Precise measurement

– Configurable system control

MINIMISE THE RISK OF COSTLY CONTAMINATIONS!

■ New intuitive operating system

Gives guidance to the operator as well as questioning and preventing an incorrect selection. The system also records and prints all delivery data such as Grade selection & pre-set, Volume, compartment selection sequence, line change etc...

■ Real time Load inventory

View on screen and print at any time, the product grade and volume contained in each compartment.

■ Anti-cross over

Prevents accidental opening of a compartment containing a grade different to that selected for delivery.

■ Remote control with digital litre counter

Allows the operator to control and monitor deliveries from the end of the hose.

■ NEW ACTI-Clear feature

Ensures that the delivery manifold and pre-meter pipe line is left empty after each delivery thus eliminating manifold 'cocktails' and reducing line change volume.

■ Predetermined line change volume

A dedicated 'LINE CHANGE' menu function ensures accurate and consistent line change volume every time.

Line change function ensures accurate and consistent line change volume every time.

Programmable inventory monitors grade and compartment volumes whilst providing protection against cross overs and costly contaminations.

New digital remote

Intuitive operating system gives guidance to the operator and warns of an incorrect compartment/grade selection.
