

Product Support

Vehicle or equipment down time costs you money and hence you need to be assured that if you encounter a problem it will be sorted out as quickly as possible.

Alpeco's commitment to after sales service and support is unrivalled in the industry and our team of service engineers can be called upon to carry out infield service and repair work anywhere in the UK.

- Meter repairs, calibration and sealing
- Contract maintenance
- Installation and commissioning of TE550 retro fit kits
- Driver training
- Service and maintenance training courses
- Nationwide support

MF400 MF800 MF1100

Electronic truck metering solutions

- MF 400/800/1100 Multifunctional systems
- TE550 Electronic register retro fit kits

MF400 MF800 MF1100

Multifunctional Systems

The NEW MultiFunctional range of truck meter systems combine the ultimate in terms of accurate fuel measurement together with total system control and flexible build options.

- LC meter provides unequalled accuracy (0.03% over entire flow range) and long term reliability with minimal re calibration requirements.
- Compact 2" & 3" meter chambers can be remotely mounted without the need for meter cabinet, thereby reducing weight, simplifying pipe work and freeing up chassis space.
- Highly efficient LC SOUND, Ultrasonic gas detector bolts directly to the meter, enabling the meter to be installed legally with any bottom loading manifold or top load tank arrangement.
- Temperature compensation software incorporated as standard, probe mounting bolts directly to the meter and can be supplied as an option.

- Electronic flow sensing, ensures optimum flow and pressure control, with no valve to service or adjust.
- Checkmate control module combines TE550 electronic register along with controls for Footvalves, Product return, Reel/Bulk selection and Engine Stop/Start. Providing a compact, easy to use, work station for the entire delivery system.
- MID approved.

Options include:

- 400, 800 & 1100 lpm metered delivery systems.
- Hose reel and bulk hose delivery options
- Metered uplift
- iMeter tracking and real time delivery reports
- Temperature compensation
- Additive injection
- Product return
- Dry line delivery
- Remote control

TE550 Retro Fit Kits

Upgrade your mechanical meter system with the TE550 retrofit kit and realise the benefits of electronic metering.

- Eliminate kerosene losses traditionally associated with mechanical registers when calibrated for use on multiple products. TE550 can be calibrated for up to 7 products.
- Install with temperature compensation and reduce stock losses due to temperature variations.

- Improve audit trails through detailed delivery tickets Giving time, date, grade and volume delivered, TE550 also records up to 1500 deliveries in its memory log.
- Improved accuracy, TE550 can be calibrated to strike for all products.
- Remote control – TE550 can be supplied complete with remote control enabling the driver to start and stop the delivery whilst standing at the end of the delivery hose.
- TE550 can be interfaced with in cab computer systems or iMeter.
- Stand alone or Checkmate variants available.

Simple to install each retro fit kit incorporates everything required to undertake the conversion:

- TE550 register, CPU and printer
- POD Pulse output device
- Solenoid box
- Voltage stabiliser and wiring loom
- New serial plate
