NEW APPOINTMENTS STRENGTHEN LORIEN'S BREWING TEAM

with pic

As it works to consolidate its position in the UK brewing sector and to expand internationally, Midlands-based engineering design and project management company, Lorien Engineering Solutions has announced two key new appointments.

Andrew Mieleniewski joins as brewing development consultant to help strengthen Lorien's expertise within the sector. He will be responsible for building on the firm's existing customer base and expanding its business in international territories.

Andrew joins Lorien following 17 years working for Coors, latterly as engineering governance manager. He will head a team of three which will focus on Lorien's expertise within the industry.

He said: "I'm looking forward to the challenge of consolidating Lorien's expertise and being able to offer an enhanced service to the brewing sector. The company has an excellent reputation in the sector and we will continue to build on its future."

Tim Machin has been recruited by Lorien as a brewing consultant. A qualified brewer, Tim has considerable experience of capital project design and management gained over 30 years within the UK brewing industry. He also joins Lorien from Coors where he worked as principal project manager.

Lorien brewing director Steve Slater welcomes the appointments. He said:
“We started out 22 years ago as an engineering consultancy focused mainly on the drinks and brewing industry. Although we have since moved into food, pharmaceutical and renewable waste & energy, it seems appropriate that we should focus our international ambitions on the brewing market, as it has been the foundation to the business.

“We have enjoyed a 15-year working relationship with Andrew and Tim’s previous employer Coors, and we know that their skills and expertise in the brewing sector will help Lorien’s growth, particularly internationally.”

With a portfolio of clients including InBev, Carlsberg, Scottish & Newcastle and Efes Breweries International, as well as working on behalf of the European Bank of Reconstruction & Development, Lorien is already expanding its work into China, Russia and the emerging countries of Eastern Europe.

Lorien Engineering Solutions is a multi-disciplinary engineering design and project management organization. The company has a staff of 70 specialists who design and deliver manufacturing capital projects and performance improvement consultancy in the brewing, drinks, food, pharmaceutical and renewable waste and energy industries.
