

Copper probe, length 95mm.

Single-pole double-throw contacts, breaking capacity 15A at 250VAC, 10A at 400VAC.

Differential 6°K,

Accuracy ±3°C,

Max. working pressure: 10 bar.

P/N.	Range (°C)	Max. bulb temp.
9030-11	10/90	120
9030-12	40/120	150

ENCLOSED ROD-TYPE POSITIVE SAFETY TEMPERATURE CUT-OUTS

These positive safety temperature cut-outs, (box mounted), with manual reset, are used to protect water heating systems against overheating. Circuit is open if the sensor is broken.

Simple to install and use, these box-mounted liquid-expansion thermostats are fixed to the tank (or pipe) and heated via the supplied copper thermowell.

IP40 box.

Copper probe, length 95mm.

Single-pole double-throw contacts, breaking capacity 15A at 250V, 10A at 400V

Differential 6°K, . Max. working pressure : 10 bar.

P/N.	Cut-out temp.	Cut-out Accuracy	Max. bulb temp.
9030-21	100°C	+0°C/-6°C	120°C

ENCLOSED THERMOSTATS AND POSITIVE SAFETY TEMPERATURE CUT-OUTS

Box containing a adjustable thermostat between 10°C to 90°C and a temperature cut-out, pre-set to 100°C, with manual reset.

Circuit is open if the sensor is broken.

Simple to install and use, these box-mounted liquid-expansion thermostats are fixed to the tank (or pipe) and heated via the supplied copper thermowell.

IP40 box.

Copper probe, length 95mm.

Thermostat : single-pole double-throw contacts, breaking capacity 15A at 250V, 10A at 400V.

Cut-out : normally close contact

Differential 6°K, Max. working pressure : 10 bar.

P/N.	Cut-out temp.	Cut-out tolerance	Max. bulb temp.
9030-41	100°C	+0°C/-6°C	120°C

THERMOSTATS AND SAFETY TEMPERATURE CUT OUTS

ENCLOSED THERMOSTATS

Liquid expansion type, copper bulb and capillary.
Double-pole double throw contacts, 16A at 400VAC.
Accuracy $\pm 1\%$ of full scale.
Differential 2,5% of full scale.
Adjusting knob accessible by removal of the cover.

P/N.	Range (°C)	Bulb Ø (mm)	Bulb length (mm)	Capillary length (mm)	Weight (kg)

EXTRA-LONG THERMOSTATS

Extra-long steam pressure thermostat in a stainless steel thermowell, with IP 55 cover.

Double-pole double-throw contacts, breaking capacity 16A at 400VAC.

Specially designed for type 4910 suction filter heaters, see immersion heater section

Accuracy $\pm 3\%$ of full scale.

Supplied with a fixing gland.

P/N.	Range (°C)	Ø (mm)	L (mm)	Weight (kg)
9010-01	0-300	12	3000	3

Note : Cutting to length L can be done within a short delivery time to suit the exactly dimensions of your tank

ROD TYPE THERMOSTATS

Liquid expansion type thermostat with a 6mm Ø probe in a removable stainless steel thermowell, with an IP 54 cover.

Differential 2,5% of full scale.

Double-pole double-throw contacts, 10A at 230V.

To install these thermostats you need only a 1/2" BSP threaded hole in the recipient tank. The sealable cover is fixed to the thermowell by a retaining screw, and the bulb can easily be removed.

THERMOSTATS AND SAFETY TEMPERATURE CUT OUTS

AMBIENT AIR THERMOSTATS

Simple model designed for temperature control in rooms or air-conditioned enclosures. Normally close contact, breaking capacity 10A at 250VAC. Differential 0,6°C.

Suitable for outdoor use, for frost protection of water tanks, pipes, pools... Sealable IP 55 cover. Normally close contact, breaking capacity 10A at 250VAC. Differential 3°C.

P/N.	Range (°C)	Weight (kg)
9014-20	5/30	0,12

P/N.	Range (°C)	Weight (kg)
9014-23	-20 / +30	0,41

SAFETY CUT-OUTS WITH ADJUSTABLE THRESHOLD

Temperature limiter, liquid expansion type with capillary. Single-pole double-throw contacts, breaking capacity 16A at 400VAC. Manual reset. Stainless steel capillary, length 1 m and stainless steel bulb, diameter 6 mm.

P/N.	Range (°C)	Bulb L (mm)	Weight (kg)
9030-05	+50 +300	85	0,15
9030-06	+20 +500	300	0,15

PRE-SET SAFETY TEMPERATURE LIMITERS

Temperature limiter, bimetallic expansion type with automatic reset, for air temperature alarms. Normally close contact, breaking capacity 10A at 250VAC. Differential 12°C.

P/N.	Cut-out temp.	Weight (kg)
53691-01	90°C	0,01
9009-01	110°C	0,01

Temperature limiter, positive safety steam pressure type, with automatic or manual reset. Capillary Ø 1,9 mm, length 1 m. Normally close contact, breaking capacity 16A at 250VAC. Differential 12°C.

P/N.	Cut-out temp.	Reset	Weight (kg)
54229-01	90°C	auto.	0,05
53710-01	90°C	manu.	0,05

TIMERS

This timer allows two electrical appliances to be switched on and off independently according to a daily and weekly cycle. 42 switching orders can be programmed for any time over a maximum period of a week. Minimum programming interval : 1 minute. Digital display giving hour, working state and programming.

P/N.	Voltage (V)	Weight (kg)
9025-12	230V 50 Hz	0,2

Quick summer/winter time changeover. Backup in case of power cuts : 150 hours max.
double throw open contacts : 16A at 250VAC
Resistive load.

THERMO HYGROMETER

Humidity transmitter 40 HRG for air duct heater, robust design, measures the relative humidity and provides information through an output signal of 4/20 mA with 2 wires. HRG 40 is suitable for use in harsh environments (saline atmosphere and nitric acids, sulfuric, hydrochloric up to 75000 ppm). Max operating Humidity 93%
Digital measurement (sensor included) ensures excellent repeatability and excellent performance characteristics

- Cast aluminium box with epoxy coating with sealing gland.
- Closing by clip or screw closure (IP 54 or 65)
- Stainless steel 316 dipping tube (Ø = 13,5mm)
- Pressure holding: 2 bars.
- Humidity hysteresis : +/- 1,5%
- Supply voltage 9 to 36 Vdc by 2 wires with protection against reverse polarity.
- Possibility to unplug the sensitive element
- Version with display is available on request (LCD 4 digits- 10000 points resolution)

P/N.	Max Temp.	Screw plug sliding
30746-01	60 °C	1/2" BSPP
30746-02	60 °C	1/2" BSPT
30746-01	60 °C	1/2" NPT

ELECTRO-MECHANICAL THERMOSTATS WITH FIXING FLANGE

These thermostats can easily be fixed to ventilation ducts and oven walls to monitor air and gas temperatures.

Max. pressure : 100 mm WC

Breaking capacity on resistive load :

- 5/8" models:

10 A at 115 VCA, 5A at 230 VCA, 2 A at 115 VCC.

- 1/2" models:

5 A at 115 VCA, 3 A at 230 VCA, 1 A at 115 VCC.

- 1/4" models:

1A at 115 VCA

Not pre-set

P/N	Ø A	Temp. Range	Contact	P (mm)	h (mm)	E (mm)	Ø D (mm)	Ø T (mm)	Ø V (mm)	Model	Type

To order a pre-set thermostat state type P/N. followed by the required temperature.

Example : Type 8453 pre-set to 130°C.

SELECTING A TEMPERATURE SENSOR

A temperature sensor is generally a small diameter cylinder (between 0.5 and 8 mm), varying in length (between 50 mm and several meters), rigid or deformable and immersed in the media to be measured : solid, liquid or gas. The choice depends on the following criteria: temperature range, precision, response time, media to be measured, overall dimensions, pressure, corrosion, attachment and connection.

The NTC technology (thermistor) is used predominantly for domestic applications based on the ambient temperature (-80° to 150°C).

The PTC technology (PT 100) is suited to industrial applications between -50°C and 500°C, in the absence of excessive vibration.

The thermocouple technology allows very short response times and high temperatures but with a lower precision (+/- 2°C on average).

The electrical connection of the sensors is made either using flexible cables or connectors, or on a terminal block inside a small standardised metal case referred to as the "probe head". When the cable is particularly long, it is advisable to use a 4/20 mA measurement converter installed in the probe head.

Some connection devices are ATEX certified in the "d", "e" or "ia" protection modes in a G (gas) or D (dust) environment.

The fastening of a sensor is done by a welded or swaged coupling, a sliding flange or by a bracket integrated in a case.

The use of a thermowell allows easy replacement of the sensor, its use in particularly corrosive environments and better resistance to high-pressure levels.

The mineral insulated cables are deformable. Generally long, they can be shrunk at the ends to benefit from a better response time.

PTC TECHNOLOGY (PT 100)

A PT 100 probe is a resistor whose value in ohm (Ω) increases in proportion to the temperature (100 Ω at 0°C).

The resistance measurement is carried out by the current circulation generated by a measuring device or a regulator, through copper interconnecting wires.

The compensation for the interconnection conductor resistance is obtained by an artifice which consists in connecting a third wire (industrial applications) or even a fourth wire (laboratory applications).

The colours of the wires (white and red), the resistance variation and the precision class are defined in EN 60751 standard:

Class A (1/2 class B) : +/- (0.15°C + 0.0025.t)

Class B : +/- (0.3°C + 0.005.t)

1/10 class B : (0.03°C + 0.0005.t)

t = temperature measured in °C.

The sensitive element is inserted into a rigid sheath having a minimum diameter of **3 mm** and a minimum length of **30 mm**, and then extended by wires, a flexible cable or a cable with a mineral insulator.

The customary diameters of the rigid sheaths for probes are 4, 5, 6 and 8 mm. The customary diameters of deformable probes consisting of cables with mineral insulators are 3, 4, 5 and 6 mm.

Metallic protection sheaths are generally of AISI 316L/ DIN 1.4404 stainless steel when immersed in a fluid and AISI 304 L / DIN 1.4306 stainless steel when inserted into a thermometer well.

The response time of a probe depends on its diameter (approximately 4 sec in water for 3 mm diameter and 11 sec for 8 mm diameter).

The interconnection cables (one white conductor and two red conductors) provide a way of connecting the probes to a measuring or regulating device. Considering the low level of the transmitted signal, it is preferable to use shielded cables.

SELECTING A TEMPERATURE SENSOR

THERMOCOUPLE

A thermocouple is a soldered joint between 2 wires of different metals (known as "hot soldering") across the terminals of which an electrical voltage is generated proportional to the measured temperature.

Analysis of this signal must be carried out by instrumentation and suitable interconnection wires compensating for the errors caused by the nature and temperature of the different connecting parts. For each type of thermocouple, the metal forming the conductors, the colour of the wires, the electromotive force and the precision class are defined by standards EN 60584-1 and EN 60584-2, of which the main types are:

Code	Nominal scale	Polarity	Colour	Precision	
				Class 1	Class 2
J	-40°C to +750°C	Fe +	Black	$\pm 1,5^{\circ}\text{C}$	$\pm 2,5^{\circ}\text{C}$
		Cst -	White	or $\pm -0,004.t$	or $\pm -0,0075.t^{\circ}\text{C}$
K	-40°C to +1200°C	NiCr +--	Green	$\pm 1,5^{\circ}\text{C}$	$\pm 2,5^{\circ}\text{C}$
		NiAl --	White	or $\pm 0,004.t$	o $\pm 0,0075.t^{\circ}\text{C}$
N	-40°C to +1200°C	NiCr +--	Pink	$\pm 1,5^{\circ}\text{C}$	$\pm 1,5^{\circ}\text{C}$
		Nis --	White	or $\pm 0,004.t$	or $\pm 0,0075.t^{\circ}\text{C}$
R	0°C to 1600°C	Pt +	Orange	$\pm 1^{\circ}\text{C}$	$\pm 1,5^{\circ}\text{C}$
		PtRh13	White	or $\pm 0,0015.t$	or $\pm 0,0025.t^{\circ}\text{C}$
S	0°C to 1600°C	Pt +	Orange	$\pm 1^{\circ}\text{C}$	$\pm 1,5^{\circ}\text{C}$
		PtRh10 +	White	or $\pm 0,0015.t$	$\pm 0,0025.t^{\circ}\text{C}$
T	-40°C to 350°C	Cu +	Brown	$\pm 0,5^{\circ}\text{C}$	$\pm 1^{\circ}\text{C}$
		Cst -	White	or $\pm 0,004.t^{\circ}\text{C}$	$\pm 0,0075.t^{\circ}\text{C}$

There are several thermocouple technologies:

- Bare wires, if necessary protected by insulating beads and inserted into a rigid tube with customary diameters of: 3 or 4 or 5 or 6 mm.
- Mineral insulated cables are defined by standard EN 61515 with customary diameters of: 0.5 , 1, 2, 3, 4.5, 6 or 8 mm.

HOT JUNCTION

When the installation is by the measuring device or the regulator, the hot soldered joint can be connected to ground to reduce the sensor response time.

Metallic protection sheaths are generally of AISI 316L/ Din 1.4404 stainless steel for type J and of Inconel 600 for type K (when immersed in a fluid) or AISI 304 L/ Din 1.4306 stainless steel (when inserted into a thermometer well).

The response time of a thermocouple depends on its diameter (approximately 0.05 sec in water for 0.5 mm diameter and 5 sec for 8 mm diameter). Divide these values by two when the hot soldered joint is connected to ground. The extension cables (conductors of the same type as those of the couple) or compensation cables (conductors of different types from those of the couple) are governed by standard IEC 584-3. They are indispensable for connecting thermocouples to a measuring or regulating device. Considering the low level of the transmitted signal (a few mV), it is preferable to use shielded cables. Compensated connectors are necessary for the connection of these cables.

PT100 SENSORS WITH PVC CABLE

PT 100 ohm at 0°C class B sensing element, inside a 316L stainless steel sheath, with sealed end and 3 wire PVC insulated cable with connection thimbles, with or without shielding.

Temperature range : - 30 to + 90°C.

Other manufacturing capabilities : accuracy from class A up to 1/10 class B ,diameter 5 or 6 mm, total sheath length from 50 up to 1000 mm, other cable length, other types of electrical connections, 4 wires circuit.

P/N.	Ø D (mm)	braided sheath	L (mm)	B (mm)	Weight (kg)
31030-09	5	without	50	5000	0,04
31030-10	5	without	100	5000	0,08

31030-12	6	with	50	5000	0,04
31030-13	6	with	100	5000	0,08
31030-02	6	with	150	5000	0,12
31030-04	6	with	250	5000	0,18
31030-05	6	with	300	5000	0,24
31030-06	6	with	550	5000	0,321

PT100 SENSORS WITH FEP SHIELDED CABLE

PT 100 ohm at 0°C class B sensing element, inside a AISI 316L/ Din 1.4404 stainless steel sheath, with sealed end and 3 wires FEP insulated cable with connection thimbles and shielding.

Temperature range : - 60 to + 200°C.

Other manufacturing capabilities : accuracy from class A up to 1/10 class B ,diameter 5 or 6 mm total sheath length from 50 up to 1000 mm, other cable length, other types of electrical connections, 4 wires circuit.

P/N.	Ø D (mm)	L (mm)	B (mm)	Weight (kg)
31035-11	6	30	5000	0,03
31035-14	6	50	5000	0,04
31035-15	6	100	5000	0,1
31035-12	6	150	5000	0,15
31035-13	6	300	5000	0,28

FLEXIBLE MINERAL INSULATED PT100 SENSORS WITH PVC SHIELDED CABLE

PT 100 ohm at 0°C class B sensing element, inside a 316L flexible stainless steel sheath, with sealed end and 3 wires PVC insulated cable with connection thimbles and shielding. A coiled spring protects the lead wires against sharp bends in the transition area.

Temperature range : - 50 to + 500°C (element).
- 30 to + 90°C (cable)

Other manufacturing capabilities : accuracy from class A up to 1/10 class B ,diameter 4,5 or 6 mm, total sheath length from 100 up to 5000 mm, other cable length, other types of electrical connections, 4 wires circuit, adjustable compression fitting type 31271.

P/N.	Ø D (mm)	L (mm)	B (mm)	Weight (kg)
31048-01	4,5	150	5000	0,13
31048-02	4,5	250	5000	0,17
31048-03	4,5	350	5000	0,27
31048-04	4,5	500	5000	0,34
31048-05	4,5	1000	5000	0,61

PT100 SENSORS WITH HIGH TEMPERATURE CABLE

PT 100 ohm at 0°C class B sensing element, inside a AISI 316L/Din 4404 no flexible stainless steel sheath, with sealed end and 3 wires fibreglass insulated cable (350°C maxi) with connection thimbles and metallic overbraid. A coiled spring protects the lead wires against sharp bends in the transition area.

Temperature range : - 50 to +500°C .

Other manufacturing capabilities : accuracy from class A up to 1/10 class B, diameter 4,5 or 6 mm, total sheath length from 100 up to 5000 mm, other cable length, other types of electrical connections, 4 wire circuit, adjustable compression fitting type 31271.

P/N.	Ø D (mm)	L (mm)	B (mm)	Weight (kg)
31032-03	4,5	100	2500	0,09
31032-01	4,5	200	2500	0,15
31032-04	4,5	300	2500	0,26
31032-05	6	150	2500	0,10
31032-02	6	250	2500	0,18
31032-06	6	300	2500	0,20
31032-07	6	550	2500	0,35

PT100 SENSORS WITH IP66 HEAD

PT 100 ohm at 0°C class B sensing element, inside a AISI 316L/Din 1.4404 stainless steel sheath - Ø 9 mm thickness 1 mm.

Temperature range : - 50 to + 500°C (sensor).

Threaded fitting below the head (DAN-V) in Epoxy coated alloy, hinged cover fixed by screws (IP66) .Sealing gland for leads (8mm) is provided

P/N.	Ø D (mm)	B (mm)	L (mm)	Weigh (kg)
31117-01	3/8"BSPT	0	100	0,1
31117-02	1/2"BSPP	0	100	0,1
31117-03	1/2"BSPP	0	250	0,2
31117-04	1/2"BSPP	145	100	0,2
31117-05	1/2"BSPP	145	250	0,3
31117-06	3/8"BSPT	145	100	0,1

PT100 SENSORS WITH IP54 HEAD AND FLANGE FITTING

PT 100 ohm at 0°C class B sensing element, inside a AISI 316L/Din 1.4404 stainless steel sheath - Ø 6 mm the lectrical connection is done by a 3 poles terminal block inside an IP54 aluminium head, epoxy painted.

Temperature range : - 50 to + 500°C (sensor).

Fitting by Flange stainless steel sliding.

P/N.	Ø D (mm)	L (mm)	Weigh (kg)
31118-01	6	250	0,1
31118-02	6	500	0,15

PT100 SENSORS WITH MINIATURE IP54 ALUMINIUM HEAD

PT 100 ohm at 0°C class B sensing element, inside a AISI 316L/Din 1.4404 stainless steel sheath. Electrical connection by a 3 poles terminal block inside an IP54 miniature aluminium head, epoxy painted, with compression gland ISO 16. Supplied with or without a 1/2" BSPT threaded fitting, welded below the head.

Temperature range : - 50 to + 500°C (sensor)

- 50 to + 80°C (box)

Other manufacturing capabilities : accuracy from class A up to 1/10 class B ,diameter 5 or 6 mm, total sheath length from 50 up to 1000 mm, 4 wires circuit, fastening by sliding flange.

P/N.	Ø D (mm)	L (mm)	Connector	Weight (kg)
31042-08	6	100	without	0,1
31042-01	6	100	with	0,16
31042-04	6	150	without	0,11
31042-09	6	150	with	0,2
31042-02	6	200	without	0,13
31042-10	6	200	with	0,24
31042-05	6	250	without	0,16

FLEXIBLE MINERAL INSULATED PT100 SENSORS WITH IP65 ALUMINIUM HEAD

Single PT sensor, 100 ohm at 0°C, class B, in a flexible stainless steel sheath with sealed end and 3 terminals in a miniature box (80°C max.) with a ISO 16 gland.

Temperature range : - 50 to + 500°C (element)

- 10 to + 80°C (head)

Other manufacturing capabilities : accuracy from class A up to 1/10 class B ,diameter 4,5 or 6 mm, total sheath length from 100 up to 5000 mm, 4 wires circuit, fastening by compression fitting type 31271. or mounting flange.

P/N.	D (mm)	L1 (mm)	L2 (mm)	Weight (kg)
31023-07	4,5	100	30	0,08
31023-08	4,5	200	30	0,12

31023-12	6	500	30	0,35

FLEXIBLE MINERAL INSULATED PT100 SENSORS WITH IP65 ALUMINIUM HEAD

PT 100 ohm at 0°C class B sensing element, inside a AISI 316L/ Din 1.4404 flexible stainless steel sheath. Electrical connection by a 3 poles terminal block inside an IP 65 aluminium head, epoxy painted, with compression gland for cable dia 4 to 15 mm.

Temperature range : - 50 to + 500°C (element)

- 10 to + 80°C (head)

Other manufacturing capabilities : accuracy from class A up to 1/10 class B ,diameter 4,5 or 6 mm, total sheath length from 100 up to 5000 mm, 4 wires circuit, fastening by compression fitting type 31721, 4/20 mA transmitter installed inside the head.

P/N.	Ø D (mm)	L1 (mm)	L2 (mm)	Weight (kg)
31022-01	4,5	150	30	0,12
31022-02	4,5	200	30	0,16
31022-03	4,5	300	30	0,24
31022-04	4,5	350	30	0,30

31022-06	4,5	550	30	0,36

PT 100 SENSORS

PT 100 SENSORS WITH IP65 OFFSET ALUMINIUM HEAD

PT 100 ohm at 0°C class B sensing element, inside a AISI 304L /Din 1.4306 stainless steel sheath. Electrical connection by a 3 poles terminal block inside an IP 65 offset aluminium head, epoxy painted, with compression gland for cable dia 4 to 15 mm. Spring loaded terminals, with a 8 mm clearance (the L dimension is corresponding to the half compression of the spring) Offset AISI316 L /Din 1.4404 nipple 1/2" NPT threaded fitting

Temperature range : - 50 to + 500°C (element)
- 50 to + 80°C (head)

P/N.	Ø D (mm)	L1 (mm)
31045-01	4,5	100
31045-02	4,5	200
31045-03	4,5	300
31045-04	6	100
31045-05	6	200
31045-06	6	300

Other manufacturing capabilities : accuracy from class A up to 1/10 class B, total sheath length from 50 up to 1000 mm, offset nipple length 58 or 108 mm, 4 wires circuit, possible fixing nipple union, ATEX approval Ex ia or Ex e, 4/20 mA transmitter installed inside the head.

FLEXIBLE PT 100 SENSORS WITH IP65 STAINLESS STEEL HEAD

PT 100 ohm at 0°C class B sensing element, inside a flexible AISI 316L/Din 1.4404 stainless steel sheath. Electrical connection by a 3 poles terminal block inside an IP 65 stainless steel AISI 316L/Din 1.4404 head, epoxy painted, with compression gland for cable dia 4 up to 15 mm.

1/2" NPT threaded fitting welded below the head
Temperature range : - 50 to + 500°C (element)
- 50 to + 80°C (head)

P/N.	Ø D (mm)	L1 (mm)
31043-10	6	100
31043-11	6	200
31043-12	6	300
31043-13	6	400

Other manufacturing capabilities : accuracy from class A up to 1/10 class B , diameter 6 mm, total sheath length from 100 up to 5000 mm, 4 wire circuits, 4/20 mA transmitter installed inside the head.

FLEXIBLE PT 100 SENSORS WITH ATEX HEAD - Ex d - IP65

PT 100 ohm at 0°C class B sensing element, inside a flexible AISI 316L/Din1.4404 stainless steel sheath. Electrical connection by a 3 poles terminal block inside an IP 65 EXPLOSION PROOF head with a compression gland for cable dia 8 mm.

1/2" NPT threaded fitting welded below the head.
temperature range: - 50 to + 500°C (element)
- 20 to + 80°C (head)

Usable in hazardous areas (ambient temperature from -20 °C up to 80°C, relative humidity 95 % maximum).

Certificate: **LCIE 02 ATEX 6097X** some precautions must be taken for using this device. Consult us or read the instruction manual

Other manufacturing capabilities : accuracy from class A up to 1/10 class B, diameter 6 mm, total sheath length from 100 up to 1000 mm, 4 wire circuits, 4/20 mA transmitter installed inside the head.

P/N.	Ø D (mm)	L1 (mm)
31043-15	6	100
31043-16	6	150
31043-17	6	200
31043-18	6	250
31043-19	6	300
31043-20	6	400

PT 100 SENSORS WITH ATEX HEAD - Ex d - IP65

PT 100 ohm at 0°C class B sensing element, inside a AISI 304L/ Din 1.4306 stainless steel sheath. Electrical connection by a 3 poles terminal block inside an IP 65 offset EXPLOSION PROOF head with compression gland for cable dia 8 mm. Spring loaded terminals, with a 8 mm clearance (the L dimension is corresponding to the half compression of the spring) Offset AISI316 L/Din 1.4406 nipple 1/2" NPT threaded fitting

Temperature range : - 50 to + 500°C (element)
- 20 to + 80°C (head)

P/N.	Ø D (mm)	L1 (mm)	L2 (mm)
31045-07	4,5	100	108
31045-08	4,5	200	108

31045-10	6	100	108
31045-11	6	200	108
31045-12	6	300	108

Usable in hazardous areas (ambient temperature from -20 °C up to 80°C, relative humidity 95 % maximum).

Certificate: **LCIE 02 ATEX 6097X** some precautions must be taken for using this device. Consult us or read the instruction manual

Other manufacturing capabilities : accuracy from class A up to 1/10 class B, total sheath length from 50 up to 1000 mm, offset nipple of 58 or 108 mm, 4 wires circuit, fastening nipple union, 4/20 mA.

Options : transmitter installed inside the head.

FLEXIBLE PT 100 SENSORS WITH ATEX HEAD - Ex d - IP65

PT 100 ohm at 0°C class B sensing element, inside a flexible AISI 316L/ Din 1.4404 stainless steel sheath. Electrical connection by a 3 poles terminal block inside a miniature EXPLOSION PROOF head IP 65 marking II 2 G Ex d IIC T6, with compression gland for cable dia 6 up to 9 mm. :
 Temperature range : -50 to + 500°C (element)
 - 20 to + 80°C (head)

Other manufacturing capabilities : accuracy from class A up to 1/10 class B diameter 4,5 or 6 mm, total sheath length from 100 up to 5000 mm, 4 wires circuit, fastening by compression fitting type 31721.

P/N.	Ø D (mm)	L (mm)
31026-01	4,5	200
31026-06	4,5	300
31026-07	6	300
31026-08	6	400

Usable in hazardous areas (ambient temperature from -20 °C up to 80°C, relative humidity 95 % maximum).

Certificate: **LCIE 02 ATEX 6097X** some precautions must be taken for using this device. Consult us or read the instruction manual

PT 100 SENSORS WITH PTFE SHEATH AND FEP LEADS

PT 100 ohm at 0°C class B sensing element, inside a PTFE sheath, with sealed end and 3 wires FEP insulated leads with connection thimbles. Supplied with 3 terminals for electrical connection on 2,5 mm² wires.
 Special design to be used with PTFE heating panel (see immersion heaters section).

P/N.	Max. temp.	Weight (kg)
26216-01	105°C	0,10

PT 100 SENSORS FOR SKIN TEMPERATURE MEASUREMENT

PT 100 ohm at 0°C class B sensing element, inside a AISI 316L/Din 1.4404 stainless steel sheath, flattened to measure the skin temperature of hoses, with sealed end and 3 wires PFE insulated cable with connection thimbles and shielding.

P/N.	Max. temp.	B (mm)	Weight (kg)
31180-01	200°C	1000	0,2
31180-02	200°C	3000	0,4
31180-03	200°C	5000	0,7

RING LUG PROBES

Mainly intended for the measure of surfaces temperature on machine contact or thermic dissipators. Sensing element mounted in a terminal ring lug connector
 Insulated conductors teflon/teflon cable length 1m.
 2 Cables for TC or 3 conductive isolated wires for RTD 100

REF.	Probet	Ø D (mm)	Rqnge (°C)
31711-05	PT100 sensor	10,2	-50/+200
31711-02	Thermocouple K	5	-50/+280

On request :
 Others fixing diameter
 Available for Atex areas (dust or gas)

SCREW PLUG PT100 SENSORS

Compact probe for direct screwing in the part to measure.
 PT 100 ohm at 0°C class B sensing element inside a AISI 316 L/Din 1.4404 screw. 3 wires PTFE insulated cable with connection thimbles.
 Temperature range : - 80 to + 200°C

P/N.	Ø D	Length threaded (mm)
31109-01	1/4"-20 UNF	11
31109-02	M8 ISO	16
31109-03	M10 ISO	16

ROOM AND OUTSIDE AMBIENT AIR TEMPERATURE PT 100 SENSORS

Room sensor : **P/N. 31055-01**
 PT 100 ohm at 0°C class B sensing element inside a holed plastic box to IP 20, for wall mounting.
 Temperature range : - 40 to + 85°C
 Electrical connection by a 2, 3 or 4 poles terminal block through the bulkhead.

Outside ambient sensor : **P/N. 31055-02**
 PT 100 ohm at 0°C class B sensing element inside a plastic box to IP 65, for wall mounting.
 Temperature range : - 50 to + 100°C
 Electrical connection by a 2, 3 or 4 poles terminal bloc, with compression gland.

LAMINAR PLATINUM PROBES 7,6 MMX7,6 MM

Sensing element Pt 100 Ω, Class B.
 AWG 28 wire outputs Teflon lined
 One adhesive side for attachment.
 Thickness : 0,5 mm on element - 0,7 mm on wires.
 Options on request :
 • Without adhesive (-200°C / +200°C).
 • Wire length > 1000 mm.

P/N.	Sensor	Accuracy.	Nr of wires	Isolator	Time constant	Temperature range
31132-51 •	Pt 100 Ω to 0°C	±0,12 Ω	3	Polymide insulated + Alu face	0,15 s	-20/+177°C*
31132-52 •	Pt 100 Ω to 0°C	±0,12 Ω	4	Polymide insulated + Alu face	0,15 s	-20/+177°C*
31132-53 •	Pt 100 Ω to 0°C	±0,12 Ω	2	Polymide insulated + Alu face	0,15 s	-20/+177°C*

* For assembly without adhesive, operating temperature range : -200°C/+200°C

LAMINAR PLATINUM PROBES 5 MM X 15 MM

Sensing element Pt 100 Ω or Pt 1000Ω
 AWG 26 wire outputs Teflon lined
 One adhesive side for attachment.
 Thickness : 2 mm
 Options on request :
 • Without adhesive (-50°C / +200°C).
 • Wire length > 1000 mm.

P/N.	Sensor	Accuracy.	Nr of wires	Isolator	Time constant	Temperature range
31132-01 •	Pt 100 Ω to 0°C	±0,12 Ω	3	Polymide insulated	1 s	-20/+177°C*
31132-02 •	Pt 100 Ω to 0°C	±0,12 Ω	4	Polymide insulated	1 s	-20/+177°C**

* For assembly without adhesive, operating temperature : -50°C/+200°C

MINIATURE FLANGED PLATINUM PROBES Ø 4,8 X 6,4 MM

Sensing element: PT 100 ohm at 0°C Class B
 Vessel of tinned light alloy
 Output by insulated wire with PTFE length 900 mm
 These probes can be used whenever space is at a premium.
 Other possibilities on request
 Wire outputs without shielding braid
 Copper probes 100 ohm
 Nickel probes 120 ohm
 Miniature sensors equipped with an antifriction end.
 In this case, the load temperatures become:
 Resistance probe: -50/+260°C
 Wire outputs: without shielding braid
 Wire length >900 mm

P/N.	Captor	Accuracy.	Probe	Temperature range	Nr lead	Section of lead mm ²	Time constant
31123-04 •	Platinum 100 Ω to 0°C	±0,12 Ω	Simple	-50/+150°C	1 x 3	0,227	4 s
31123-09 •	Platinum 100 Ω to 0°C	±0,12 Ω	Double	-50/+150°C	2 x 3	0,089	4 s

Recommended installation:
 Use spring P/N 31123-99 and clip P/N 31123-98 or P/N 31123-97 to retain the miniature flanged probe in its hole

FASTENING ACCESSORIES

Spring P/N 31123-99
 - Stainless steel
 - Compressed length: 5.6 mm

Clip P/N: 31123-98 for single or double sensors with Teflon wire
 - Anticorrosion-treated carbon steel
 - To be used for drilling diameter: 7.92 + 0.2 mm

Clip P/N: 31123-97 for single or double sensors with Teflon wires + shielding braid
 - Anticorrosion treated carbon steel
 - To be used on drilling diameter: 7.92 + 0.2 mm

THERMOCOUPLES WITH HIGH TEMPERATURE EXTENSION CABLE

Class 2 thermocouples with ungrounded hot junctions, inside 316 L stainless steel sheath, with sealed end and 2 wires high temperature cable with metallic overbraid and connection thimbles
Maximum operation temperature : 350°C.

Other manufacturing capabilities : accuracy class 1, total sheath length from 50 up to 1000 mm, other cable length, bended sensor, possible fixing by compression fitting or mounting flange, other thermocouple type R, S, T...

P/N. J type	P/N. K type	Ø D (mm)	L (mm)	B (mm)	Weight (kg)
31066-01	31066-11	4,5	50	2500	0,05

31066-07	31066-17	6	550	2500	0,25

Other L or B lengths to order

FLEXIBLE MINERAL INSULATED THERMOCOUPLES WITH PVC EXTENSION CABLE

Class 2 thermocouples with ungrounded hot junctions, inside flexible mineral insulated 316L stainless steel sheath, with sealed end and 2 wires PVC insulated cable (90°C maxi) and connection thimbles

Other manufacturing capabilities : accuracy class 1, diameter 0,5 or 1 or 2 or 3 or 4,5 or 6 or 8 mm, total flexible sheath length from 100 up to 5000 mm, other cable length, adjustable compression fitting type 31271, other thermocouple types R, S, T..., ATEX approval EEx ia.

P/N.	T/C type	Ø D (mm)	Max. temp. (°C)	B (mm)	L (mm)	Weight (kg)

FLEXIBLE MINERAL INSULATED THERMOCOUPLES WITH HIGH TEMPERATURE EXTENSION CABLE

Class 2 thermocouples with ungrounded hot junctions inside flexible mineral insulated 316L (Type J) or Inconel 600 (Type K) stainless steel sheath, with sealed end and high temperature extension cable with metallic overbraid.

Max. temperature: 600°C (J type) and 1000°C (K type).

Max. cable temperature: 200°C. Fastening: use a type 31271 compression fitting.

P/N.TCJ	P/N.TCK	ØD (mm)	L (mm)
31080-02	31214-02	0,5	150
31080-11	31214-11	1	200
31080-12	31214-12	1	250

31080-32	31214-32	3	250

Other manufacturing capabilities : accuracy class 1, diameter 0,5 or 1 or 2 or 3 or 4,5 or 6 or 8 mm, total flexible sheath length from 100 up to 5000 mm, other cable length, adjustable compression fitting type 31271.. R S T thermocouple type EExia, other thermocouple types R, S, T..., ATEX approval EEx ia.

FLEXIBLE MINERAL INSULATED THERMOCOUPLES WITH CONNECTOR AND PVC EXTENSION CABLE

Class 2 thermocouples with ungrounded hot junctions inside flexible mineral insulated 316L (Type J) or Inconel 600 (Type K) stainless steel sheath, with an electrical plug, and with an optional shielded PVC extension cable.

Maximum operation temperature : 600°C (TC J) or 1000°C (TCK), 200°C on the connector and 90°C on the cable.

P/N.TCJ	P/N.TCK	ØD (mm)	A (mm)	U (mm)	Optional connector	Weight (kg)

A = "L" if there is no connector.

A = "G" if there is connector.

THERMOCOUPLES WITH IP65 OFFSET ALUMINIUM HEAD

Class 2 thermocouples with ungrounded hot junctions inside 304L (Type J) or Inconel 600 (Type K) stainless steel sheath. Electrical connection by 2 poles terminal blocks inside an IP 65 offset aluminium head, epoxy painted, with compression gland for cable dia 4 to 15 mm. Spring loaded terminals, with a 8 mm clearance (the L1 dimension is corresponding to the half compression of the spring) Offset 316 L nipple 1/2" NPT threaded fitting

Max operating temperature : 600°C (TC J) or 1000°C (TCK), and 80°C on the head

P/N. J type	P/N. K type	Ø D (mm)	L1 (mm)	L2 (mm)

	31075-09	6	100	108
	31075-10	6	150	108
	31075-11	6	200	108
	31075-12	6	250	108

THERMOCOUPLES

FLEXIBLE MINERAL INSULATED THERMOCOUPLES - Ex d - IP65

Class 2 thermocouples with ungrounded hot junctions inside flexible mineral insulated 316L (Type J) or Inconel 600 (Type K) stainless steel sheath. Electrical connection by 2 poles terminal blocks inside an IP65 EXPLOSION PROOF head Marking : II 2 G Ex d IIC T6 with a compression gland for cable dia 8 mm. 1/2" NPT threaded fitting welded below the head
 Maximum operating temperature : 600°C (TC J) or 1000°C (TC K),
 Temperature range : - 20 to + 80°C on the head
 Other manufacturing capabilities : accuracy class 1, diameter 3 or 4,5 or 6 or 8 mm, total flexible sheath length from 100 up to 1000 mm, other thermocouple types R,S,T..., 4/20 mA transmitter installed inside the head.

P/N. J type	P/N. K type	Ø D (mm)	L (mm)
31068-10	31068-13	3	100
31068-11	31068-14	3	150
31068-12	31068-15	3	200
	31068-16	6	100
	31068-17	6	150
	31068-18	6	200

Usable in hazardous areas (ambient temperature from -20 °C up to 80°C, relative humidity 95 % maximum).
 Certificate: **LCIE 02 ATEX 6097X** some precautions must be taken for using this device. Consult us or read the instruction manual

THERMOCOUPLES WITH OFFSET - Ex d - IP65

Class 2 thermocouples with ungrounded hot junctions inside 304L (Type J) or Inconel 600 (Type K) stainless steel sheath. Electrical connection by 2 poles terminal blocks inside an IP 65 EXPLOSION PROOF head Marking : II 2 G Ex d IIC T6 with a compression gland for cable dia 8 mm.
 Offset 316 L nipple 1/2" NPT threaded fitting
 Maximum operating temperature : 600°C (TCJ) or 1000°C (TCK),
 Temperature range : - 20 to + 80°C on the head
 Other manufacturing capabilities : accuracy class 1, diameter 3 or 4,5 or 6 or 8 mm, total flexible sheath length from 100 up to 1000 mm, other thermocouple types R,S,T..., 4/20 mA transmitter installed inside the head.

THERMOCOUPLES

CLAMPING PROBES FOR SURFACE TEMPERATURE MEASUREMENT

These sensors are dedicated to the temperature measurement of pipes (eg : for heating systems). Protective sheath in stainless steel 316L, diameter 5 mm, end thinned for a best contact. 2 wires (for TC) or 3 (for PT100) insulated conductors teflon / teflon, 1 m length

On request :
Other clamping diameters up to 2 meters.
Available in ATEX Gas and Dust.

REF.	Sensort	Range (°C)
31711-03	PT100 probe	-50/+200
31711-04	Thermocouple K	-50/+400

ADJUSTABLE FASTENING FLANGES and FASTENING CLAMP

Flange for fastening 2 to 8 mm Ø probes to a duct wall or an insulating jacket. 3 fixing holes, Ø 5mm.

Clamp for fastening a 6 mm Ø probe to the flat wall of a low-pressure air duct. AISI 304L=Din 1.4306

To be sealed after assembly with a heat-resistant silicone mastic.

P/N.	Article	Material
31979-01	Flange	Painted steel
31979-11	Flange	Stainless steel 304 L
31678-00	Clamp	Stainless steel 304 L

EXTENSION CABLES FOR PLATINUM-PLATED PROBES

Flexible multicore cables for connecting PT probes to temperature controllers. Type 31455 is covered in metal braid. Supplied in 25`m rolls.

P/N.	Nrr. of wires	Section (mm ²)	Max. ambient	Outside Ø (mm)	Insulator	Weight (kg)
31450-25	3	0,14	80°C	3	PVC	0,25

POWER SUPPLIES FOR CONVERTER P/N.30713-01

These power supplies are particularly suitable for the implementation of converters with 2 wires (loop powered 4-20 mA)..
The isolation between each output eliminates ground loop problems that can disturb the measurement
The coupling in serial or parallel increases the current or voltage output .

- Assembly : DIN rail unit .
- Outputs : from 1 up to 8, presetting voltage 24 Vdc, 30 mA (other voltages are available).
- Permanent protection against short circuits.
- Insulation voltage between 1500 to 3000 V.
- Green LED when the power is switch on.

Input: 230Vac + / - 10% (other voltages available from 11 to 265 V AC or DC).

Output: on request from 0 to 24V DC (power 1watt/sortie), higher voltage is possible with parallel outputs (maximum 8x24V).

CONVERTERS AND MEASUREMENT UNITS

PROGRAMMABLE CONVERTERS FOR ROD HEAD P/N. 31712-00

31712-00 type are digital converters for a rod head using the 2-wire technique

Input : PT 100 ohm or thermocouple J K T R S B or mv

Output : 4/20 mA programmable for scale, response time and input type

Linearization, cold solder compensation and line resistance compensation incorporated into the converter.

Power supply between 9 and 40 Vdc with load resistance at 24 Vdc 750 ohm

Operating temperature range: -30 °C + 85 °C

Attaching centre distance 33 mm, 7 mm central role to accommodate sensor wires

Connection by screw-on terminal with 2.5 mm² capacity.

Indication of power supply presence by LED

Protection against polarity reversal

Protection from shock and vibration (silicone coating resin)

Other production : version with galvanic insulation, hart protocol

PROGRAMMABLE FIELD CONVERTERS WITH LOCAL DISPLAY P/N.31713-00

31713-00 type are 4/20 mA programmable converters using the two-wire technique with a local display assembled in an IP 65 epoxy painted aluminum case

Input : thermocouple JKTRSB with PT 100 Ohm probe .

Output : 4/20 mA programmable for scale, response time and input type

LCD display of extended temperature (4 digits) Resolution 10 000 points

Linearization, cold solder compensation and line resistance compensation incorporated into the converter.

Power supply between 12 and 40 Vdc with load resistance at 24 Vdc 550 ohm.

Operating temperature range: -20 °C + 60 °C

Connection by screw-on terminal with 2.5 mm² capacity. Protection against polarity reversal

IP 65 epoxy painted aluminum case with electrical output by PG 16 g cable gland for 7/12 mm

Process assembly by 1/2" cylindrical gas threading

MULTI GENERAL MEASUREMENT UNITS TYPE 31714

Assembly : - plug-in type, case 96 x 96 x 150 mm

Configurable inputs : - : 4,8,12 inputs, according to the P/N above (identical configuration for all the channels).

- Pt100 2 or 3 wires, linearised
- Compensated and linearised thermocouple
- mV, mA, ohm

Configurable alarms : - 2 configurable alarms for each channels

- detection of probe breakage and of measurement threshold

Relays : - 2 relays for all the channels

- inverter relay, potential free

Display : - 4 digits LCD 7 segments, 10 000 points

- display of measurement, fixed point, scrolling, alarm threshold adjustments

Power supply : - 230 Vac: other voltage to be defined on order

Insulation : - power supply/input/relay 1500 Vac

- input/output 250 Vac

Parameter settings : - RS232 link (cord not supplied, on request)

P/N.	Input nbr.
31714-04	4
31714-08	8
31714-12	12

Application: centralised supervision and monitoring of temperature

Advantage: compact, low cost.

GENERAL-PURPOSE DIGITAL CONVERTERS P/N.31715-00

Assembly : - DIN rail unit: 23 x 100 x 120 mm

Configurable input : - Pt100, thermocouple

- mV, V, mA, ohm
- sensor power supply, potentiometer, stress gauge
- frequency: TTL, Namur, NPN, PNP,

Special functions : - square root extraction

- customised linearisation

Configurable output : - 1 current output 0...4.... 20 mA, voltage 0 to 10 V

Second isolated output : - option (CNL 35L/S2)

Configurable relays (as an option) : - max 4 relays, potential free

- detection of probe breakage and of measurement threshold

Power supply : - 20 to 265 Vac-dc, or 9 to 30 Vdc on request

Insulation : - input/output 1500 Vac power supply

Parameter settings : - RS232 link or front panel

Application: measurement of industrial signals, temperature, speed, weight, position, flow rate, etc

Advantage: wide range of applications fully configurable by the user

TUBES OR PROBES SEALING

APPLICATIONS

- Power
- Testing
- Instrumentation
- Regulation

USES

-240°C to + 870°C

Liquid

690 bar*

Gas

690 bar*

-5.10⁻⁶ Hg

31270 TYPE

This type Glands seal a single tube or probe. Featuring a metal-to-metal seal rather than our standard soft sealing technology, glands are used where a joint must be opened and released in the same setting. Their unique design forms the seal well within the vessel housing to provide superior performance in high vibration applications.

Metal to metal tube and probe sealing.

Multiple sensors and probe glands

31272 TYPE

Glands enable multiple thermocouples, thermistor probes, RTD's, tubes or other sensors to pass through a single gland. Each probe is electrically isolated and its immersion length is adjustable. Elements may be individually adjusted, removed and replaced.

31273 TYPE

Can often be used when the other type of probe glands are not suitable - they can be customized to accommodate non-standard sizes and a mixture of element sizes, for special hole patterns and for a higher density of elements than can be accommodated by other types of sealing assemblies.

Multiple sensors and probe glands, for non-standard sizes and custom configurations - glands

Single and multiple sensor glands with split internal components

31171/31172 TYPE

These glands are used when the elements to be sealed can pass through the gland vessel but not through the internal components. Their process ends may be of a larger diameter than at the sealing points, there may be connectors to pass through the gland, elements may be long and difficult to handle, or, there are other installation constraints.

31275 TYPE

These power lead glands have kapton insulated copper wire in a number of wire sizes. They are used to feed through power leads to autoclaves and sterilisers, transformers, motors and heaters. Wires are individually marked at both ends and are easily installed or replaced.

Insulated wire sealing

Single electrode with ceramic insulators 31277 glands; and with Teflon insulator/sealing - 31278 glands

31277/31278 TYPE

These single conductor sealing glands are used for high voltage and/or high current feedthroughs to vacuum chambers, autoclaves, transformers, motor enclosures, reactor vessels and environmental chambers. Type 31277 are available with a choice of sealants and have ceramic insulators. Max.rating 2kV/400A. Type 31278 glands employ a single-piece, Teflon, combined insulator/sealant component to surround the electrode. Max.rating 8kV/525A..

31173 TYPE

These feedthrough assemblies comprise a high-density, wire feedthrough mounted in a sealing gland. A Teflon-lined, stainless steel tube is swaged over 12, 24, 40 or 60, solid, Teflon-coated, copper and/or thermocouple material wires to make the continuous wire feedthrough for thermocouples, RTD's and low voltage instrumentation.

High density, mechanically sealed, wire feedthroughs using single or multiple probe glands

TUBES OR PROBES SEALING

- SEALS A SINGLE ELEMENT - USUALLY A TUBE, PROBE OR SENSOR
- FOR GAS OR LIQUID APPLICATIONS
- PRESSURE : Vacuum to 690 bar
- TEMPERATURE : -240°C to +870°C
- FIELD ADJUSTABLE
- REPLACEABLE SEALANT FOR REPEATED USE OF FITTING
- STAINLESS STEEL BODY, CAP AND FOLLOWER
- SIMPLE ASSEMBLY - INSERT ELEMENT, TORQUE CAP

TYPE 31271

SEALANT SELECTION GUIDE

31271 type glands are designed for sealing a single element, usually a tube or a probe, where it crosses a pressure or environmental boundary. Glands are available to carry elements.

Applications for glands include : Pressure and vacuum sealing of thermocouples, RTD's, dial-type thermometers, thermistor probes, glass thermometers, thermowells (pockets) including those made from fragile materials, capillary tubes and other sensor elements.

Sealant (sealant code)	Temperature range	Pressure range at 20°C
Neoprene (N)	-40°C to +93°C	Vacuum to 345 bar
Viton (V)	-20°C to +232°C	Vacuum to 690 bar
Teflon (T)	-185°C to + 232°C	Vacuum to 220 bar
Lava (L)	-185°C to +870°C	1bar to 690 bar
Grafoil (G)	-240°C to +495°C (to +1650°C in a reducing atmos.)	Vacuum to 690 bar

CHOOSING A CONTROLLER

The VULCANIC range of controllers covers the great majority of industry requirements. Following steps will help you to define the right controller.

- 1) define the desired control precision: if $\pm 5^\circ\text{C}$, choose an 'ON/OFF' controller ; for greater precision, consider a 'PID' appliance.
- 2) Know what kind of temperature input is used : PT100 - Thermocouple - Current - Voltage.
- 3) Know what kind of power supply device is to be driven, so as to choose the type of control output (usually called 'Output P/N.1):
 - for a contactor, choose a controller with a 'relay' output
 - for a power unit, choose a controller with a "numeric" output
 - for a device with an analogic input (eg : motorised valve) choose a controller with an "Analogic" output.
- 4) Know what use will be made of the auxiliary outputs (usually called 'Output N°2 and N°3') : choose a "Relay" output to drive an alarm, "Current or Voltage" for a measurement repeater, and/or "Cold" output 2 to drive an ON/OFF valve for a cooling system.

48x48 ON/OFF CONTROLLERS WITH 3-DIGIT DISPLAY

Class 0,2 controllers, large-size 3 digit display, lockable setting, configurable input (PT100 - J-, K-, T-type thermocouples), panel mounted or fastened to DIN rail. Supplied pre-set.

1 relay output, double-throw contacts, 2A/240V.

Supply voltage : 90 to 264 V - 50/60 Hz.

Weight 0,2 kg.

Depth : 100mm.

P/N.	Input	Temperature Range (°C)
30633-01	PT 100	-50 to 100°C
30633-51	PT 100	0 to 100°
30633-41	PT 100	-50 to 300°C
30633-12	TC/J	0 to 200°C
30633-22	TC/J	0 to 400°C
30633-02	TC/J	0 to 600°C
30633-03	TC/K	0 to 800°C

48x48 AUTOTUNE CONFIGURABLE PID TEMPERATURE CONTROLLERS

Autotune PID temperature controllers with 3 outputs.

Configurable input : RTD (PT100) or thermocouples type B/J/K/L/M/R/S/T, or analogic voltage 0/10 V, 2/10 V, 0/5 V, 1/5 V, 0 / 50 mV, 1/50 mV, or loop powered analogic current 0/20 mA, 4/20 mA.

Main output on request : SPDT relay 2 A / 240 VAC (on a resistive load) and pulse wave modulation 0/10 VDC for SSR (period 0,25 to 512 seconds / 20 mA max) configurable by strap, analog voltage 0/5 V, 0/10 V, 2/10 V or analogic current 0/20 mA, 4/20 mA (powered in 24 VDC).

Output 2 and 3 on request : same as output 1. Optional circuit board A : see table hereafter.

On/off optional control with adjustable differential, simultaneous display of measurement (red LED 8 mm high) and setpoint (green LED 6 mm high).

Selftuning available during switch on operation.

Supply voltage 100 to 240 VAC +/- 10% 50/60 Hz. Class 0,1.

Front panel to IP 66. Mass 0,21 kg.

Removable casing depth 110 mm, for cutting 45 X 45 mm.

Depth : 100mm.

Microcards for reconfiguring the appliance (they are used for PID controllers type 30656 or 30881)

30656-92	SPDT relay and PWM circuit board for main output
30656-96	Analog circuit board for main output (voltage or current)
30656-90	SPDT relay circuit board for output 2 and 3
30656-91	Analog circuit board for output 2 or 3 (voltage or current)
30656-99	PWM circuit board for output 2 or 3
30656-93	RS 485 circuit board, MODBUS or ASCII for option A
30656-97	Remote analog setpoint 0/5 VDC or 0/10 VDC or 2/10 VDC or 0/20mA or 4/20mA, for option A
30656-95	Setpoint selection by single pole contact for option A
30656-98	Power supply 24 VDC / 20 mA for cooled output

P/N.	Old P/N.	Input	Temp.* range (°C)	Control output	Output 2	Output 3

48x96 AUTOTUNE CONFIGURABLE PID TEMPERATURE CONTROLLERS

Autotune PID temperature controllers with 3 outputs.

Configurable input : RTD (PT100) or thermocouples type B/J/K/L/M/R/S/T, or analog voltage 0/10 V, 2/10 V, 0/5 V, 1/5 V, 0 / 50 mV, 1/50 mV, or loop powered analogic current 0/20 mA, 4/20 mA.

Main output on request : SPDT relay 2 A / 240 VAC (on a resistive load) and pulse wave modulation 0/10 VDC for SSR (period 0,25 to 512 seconds / 20 mA max) configurable by strap, analog voltage 0/5 V, 0/10 V, 2/10 V or analogic current 0/20 mA, 4/20 mA (powered in 24 VDC).

Output 2 and 3 on request : same as output 1.

Optional circuit boards A and B : see table above.

On/off optional control with adjustable differential, simultaneous display of measurement (red LED 8 mm high) and setpoint (green LED 6 mm high).

Selftuning available during switch on operation.

Supply voltage 100 to 240 VAC +/- 10% 50/60 Hz. Class 0,1.

Front panel to IP 66. Mass 0,27 kg.

Removable casing depth 100 mm, for cutting 45 X 92 mm.

P/N.	Input	Temperature range (°C)	Control output	Output 2	Output 3

Microcards for reconfiguring the appliance

30881-90 Circuit board for analogic remote setpoint : 0/5 VDC, 0/10 VDC, 2/10 VDC or 0/ 20 mA or 4/ 20 mA for option B, with local / remote switching by contact out of potential.

TEMPERATURE DISPLAYS AND CONTROLLERS

48 x 24 NUMERIC TEMPERATURE INDICATOR

Process magnitude or temperature indicators.

Input configurable for current :

(active or passive, zero assessed 20mA, 4/20 mA or other)

For low-level voltage (mV up to 2000) or high-level voltage (V up to 200, 0/10 V for instance), Potentiometer (200 ohm minimum), Stress gauges (5 V)

Frequency (0.25 Hz to 100 kHz), PT100 (2 or 3 or 4 wires) and thermocouples (B, E, J, K, R, S, T, N, W3 and W5)

Option 2 threshold alarm outputs by 260V/1A resistive inverter relay

Analogue measurement copy option, galvanic installation:

current-configurable (active 0/20 mA, 4/20 mA or other)

or for low-level voltage 0/10V (or other).

Display of four red digits + unit (configurable for °C, bar, rpm, lpm)

General-purpose power supply, 20 to 265 Vac or

DC. Connection to screw-on plug-in terminals

Depth: 84 mm, weight 0.1 8 kg, designed for recessing into a cutout measuring 92.5 x 42.5 mm.

P/N.

30828-01 basic model without options

30828-02 model equipped with an analogue output

30828-03 model equipped with two alarm outputs and one analogue output

30828-04 kit: IP65 flexible protection

IP40 front panel: convertible to IP65 by the addition of flexible protection.

Other manufacturing possibilities: MODBUS / PROFIBUS instead of analogic output.

48x48 DIGITAL ON/OFF CONTROLLER

These indicators are smaller than the 48x96 devices but still offer similar functions to the larger models. Supplied pre-set and ready for use (as are most of our measuring devices), they can be reconfigured by the user if necessary. Universal thermocouple input, PT 100, mA and mV inputs.

Large red 4-digits display, 2 alarms on SPDT 2A at 120/240 VAC relays and measurement repeater (4/20mA) on certain models.

IP65 front face, supply voltage: 100 to 240 VAC.

Alarm status shown by LEDs on the front face.

Depth : 110mm.

P/N.

IP65 PROTECTIVE FRONT FACES FOR CONTROLLERS and ADAPTOR PLATES

IP 65 front faces for 48x48 and 48x96 controllers and 96x48 indicators. These panels have transparent hinges and covers and allow upgrading to IP65 of any appliance which fits a standard aperture of 45 x 45 (for 48 x 48 models) or 45 x 92 (for 48 x 96 models).

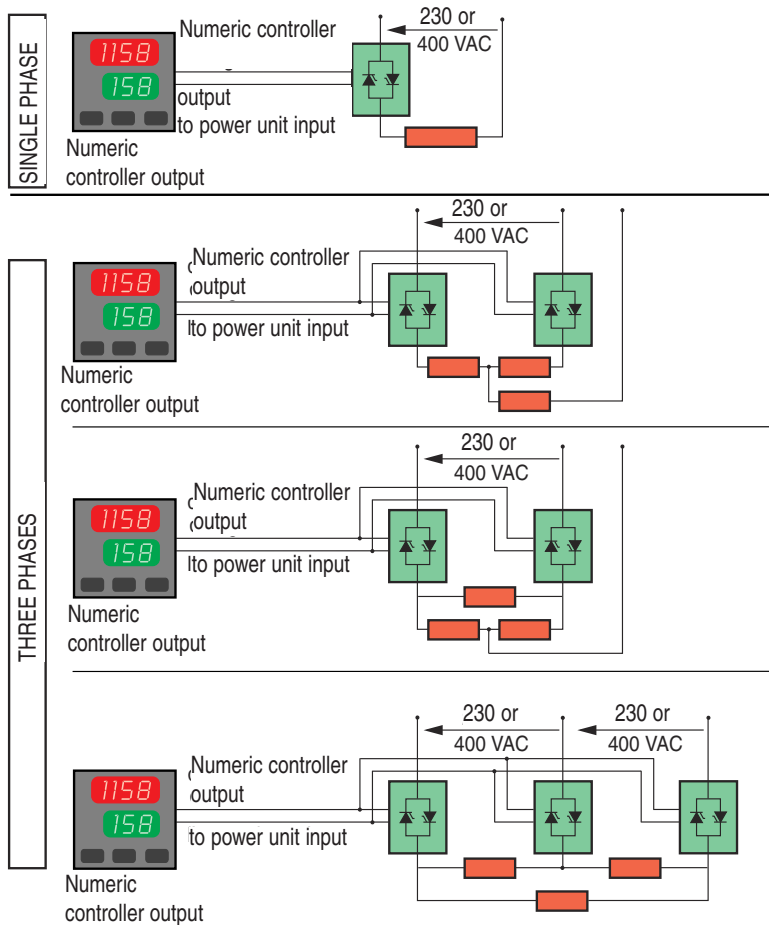

P/N.

P/N.	Purpose	Original fitting	Controller format
34848-99	protection		48x48
34896-99	protection		48x96
34896-48	adaptor	48x96 --->	48x48
39696-48	adaptor	96x96 --->	48x48
39696-96	adaptor	96x96 --->	48x96

CONNECTION PRINCIPLE FOR SOLID STATE RELAYS

Nominal powers given in the table are valid for an ambient temperature of 45°C max. They take into account the power accuracy of heating elements and variations in power supply voltage.

	Max. current UP	Nominal power	
		Single phase	Three phase
115 V	15 A	1,4 kW	2,5 kW
	25 A	2,4 kW	4,1 kW
	45 A	4,3 kW	7,5 kW
	75 A	7,2 kW	12,4 kW
	125 A	12,0 kW	20,7 kW
	200 A	19,2 kW	33,2 kW
	275 A	26,4 kW	45,6 kW
230 V	15 A	3,0 kW	5,0 kW
	25 A	5,0 kW	8,3 kW
	45 A	8,6 kW	14,9 kW
	75 A	14,4 kW	24,9 kW
	125 A	24,0 kW	41,5 kW
	200 A	38,3 kW	66,3 kW
	275 A	52,7 kW	91,2 kW
400 V	15 A	5,0 kW	8,6 kW
	25 A	8,3 kW	14,3 kW
	45 A	15,0 kW	25,7 kW
	75 A	25,0 kW	43,0 kW
	125 A	41,7 kW	72,0 kW
	200 A	66,7 kW	115,0 kW
	275 A	91,7 kW	158,0 kW
400 A	133,3 kW	230,0 kW	
500 A	166,7 kW	288,0 kW	

15, 25 and 45 A SINGLE PHASE SOLID STATE RELAYS

Single phase thyristor power units designed to drive resistive loads of up to 45 A.

A range of compact appliances meeting present-day industry requirements, fitting to symmetrical DIN rail. Much better suited than contactors to drive electric heaters, power units have no moving parts, no wear, and no maintenance; they have a higher switching rate, allowing better control of the output power.

Steering signal : 0/4 to 0/30VDC numeric input from a controller with numeric output.

Operating principle: pulse control. The thyristors start conducting when the voltage is 0V and stop when current is at zero (no interference).

Thyristor protection by RC circuit + varistor and ultra-fast fuse supplied.

Operating voltage :40 to 440VAC at 47 to 70 Hz.

A 24 V generator is needed to polarise the steering signal for power units with 4/20 mA analogic input.

Steering signal: 0/4 to 30 VDC numeric input, to be driven by a controller with numeric output, for single and three phase use.

P/N.	Max. current	L (mm)
30330-15	15 A	30
30330-25	25 A	30
30330-45	45 A	52

	30330-97	15 A
	30330-98	25 A
	30330-99	45 A

Steering signal: 4/20 mA analogic input from a controller with 4/20 mA output,

for breaking off only 1 phase

P/N.	Max. current	L/H/P (mm)
30330-65	15 A	52x120x120
30330-75	25 A	52x120x120
30330-95	45 A	52x120x120

For breaking off 2 phases

P/N.	Max. current	L/H/P (mm)
30330-66	15 A	95x120x120
30330-76	25 A	95x120x120
30330-86	35 A	148x120x123
30330-96	45 A	148x120x159

For breaking off 3 phases

P/N.	Max. current	L/H/P (mm)
30330-67	15 A	123x120x120
30330-77	30 A	148x120x123
30330-87	45 A	148x138x123

THREE PHASE STATIC POWER UNITS FROM 75 à 500 A

These are thyristorized units capable of controlling 3-phase resistive load current levels according to a numeric input (0/5 à 0/30 VDC) or analogic input (0/10 VDC - 4/20 mA - 0/2,2 kohms), of a regulator.

Attaching to the back of the panel at a maximum temperature of 45°C.

Conduction by wave trains with energising at zero voltage and deenergizing at zero current without interference.

Load voltage : 24 à 440 VAC maxi.

These units have forced ventilation and a control card requiring a 230VAC single phase auxiliary power supply.

All the equipment is supplied with integrated ultrafast fuses.

Fixing distant			
	A	B	C
75A et 125A	96	290	104
200A	60	335	60
275A à 500A	222	495	222

Models equipped with load monitoring come with an integrated current sensor. They trip a contact in the event of an anomaly affecting a fuse, thyristor, phase, load.

P/N. with logic input	P/N. with configurable analogue input and load monitoring	I max	P.Nominal at 400 V 3P at 45°C	Size H x W x D (mm)	Weight (kg)

If you need a power input with an analog input without load monitoring, order a logic input family unit and a signal converter reference. P/N. 30290-01

ELECTROMECHANICAL POWER PROPORTION DEVICES

This device operates by the successive opening and closing of the power supply circuit with a period of around 20 seconds and a psychic ratio that is adjustable by a knob graduated from 0 to 100%. 230VAC single phase

Power supply ± 10% (2800 W maximum on resistive load) with voltage output and terminals for the connection of a display indicator light.

Bare model P/N. 9014-01 (weight 0,11 kg).

Fig. A

Model P/N.9014-02 • in protected case of aluminium alloy with the same properties as shown in A. fitted with switch and indicator light displaying the power supply of the load (weight 1kg).

ELECTRONIC POWER PROPORTIONER AND CONVERTER

The power proportioner P/N. 30290-03 is capable of controlling any type of static power unit of prosthetic relayed by means of a 0/100% potentiometer. Output signal : logic 0/10 VDC. Power supply : 240 VAC.

The signal converter P/N. 30290-01 using an analog signal (4/20mA, 0.20VDC, 0/10VDC, 2,2kΩ), can generate a logic signal with a variable cyclic ratio of 0 to 100% to control power units or static relays. Output signal : 0/10 VDC logic Power supply : 240 VAC.

Power supply voltage : 240 VAC +10% -15% 50/60 Hz.

READY TO USE POWER SUPPLY & CONTROL UNITS

READY TO USE POWER SUPPLY AND CONTROL UNITS

Why reinvent something that VULCANIC, the specialist, has already designed? Why design and build when VULCANIC has already done it for you. You save time and money, and you get a guaranteed result. Our power supply and control units are easy to install, quick to commission, and perfectly suited to our heating systems. Don't hesitate : choose the appliance which suits your installation – a few datas are enough to choose the right model :

- Supply voltage
- Power to be delivered
- Control mode: ON/OFF or PID
- Power supply device: contactor or PU (power unit: silent, and better suited to heating elements).
- Number of outputs : number of appliances to be connected in parallel. Delivered with drawing and usual manual

CONTROL UNITS CUSTOMIZED

VULCANIC offers you, at a very competitive price, a number of standard control units, some of which are available on stock within 24 hours. If in spite of everything you can't find the unit which suits your application in the following pages, describe it using the adjacent form and send the details to our control specialist, who will do the calculations.

Use:
Power: kW - **Voltage:** V single / three phases – **Number of control zones:** 1 / 2 / 3 / 4 and more
Control mode: on/off / PID / programmer - **Input:** Pt100 / J-type thermocouple / K-type thermocouple / current / voltage
Power supply device : Contactor / Power unit – **Number of outputs:** 1 / 2 / 3 / 4 and more.
Connected to a motor-pump or motor-fan unit: yes / no
-> Power: kW - **Voltage:** V single / three phases
Labelling and documentation in: French / English / German

CONTROL UNITS, PID 200W / 230V SINGLE PHASE/ 1A

Ready-to-use units for power supply and temperature control silicone heating panels, flexible heating elements, cartridge heaters, etc. These units are supplied in an IP53 metal box for wall mounting. They include a controller with IP65 front face, an on / off button with integral indicator light and load protection by fuse. Heating elements and probe are connected to a terminal block. Glands supplied.

Dimensions (mm): L = 200- H = 250 - D = 136.

P/N.	Input	Controller	Temp range
32032-11	Pt100	PID	0/+300°C
32032-12	TC/J	PID	0/+450°C
32032-13	TC/K	PID	0/+1200°C

CONTROL UNITS, 3 AND 5 KW / 230V SINGLE PHASE

Ready-to-use units for power supply and temperature control silicone heating panels, flexible heating elements, cartridge heaters, etc. These units are supplied in an IP55 polyamid box. They are equipped with an auto-adaptive PID controller type 30656 class 0.2 with a alarm available, a remote controle and have 2 terminals for external safety circuit

These units are supplied in an IP55 metal box for wall mounting. They include a controller with IP65 front face, an on / off button with integral indicator light and load protection by fuse. Heating elements and probe are connected to a terminal block. Glands supplied.

The simple control unit have 2 terminals for external safety circuit.

The control unit with integral safety temperature cut-out have 2 terminals for external safety circuit, and a safety temperature cut-out (K-type thermocouple input) to protect the heating elements from damage due to overheating.

Dimensions (mm): L = 400 - H = 400 - D = 200.

Technical advice: Solid-state relay models are preferable.

P/N.	P max. (kW)	Input	Controller	Supply device	Temp. range
32045-20	3	TC/J	PID	UP SSR	0/+450°C
32045-21	3	TC/K	PID	UP SSR	0/+1200°C
32045-22	3	Pt100	PID	UP SSR	-50/+350°C
P/N.	P max. (kW)	Input	Controller	Supply device	Temp. range
32045-03	3	TC/J	PID	Solid-state relay	0/450°C
32045-12	3	Pt100	PID	Solid-state relay	0/300°C

32045-53	5	TC/J	PID	Solid-state relay	0/450°C
32045-61	5	Pt100	PID	Contactor	0/300°C
32045-62	5	Pt100	PID	Solid-state relay	0/300°C

WITH INTEGRAL SAFETY TEMPERATURE CUT-OUT

Only for heating systems fitted with a safety K-type thermocouple

P/N.	P max. (kW)	Input	Controller	Device	Temp. range
32045-54	5	TC/J	PID	Solid-state relay	0/450°C
32045-55	5	Pt100	PID	Solid-state relay	0/300°C

The model with a J-type thermocouple input can be reconfigured on plant to a K-type input.

THERMOSTAT CONTROL UNITS

Ready-to-use units for power supply and temperature control silicone heating panels, flexible heating elements, cartridge heaters, etc. These units are supplied in an IP55 metal box for wall mounting. They include front face an on / off button with integral indicator light and load protection by fuse. Heating elements are connected to a terminal block. Glands supplied.

P/N.	P max. (kW)	Voltage 3P	Supply device	Dimensions (mm)		
				Width	Height	Depth
32032-01	18	400	Contactors	300	400	200
32032-02	45	400	Contactors	400	400	200

CONTROL UNITS, 8,6 kW to 158 kW at 400V, 3 phases with controller

Control units for temperature control of circulation liquid heaters, immersion heaters, fan heaters and duct heaters. Metal IP53 case.

They comprise a controller with IP65 front face, an isolating switch + fuses + power supply device (and its safety device, if a static power unit) + on / off indication + heating indications + safety fuses + emergency stop button + red default indicator + reset push button.

2 terminals for external safety circuit.

External safety module on 2 inputs terminal.

Pre-set controller.

Heating elements and probe are connected to a terminal block. Cable entry to box via supplied glands.

INSULATION AND CONNECTION ACCESSORIES

NICKEL-CHROME RESISTANCE WIRE

Resistive wires for making up wire-bare heating elements. They are generally used for making coil-wound heating elements and their resistivity of $1,08 \Omega \text{ mm}^2/\text{m}$ hardly changes at all with temperature. Their ends should be welded to steel or stainless steel pins which act as unheated conductors; they can equally well be doubled and twisted.

These reference numbers are for 10m lengths.
Order x P/N. to receive x times 10 m of wire.

P/N.	Wire Ø (mm)	Resistance (Ω/m) ±5%	Weight (kg)
4503-06	0,40	8,59	0,010
4503-07	0,50	5,5	0,016

STRANDED NICKEL WIRE IN A KAPTON SHEATH

These conductors are made of 0,3 mm Ø pure nickel wires surrounded by an insulating sheath and are suited for connecting electrical heating elements at ambient temperatures up to 350°C (400°C peak temperature).

P/N.	Section (mm ²)	Outside Ø wire (mm)	Inside Ø sheath (mm)	Roll length (m)	I _{max} at 80°C (A)	Weight (kg)
2527-01	2,5	2	2,5	20	15	0,625
2527-02	4	2,6	3	20	22	1,060

EYELET TERMINALS IN PURE NICKEL

Allow nickel or copper leads to be connected to threaded terminals at an ambient temperature up to 650°C. Fixing by brazing or crimping

P/N.	Terminal Ø (mm)	Section (mm ²)	Pack of	Weight (kg)
55340-10	5	1,25 à 2,5	10	0,012
55341-10	6	1,25 à 2,5	10	0,016
55342-10	5	3 à 6	10	0,015
55343-10	6	3 à 6	10	0,020

STEATITE BEADS

Steatite beads allowing insulation of bare stranded ropes or under fibreglass insulator sheath or under kapton sheath, in 350 to 450°C environment.

To make an extension cord for infrared emitters type 6020, use the beads P/N 2530-03. A similar extension cord can be made up from beads P/N 2530-05 for ceramic insulated strip heaters type 4033.

P/N.	Ø inner (mm)	Ø outer (mm)	Length unit. (mm)	Nb of beads per m.	Nb of beads per packet	Weight (kg)
2530-01	1	3	3	390	4000	0,3
2530-02	1,5	4	4	280	3300	0,3

2530-07	6,7	10,5	9	140	1150	1

CERAMIC TERMINALS

Enable the interconnection between two conductors (often inside protective boxes) at ambient temperatures up to 200°C. Bipolar models for single phase and tripolar models for 3 phases or single phase + earth.

P/N.	Type (mm)	Dimensions (mm ²)	Section (mm)	Ø max (A)	l	Packaging	Weight (kg)

TEMPERATURE CONTROL UNITS

VULCATHERM®

Sensors on heating elements guarantee long life service and performance of fluids

Lowest inertia for quick response time

Installation in ATEX Area see on page 144

High-energy efficiency and accurate temperature control with central management system (C.M.S/SGC)

Cooling control by Solenoid valve on/off or proportional

Easy opening and reduced maintenance

Heating control by 100% thyristor units or step control (combination of relays and thyristors)

Remote control with analogical or numerical signals (RS, IP)

TEMPERATURE CONTROL UNITS VULCATHERM® WATER MEDIUM

ATMOSPHERIC : WATER 90°C MAX

Vulcatherm® HOT

Heat, cool and control a closed fluid loop (hot water 90°C maxi)

10811

Atmospheric
in closed loop

Money saving - Heavy duty
Reduced maintenance

Applications :

- Elastomer moulding
- Polymer moulding
- Thermoforming
- Thermo-compression
- Tracing...

Characteristics :

- 1 electrical heater with temperature sensors
- 1 pump
- 1 atmospheric expansion tank
- 1 electrical cabinet with integrated central management system (CMS/SGC ECO)
- Sensors for control and safety
- Painted frame equipped with castors

Features :

- Automatic filling by water network supply
- Automatic air bleeding
- Electrical supply 400VAC 3 Phases + E

Layout

Vulcatherm® HOT / COLD

Heat, cool and control a closed fluid loop (hot water 90°C maxi). Hot water in process is cooled by heat exchanger connector to industrial water network.

10800

Atmospheric
in open loop

Money saving - Heavy duty
Stable control

Applications :

- Process with high frequency tools rotation
- Process with vacuum system
- Extrusion and injection of polymers...

Characteristics :

- 1 electrical heater
- 1 heat exchanger (for cooling)
- 1 immersible pump
- 1 atmospheric tank
- 1 electrical cabinet with integrated controller
- Sensors for control and safety
- Painted frame equipped with castors

Features :

- Automatic filling by water network supply
- Self priming and automatic air bleeding
- Electrical supply 400VAC 3 Phases + E

10801

Atmospheric
in closed loop

Accurate - Fast
Reduced maintenance

Applications :

- Elastomer moulding
- Polymer moulding
- Injection, extrusion
- Heating jacket
- Tracing...

Characteristics :

- 1 electrical heater with temperature sensors
- 1 heat exchanger (for cooling)
- 1 pump
- 1 atmospheric expansion tank
- 1 electrical cabinet with integrated central management system (CMS/SGC ECO)
- Sensors for control and safety
- Painted frame equipped with castors

Features :

- Automatic filling by water network supply
- Automatic air bleeding
- Electrical supply 400VAC 3 Phases + E

- Power : 75 up to 245 kW
- Centrifugal pump with magnetic seal
- Pump with high flow rate
- See all options on page 144

TEMPERATURE CONTROL UNITS VULCATHERM® WATER MEDIUM

ATMOSPHERIC : WATER 90°C MAX Vulcatherm® HOT / AIR COOLED 10831

Atmospheric
in closed loop

High performance - Compact - Accurate
Fast - Reduced maintenance

Heat, cool and control a water closed loop from 40°C to 90°C. Hot water in process is cooled through an air exchanger + fan.
Fully available and designed for process without water supply.

Applications :

- Elastomer moulding
- Polymer moulding
- Injection, extrusion
- Heating jacket
- Tracing ...

Features :

- Water loop
- Electrical supply 400VAC 3 Phases + N + E

Characteristics:

- 1 electrical heater with sensor
- 1 air exchanger (air 32°C maxi)
- 1 pump
- 1 atmospheric expansion tank
- 1 central management system (CMS/SGC ECO)
- Sensors for control and safety
- Painted frame equipped with castors

Vulcatherm® HOT / COLD 10821 ❄️

Atmospheric
in closed loop

High performance - Compact - Accurate
Fast - Reduced maintenance

Heat, cool and control a water + glycol loop from -20°C to 90°C. Hot water in process is cooled by integrated refrigerating unit.

Applications :

- Process with a wide temperature range
- Crystallizer
- Chemical reactor
- Climatic chamber
- Test benches

Characteristics :

- 1 electrical heaters with sensor
- 1 evaporator exchanger
- 1 condenser water cooled
- 1 pump
- 1 refrigerating compressor
- Electronic expansion valve
- 1 atmospheric expansion tank
- 1 central management system (CMS/SGC V2)
- Sensors for control and safety
- Painted frame equipped with castors

FOR TOOLS WORKING UNDER PRESSURE

Heat and control a water closed loop (water 90°C maxi).

Applications :

- Elasmoter moulding
- Polymer moulding
- Thermoforming
- Thermo-compression
- Tracing ...

Characteristics :

- 1 electrical heater
- 1 pump
- 1 electrical cabinet with integrated PID controller
- Sensors for control and safety
- Painted frame equipped with castors

Features :

- Automatic filling by water network
- Automatic air bleeding
- Electrical supply 400VAC 3 Phases + E
- Connection to pressurised water network can be achieved via our ref 10804-99 supplied as an option

Heat and control a closed water loop (hot water 90°C maxi). Hot water in process is cooled by an exchanger connected to water network supply.

Applications :

- Elasmoter moulding
- Polymer moulding
- Thermoforming
- Tools working under pressure ...

Characteristics :

- 1 electrical heater
- 1 exchanger hot cold (water / water)
- 1 pump
- 1 electrical cabinet with integrated PID controller
- Sensors for control and safety
- Painted frame equipped with castors

Features :

- Automatic filling by water network
- Automatic air bleeding
- Electrical supply 400VAC 3 Phases + E
- Connection to pressurised water network can be achieved via our ref 10804-99 supplied as an option

TEMPERATURE CONTROL UNITS VULCATHERM® WATER MEDIUM

PRESSURISED AND EXPANSION CONTROL : WATER 110°C AND 140°C MAXI

Vulcatherm® HOT

10815
10812

Pressurisation and expansion
in customer water network

Money saving - High
performance - Heavy duty

Heat and control a closed water loop (hot water up to 140°C).

Applications :

- Autoclave, steriliser
- Mixer, melter ...
- Tools available to work under pressure 3 to 6 bar mini

Characteristics :

- 1 electrical heater with sensor
- 1 accumulator for expansion
- 1 centrifugal pump • 1 pressure reducer
- 1 safety valve (3 up to 7 bar)
- 1 electrical cabinet with integrated central management system (CMS/SGC ECO)
- Sensors for control and safety

Features :

- Automatic filling and pressurisation by customer water network (mini 1 bar)
- Electrical supply 400VAC 3 Phases + E

Vulcatherm® HOT / COLD

10805
10802

Pressurisation and expansion
in customer water network

Money saving - High
performance - Heavy duty

Heat and control a closed water loop (hot water up to 140°C). Hot water in process is cooled by a heat exchanger connected to water network supply.

Applications :

- Elastomer moulding
- Polymer moulding
- Thermoforming
- Tools available to work under pressure from 3 to 6 bar mini

Characteristics :

- 1 electrical heater with sensor
- 1 accumulator (for expansion)
- 1 exchanger hot/cold or direct injection (see table below)
- 1 pump • 1 pressure reducer
- 1 safety valve (3 up to 7 bar)
- 1 electrical cabinet with integrated central management system (CMS/SGC ECO)
- Sensors for control and safety
- Painted frame equipped with castors

Features :

- Automatic filling and pressurisation on customer water network (mini 3 bar)
- Automatic air bleeding
- Electrical supply 400VAC 3 Phases + E

TEMPERATURE CONTROL UNITS VULCATHERM® WATER MEDIUM

ELECTRICAL PRESSURISATION AND EXPANSION : WATER 110°C, 140°C AND 160°C MAXI

Vulcatherm® **HOT**

10816

*Pressurisation and expansion
in customer water network*

*Money saving - Compact
Reduced maintenance*

Heat and control a closed water loop (hot water up to 110°C and over heated water up to 160°C maxi).

Applications :

- Autoclave, steriliser
- Mixer, melter...
- Tools available to work under pressure 3 to 6 bar mini

Characteristics:

- 1 electrical heater with sensor
- 1 pressurised tank
- 1 tank for filling and atmospheric expansion
- 2 pumps
- 1 solenoid valve for pressure reducing
- 1 safety valve
- 1 electrical cabinet with integrated central management (**CMS/SGC ECO**)
- Sensors for control and safety
- Painted frame equipped with castors

Features :

- Automatic filling by water network
- Pressurisation, expansion and automatic air bleeding
- Electrical supply 400VAC 3 Phases + E

Vulcatherm® **HOT / COLD**

10806

*Pressurisation and expansion
in customer water network*

*Money saving - Compact
Reduced maintenance*

Heat, cool and control a closed water loop (hot water). The closed water loop is cooled down in a exchanger working under the customer water network.

Applications :

- Elastomer moulding
- Polymer moulding
- Thermoforming
- Tools available to work under pressure 3 to 6 bar mini

Characteristics :

- 1 electrical heater with sensor
- 1 pressurised tank
- 1 exchanger hot cold (reverse counter current) or direct injection (see table below)
- 1 filling and expansion tank
- 2 pumps
- 2 solenoid valves with 1 for pressure reducing
- 1 safety valve
- 1 electrical cabinet with integrated central management (**CMS/SGC ECO**)
- Sensors for control and safety
- Painted frame equipped with castors

Features :

- Automatic filling by water network
- Pressurisation, expansion and automatic air bleeding
- Electrical supply 400VAC 3 Phases + E

TEMPERATURE CONTROL UNITS VULCATHERM® WATER MEDIUM

ELECTRICAL PRESSURISATION AND EXPANSION : WATER 110°C AND 140°C MAXI

Vulcatherm® HOT / REFRIGERATED 10826 - 10846

Electrical pressurisation
and expansion

High performance - Compact - Accurate
Fast - Reduced maintenance

Heat, cool and control a water + glycol closed loop from -20°C to +140°C. Process fluid cooled by evaporator connected to refrigerating unit.

Water condenser

Applications :

- Wide temperature range process
- Crystallizer
- Chemical reactor
- Climatic chamber
- Test benches

Features :

- Water + glycol loop
- Manual filling
- Condenser cooled by air or water
- Electrical supply 400VAC 3 Phases + E (+ Neutral for air condenser)

Characteristics :

- 1 electrical heater with sensor
- 1 evaporator
- 1 condenser cooled by air or water
- 2 pumps
- 1 pressurisation tank
- 1 compressor
- 1 electronic expansion valve
- 1 atmospheric expansion tank
- 1 electrical cabinet with integrated central management (CMS/SGC V2)
- Sensors for control and safety
- Painted frame equipped with castor

Customised solutions :

- Others power available from 125 kW hot / 80kW cooling
- Centrifugal fan
- Temperatures available from -30°C up to +160°C
- See all options on page 144

TEMPERATURE CONTROL UNITS VULCATHERM® WATER MEDIUM

ELECTRICAL PRESSURISATION AND EXPANSION : WATER 110°C MAXI

Vulcatherm® HOT / AIR COOLING 10836

Electrical pressurisation
and expansion

High performance - Compact - Accurate - Fast
Wide temperature range - Reduced maintenance

Heat, cool and control a closed water loop from 40°C to 110°C. Hot process fluid is cooled through an air exchanger and a fan. **Designed for process without water supply**

Applications :

- Elastomer moulding
- Polymer moulding
- Injection, extrusion
- Jacket heat
- Tracing ...

Features :

- Water loop
- Electrical supply 400VAC 3 Phases + E

Characteristics :

- 1 electrical heater with temperature sensor
- 1 to 6 hot exchanger / air cold
- 1 to 3 helicoid fan
- 1 expansion tank
- 2 pumps
- 1 safety valve
- 1 electrical cabinet with integrated central management (CMS/SGC ECO)
- Sensors for control and safety
- Painted frame equipped with castors

Customised solutions :
• Power : 75 up to 245 kW
• See all options on page 144

ELECTRICAL PRESSURISATION AND EXPANSION : WATER 160°C MAXI

Heat, cool and control a water + glycol closed loop from 40°C to 160°C.

Hot process fluid is cooled through an air exchanger and a fan.

Designed for process without water supply.

Applications :

- Elastomer moulding
- Polymer moulding
- Injection, extrusion
- Jacket heat
- Tracing ...

Features :

- Water loop
- Electrical supply 400VAC 3 Phases + E

Characteristics :

- 1 electrical heater with sensor
- 1 tank for pressurisation
- 1 to 6 hot exchangers / air cold
- 1 to 3 helicoid fans
- 1 expansion tank
- 3 pumps + pressurisation + fluid superposition
- 1 solenoid valve
- 1 expansion valve
- 1 safety valve
- 1 electrical cabinet with integrated central management (CMS/SGC V3)
- Sensors for control and safety
- Painted frame equipped with castors

TEMPERATURE CONTROL UNITS VULCATHERM® OIL MEDIUM

ATMOSPHERIC : OIL 180°C, 250°C AND 300°C MAXI

Vulcatherm® HOT 10813

Atmospheric closed loop

Money saving - High performance
Heavy duty - Reduced maintenance

Heat and control a thermal fluid closed loop (synthetic or mineral oil up to 300°C).

Applications :

- Industrial process with high temperature and low pressure
- Reactor
- Press moulding
- Composite moulding ...

Features :

- Mineral oil ISO32 up to 250°C
Synthetic oil up to 350°C
- Manual filling
- Electrical supply 400VAC 3 Phases + E

Characteristics :

- 1 electrical heater with sensor
- 1 exchanger
- 1 pump
- 1 electrical cabinet with integrated central management (CMS/SGC ECO)
- Sensors for control and safety
- Painted frame equipped with castors

 - Centrifugal pump with magnetic seal
 - Pump with high flow rate
 - See all options on page 144

Vulcatherm® HOT / COOL 10803

Atmospheric closed loop

High performance - Safe for fluid
Accurate - Heavy duty

Heat, cool and control a closed fluid loop (Synthetic or mineral oil up to 180°C). Hot oil from process is cooled by an heat exchanger connected to water network.

Applications :

- Industrial process with high temperature and low pressure
- Reactor
- Press moulding
- Composite moulding...

Features :

- Mineral oil ISO32 up to 250°C
Synthetic oil up to 350°C
- Manual filling
- Electrical supply 400VAC 3 Phases + E

Characteristics :

- 1 electrical heater with sensor
- 1 exchanger
- 1 atmospheric expansion tank
- 1 pump
- 1 electrical cabinet with integrated central management (CMS/SGC ECO)
- Sensors for control and safety
- Painted frame equipped with castors

TEMPERATURE CONTROL UNITS VULCATHERM® OIL MEDIUM

ATMOSPHERIC : OIL 180°C, 250°C AND 300°C MAXI

Vulcatherm® HOT / COLD 10803

FLUID SUPERPOSITION

Atmospheric closed loop

High performance - Safe for fluid
Accurate - Heavy duty

Heat, cool and control a closed fluid loop (Synthetic or mineral oil up to 180°C). Hot oil from process is cooled by a heat exchanger connected to water network.

Applications :

- Industrial process with high temperature and low pressure
- Reactor
- Press moulding
- Composite moulding...

Features :

- Mineral oil ISO32 up to 250°C
Synthetic oil up to 350°C
- Manual filling
- Electrical supply 400VAC 3 Phases + E

Characteristics :

- 1 electrical heater with sensor
- 1 hot oil exchanger
- 1 atmospheric expansion tank
- 2 pumps
- 1 electrical cabinet with integrated central management (CMS/SGC V2)
- Sensors for control and safety
- Painted frame equipped with castors

Vulcatherm® HOT / AIR COOLED 10833

FLUID SUPERPOSITION

Atmospheric closed loop

High performance -
Wide temperature range

Heat, cool and control a closed oil loop (synthetic or mineral oil up to 180°C). Hot oil from process is cooled through an air exchanger and a fan. Fully available and designed for process without water network.

Applications :

- Elastomer moulding
- Polymer moulding
- Injection, extrusion
- Jacket heat
- Tracing ...

Features :

- Mineral oil ISO32
- Electrical supply 400VAC Tri + N + T

Characteristics :

- 1 electrical heater with temperature sensor
- 1 to 6 hot oil exchanger / cold air
- 1 to 3 helicoid fans
- 1 pump
- 1 atmospheric expansion tank
- 1 electrical cabinet with integrated central management (CMS/SGC V2)
- Sensors for control and safety
- Painted frame equipped with castors

TEMPERATURE CONTROL UNITS VULCATHERM® OIL MEDIUM

ATMOSPHERIC : OIL 180°C AND 250°C MAXI

Vulcatherm® HOT / COLD 10823 / 10843

Atmospheric
closed loop

High performance - Accurate
Wide temperature range - Reduced maintenance

Applications :

- Wide temperature range process
- Crystallizer
- Test benches
- Chemical reactor

Features :

- Loop with synthetic oil
- Manual filling
- Condenser cooled by water network
- Electrical supply 400VAC 3 Phases + E (+ Neutral with air condenser)

Characteristics :

- 1 electrical heater with sensor
- 1 hot oil exchanger / evaporator
- 1 condenser with water
- 1 pump
- 1 atmospheric expansion tank
- 1 electrical cabinet with integrated central management (**CMS/SGC V3**)
- Sensors for control and safety
- Painted frame equipped with castors

Customised solutions :

- **Wide temperature range available :**
from -55°C up to 180°C, from -30°C up to 260°C or from 0°C up to 300°C
- Power : 125 kW hot / 80 kW cold
- Pressurised expansion tank
- Air condenser (maxi 32°C) and centrifugal or helicoid fan
- See all options on page 144

CMS - CENTRAL MANAGEMENT SYSTEM

CMS's are smart controllers, able to manage elaborated control of process and feed back about measurements (temperature, pressure, flow rate...). Our 3 references are specially designed for specific requirements of thermoregulation.

SGC.v2

SGC.eco

SGC.v3 touch screen

In/out module

COMMUNICATION

- I-Pack analog in current 4...20 mA : set point (passive) + 1 measurement feedback (active).
- Pack digital ModBus RS 485 (RTU) Pack digital Profibus DP on gateway (internal electric box on SubD).
- Pack digital V485 (protocol ASCII Vulcanic)
- Pack numeric loop 0-20mA (Engel, Arburg...)
- Pack Ethernet (included Modbus IP except if other digital communication active)

EXTERNAL MEASUREMENT

- External temperature sensor PT100, TCJ, TCK, Analogic 4...20mA (passive).

SOFTWARE

- Cascade control by dual-loop (Master/Slave).
- Profil generator (16 steps).
- Programmable timer.
- Remote monitoring by GPRS network (GSM).
- Log (shortened max 2400 lines) on Ethernet (needs Pack Ethernet).

CMS UP-GRADE

- SGC.eco, SGC.v2 et SGC.v3 touch screen.

HYDRAULIC

- Increased cooling with fluid superposition.
- Automatic by-pass with 2-ways proportional valve.
- Flow rate control with 3-ways valve + flow meter.
- Piping in stainless steel...

MANUFACTURING

- Stainless steel housing.
- Removable retention tank.
- Replacement of castors by pads.
- Lifting rings.

ATEX TEMPERATURE CONTROL UNITS

Power available from 4 to 60 kW

- Water from 10°C to 140°C hot and hot/cold.
- Oil 10°C to 180°C hot/Cold.
- Oil 10°C to 300°C hot.
- Ambient atmospheric gas group IIA, or IIB or IIC.
- Operating temperature classification from T1 up to T6.
- Atex area 1 or area 2.
- Electrical cabinet and pumps Ex d protected or Ex e (possible other protection modes available).
- Electrical flow heater and heating elements available with protection modes Ex d or Ex e.

AIR CONDITIONING UNITS CHILLERS VULCAFROID® DEHUMIDIFIERS EDENAIR®

AIR CONDITIONING UNITS AND LIQUID CHILLERS

AIR-CONDITIONING UNITS FOR CABINETS

Cooling power : from 360 to 2500 W
(L35/L35 according to DIN 3168).

To be fixed either on the front door or side panel of a cabinet.

Factory pre-set to achieve an average cabinet temperature of 35°C max..

+ Customer's advantages

- One single cut-out for cabinets from 850 to 2500 W.
- **Powerless** condensation evaporating device.
- Electronic control with alarms and safety values (high pressure, cabinet opened, cabinet temperature, fan and compressor's thermal breakers).
- Ventilated hermetic compressor.
- Standard spare parts for all models.

SELF-CONTAINED INDUSTRIAL CHILLERS VULCAFROID®

Chillers designed to cool down industrial process through a refrigerated water circulating in a closed loop (water with 5 % added glycol or ISO VG2 heat-transfer oil). Standard cooling power available from 1,6 to 30 kW.

On request : other powers and medium temperatures.

LIQUID CHILLER STL 200/250

These chillers are a self-contained cooling system for liquids, mobile and autonomus.

Applications :

- Hot sources Pelletier
- Lasers
- Optical systems

Features :

- Rubber feet.
- Handle for transport.
- Electronic PID controller.
- Adjustable high set point for safety temperature.
- Special and non corrosion treatment on heat exchanger.
- Internal liquid tank.
- Front mounted level control.
- Centrifugal pump with magnetic seal.

- Inlet and outlet for pipes Ø 8x10mm.
- Hermetic cooling compressor.
- Air condensing unit.

Options :

- Flow switch 0,4 l/min or 1 l/min.
- Flow rate control with low flow safety contact.
- Water condenser.
- Electrical heating.
- Painted box with castors.

Characteristics	TYPE	
	STL 250	STL 200
Hermetic cooling compressor	1/6 CV - 120 W 1/6 HP - 120 W	1/5 CV - 150 W 1/5 HP - 150 W
Cooling power (liquid 20°C Air 25°C)	180 W	230 W
Air flow	120 m³/h **	150 m³/h **
Supply voltage (50Hz)	230 V - 1ph	230 V - 1ph

Water flow output (20°C - 0,25 bar)	6 l/min	6 l/min
Reserve capacity	1,5 liters	1,5 liters
Dimensions : P/L/H (mm)	370 x 290 x 460	370 x 290 x 460
Weight	23 Kg	24 Kg
Working capabilities	5°C up to 35°C - ambient 15°C up to 35°C	

DEHUMIDIFIER EDENAIR® DP 1200, 3500, 5000 AND 10000

Applications :

- Warehouses
- Swimming pools
- Cellars
- Underground shelters
- Laboratories
- Drying processes : (buildings, wood, food and beverage, clothes...)
- Archives
- Green houses
- Gymnasium
- Covered stadium

Features :

- Easily changeable air filter.
- Automatic defrosting.
- Two functions : ventilation only / ventilation and dehumidification.
- Adjustable controller from 0 up to 20°C, cut out the dehumidifier at low temperature.
- Cooper lined cold exchanger with protection against corrosion

Options :

- Remote control with moisture controller. and 3 position cut out controller.
- Transformer incorporated (remote control 24 V).
- Electrical heating.
- Hot water heating exchanger.

DEHUMIDIFIERS EDENAIR® VDM 750, 1200, 3500, 5000 AND 10000

Applications :

- Warehouses
- Swimming pools
- Cellars
- Underground shelters
- Laboratories
- Drying processes : (buildings, wood, food and beverage, clothes...)
- Archives
- Green houses
- Gymnasium
- Covered stadium

Features :

- Casing adaptor for air duct connection.
- Designed in two parts for easy maintenance and handling during transport.
- Automatic defrosting allows temperature up to 0°C for VMD 750/1200 and 5°C for VMD 3500/5000 and 10000.
- Adjustable thermostat from -5°C up to 15°C in air inlet to switch off dehumidifier at low temperature.
- Cooper lined cold exchanger with protection against corrosion.

Options :

- Remote controller with hygrostat and 3 positions switch : ventilation on, ventilation+ dehumidification and off.
- Internal transformer 24 V.
- Electrical heating with temperature controller.
- High pressure available reinforced at 10 mmCE for VMD 750/1200
- High pressure available reinforced at 20 mmCE for VMD 3500/5000/10000.
- Hot water heat exchanger without controller.
- Water condenser.

DEHUMIDIFIERS EDENAIR® T 750 AND 1200

Applications :

- Cellars
- Libraries
- Archives
- Photocopy centers
- Residences
- Restaurants
- Clothes dryers
- Boats
- Museums
- Green houses

Features :

- Wheels.
- Easy access Air filter - Efficiency 50%.
- Hygrostat control - Accuracy +/- 7%
- Hot gas defrosting with automatic and thermostatic timer.
- Level control contact safety.
- High pressure contact safety.
- Hydraulic adapter for water connection on the customer network.
- May be built-in (on specific request).
- Cooper lined cold exchanger with protection against corrosion.

Options :

- Pump for condensed water.
- Centrifugal fan for air duct network 50 Pa (5 mm CE).
- Water exchanger.
- Electrical heater.
