

## **Zymax International Ltd RoHS, WEEE and the Environment.**

As the majority of our product range are surge protection devices, they do not require electricity to provide their primary function. They therefore do not currently fall under the banner of Electrical & Electronic Equipment (EEE). See RoHS 2002/95/EC Article 3 (paragraph a) and WEEE 2002/96/EC Article 3 (paragraph a).

Zymax take the responsibility of protecting the environment very seriously and although the majority of our products are not EEE as defined under the current RoHS directive, we have implemented many internal procedures to ensure that we do all we can to protect the environment and are also prepared for any future change in the directive.

### **Product Manufacture:**

Lead (Pb) free solder is used during product assembly.

All parts and supplies are sourced to meet RoHS compliance.

### **Product Packaging:**

Our main primary product packaging (cartons) are manufactured to use no adhesives and are 100% recyclable and carry the RESY recycling mark.

During shipping (transit) we use where-ever possible biodegradable packaging material.

To cover any future products and/or changes to the legislation and also to show our commitment we are registering with a WEEE producer compliance scheme as from January 2010 (WEEE registration number WEE/AC1635XU).
