EDITORIAL

RENNER stands for stability

We are currently witnessing how crises are becoming the new normal in many areas. And yet – or precisely because of this – we have some good news for you: When it comes to professional labelling technology, RENNER is your rock-solid partner.

This support starts with consulting, which extends far beyond the delivery date and, in addition to reliable technology with brand-name components, always keeps an eye on cost-effectiveness. Our design department and in-house production at the company site in Germany creates continuity, complemented by an optimal service that is available internationally.

It is easy to explain the goal behind this: 100-percent customer satisfaction. This has been driving us for two generations. In this issue, we want to show that our self-developed RENNER S machine series meets this requirement in every performance class: from the “small” RENNER CRAFTER for small breweries, wine press houses and contract bottlers to the highly flexible modular machine.

Take us at our word and we will provide stability and future security when it comes to labelling. We look forward to meeting your next challenge to your complete satisfaction!

I hope you enjoy reading

A handwritten signature in blue ink that reads 'Steffen Renner'.

Steffen Renner

The Krämer wine press house, now in its third generation, combines tradition with modernity.

With more than 100 hectares of yield area, the Schloss Fels winery is one of the largest in Austria.

KELTEREI KRÄMER

Precision for glass & cans

The Krämer wine press company awards the labelling part of its new production line to **RENNER**. Among other things, the innovative cider brand **BEMBEL WITH CARE** will run on the combined machine that has been ordered.

With this cult brand, which was added to the product range in 2008, the family-owned company from the Odenwald region of Germany is tapping into a young, nationwide target group and successfully asserting itself on the market. After being precisely aligned, the stylishly printed cans from the new **RENNER S1200 Servo Combi** receive a self-adhesive label with individual country specifications. The classic method is to label all bottles of juices, fruit wines and mixed drinks using wet glue.

WEINGUT SCHLOSS FELS

Non-stop quality

The Schloss Fels winery has already chosen **RENNER** for the third time, this time with a highly flexible modular machine.

The production plant of SPAR Österreichische Warenhandels-AG is one of the largest wineries in Austria. As part of a line renewal, the **RENNER S1800** module replaces one of the previous labelling machines. Why did the company, which produces and bottles wine and spirits, bet on Renner yet again? In addition to the labelling itself, the excellent service and reliable spare parts supply have also proven their worth over the years.

The machine has three docking stations. Various modules can be connected as required. In addition to two wet glue modules, the scope of delivery also includes two self-adhesive modules for non-stop operation – one with **AutoSplicer** and carrier tape re-winder, the other with two dispensers in tandem mode.

W.U.H. FERNHOLZ

Cup labelling

Packaging specialist W.u.H. Fernholz plays it safe with RENNER S CUP LABELLING for cup labelling.

Modern packaging solutions and films made of thermoplastics – that is Fernholz’s bread and butter. In the cup sector, as well as printing and paper wrapping, the company also provides the option of labelling.

The RENNER S1200 Servo PSL they have ordered is designed for a range of formats and, among other things, applies L-labels to the front and bottom in non-stop operation. Reliable cup handling is guaranteed thanks to partner M&A Automation. The filigree plastic containers are thus safely separated, labelled and re-stacked.

Want to know more about the selected solution? 

SMARTPETPRO

Animal welfare in a can

Canned food producer SmartPetPro integrates a RENNER S Pre-Cut with closed hotmelt system into a newly built high-tech plant.

The start-up SmartPetPro has set itself the task of developing and producing sustainable premium canned food for dogs and cats. The offer is aimed exclusively at private label customers. The company selected a RENNER S720 Pre-Cut for the new highly automated and sustainable filling line in Dessau, Germany. The hotmelt system not only works efficiently, safely and reliably, but is also easy to operate. Thanks to economical wrap-around labelling with start and end gluing, pre-cut labels are transferred from the label magazine to different containers quickly, precisely, and fully automatically.

1. Precise handling and labelling of plastic cups
2. Premium pet food with wrap-around label
3. Headquarters against an imposing backdrop: Landena KG in Stainach, Austria
4. For generations, Landena has produced food for brands, including Mediterranean sauces and soups in jars or canned sausage snacks, preserves and spreads.

4

LANDENA

Flexible production in cans and jars

Landena, an internationally active manufacturer of finished products, chooses RENNER as a reliable partner for hotmelt and self-adhesive labelling.

Preserves, frozen products and sausage snacks – three areas in which Landena has stood for enjoyment and quality for over 50 years. The company, which is located between the Austrian cities of Salzburg and Graz, also sets it itself apart with highly flexible manufacturing. The ability to adapt quickly to new products is also key for the new labelling solution. The RENNER S1200 Servo Combi processes a total of 19 different formats: Cans receive paper wrap-around labels using hot glue, glass bottles are partially labelled with hot glue or self-adhesive.

In addition to new premium-quality design options such as lid and closure labels, Landena placed great emphasis on reliable technology. Alongside decades of experience and high-quality mechanical engineering, support during commissioning – until the customer was absolutely satisfied – also spoke in favor of RENNER as a partner. “RENNER put together an impressive complete package for us,” explains Gerhard Schachner, Technical Manager at Landena. “We are confident that we have made the right decision for decades to come with our new partner.”

Want to know more about the selected solution?

1

1. Company owner Johannes Ehrnsperger continues a brewing tradition of almost 400 years and is consistently focused on sustainability.

2. Neumarkter Lammsbräu non-alcoholic in the characteristic 0.33 l gourmet bottle.

3. Company headquarters of the traditional organic brewery in Neumarkt near Nuremberg.

4. Good for the environment and for resources: The high-quality organic products are to be labelled even more sustainably in the future.

NEUMARKTER LAMMSBRÄU

Breaking new ground together

Organic pioneer Neumarkter Lammsbräu also wants to make labelling sustainable, and decides on RENNER as a partner for new and existing tasks.

Sophisticated design: Organic lemonade brand "now" with wrap-around label on tapered bottle neck.

There are not many breweries that have been producing sustainable organic beverages for several generations. That's why the entire industry is especially interested in what Neumarkter Lammsbräu Gebr. Ehrnsperger KG is planning next. Not only in terms of beer, soft drinks and mineral water, but also in terms of design.

SOPHISTICATED DESIGNS ...

"The packaging must reflect the high standards we set for our ingredients and products," says Johannes Ehrnsperger, Managing Director of the family business that is nearly 400 years old. Even if this is not always easy to realize on a technical level: The organic pioneer does not shy away from challenges. This is demonstrated, among other things, by the current glass

formats used for BioKristall organic mineral water and "now" organic lemonades.

... TECHNICALLY FLAWLESS

The opportunity to expand the technical possibilities was provided by the recent construction of a second filling line. Neumarkter Lammsbräu picked the best supplier for each discipline in the new system. "With RENNER, we are banking on an experienced partner who can not only implement unusual designs, but also break new ground," says Johannes Ehrnsperger. This willingness is important as we aim to use even more sustainable materials in the future, from PVC-free crown corks to labels made from FSC-certified or recycled paper and environmentally friendly inks." When it comes to naturally degradable glue, the company is still in the early stages, but the experience

Want to know more about the selected solution?

2 3

4

to date with RENNER and the glue supplier fills the Managing Director with confidence.

THE SUPPORT HAS TO BE RIGHT

Johannes Ehrnsperger knows that the goals he has set can only be achieved with a functioning foursome of paper and glue manufacturers, printers and labelers. At RENNER, the family brewery found not only future-oriented technology but also the necessary consulting expertise and dedicated support with fast response times.

THE “NEW” ONE HAD TO BE ABLE TO DO EVERYTHING

This experience is also shared by the former Head of Production, Karl-Heinz Maderer, who asked another brewery about their experience with RENNER in advance. “Our requirements were quite complex, as the new machine also provides us with a buffer for the

PERFECT FIT ON ANY SHAPE

The fact that RENNER can also solve tricky tasks has been proven by the recently introduced formats and labels, which Johannes Ehrnsperger says are being processed perfectly. Thanks to targeted advice, even

“ High-quality products have to be perfect. Optimal labelling directly impacts sales and customer satisfaction.

first filling line. Consequently, the RENNER S960 also had to be able to map our previous product range. The first impression of a simultaneously robust and flexible machine that delivers optimum results has now been confirmed.”

tapered neck areas are precisely labelled all the way around. “Switching to RENNER was definitely a step in the right direction,” confirms Johannes Ehrnsperger. “Both in terms of expanding our capacity and with a view to even more sustainable labelling.”

THE USER

- > Pioneering: 1982 – first organic beer
- > Wide range of sustainable organic beverages
- > 2021 – CSR Award from the Federal Government

THE CHALLENGE

- > Flexible labelling solution for a new filling line
- > Map new and old products
- > Aiming for even more sustainable labelling

THE SOLUTION

- > RENNER S960 wet glue
- > Compact motion design, high productivity
- > Technical advice on design and material

BEER

BRASSERIE DU BOCQ

One solution for many features

The Belgian brewery made a conscious decision not to go with a full-service provider and is doing very well with it.

THE USER

- > One of the largest independent breweries in the Wallonia part of Belgium
- > Wide range of own and third-party brands
- > Annual production: approx. 100,000 hectoliters

THE CHALLENGE

- > Flexible & future-proof labelling solution
- > Diverse formats and features
- > Frequent changeovers

THE SOLUTION

- > RENNER S1800 Servo Combi: 2 x wet glue,
- > 2 x self-adhesive with non-stop function
- > Optical bottle alignment
- > Label inspection

Steinie, Vichy, Apo, Champagne and Belgian beer bottles are just some of the formats that Brasserie du Bocq, founded in 1858, uses in various sizes for its own and third-party brands. The technical requirements for the newly built production line were suitably high.

NEW GREEN-FIELD SITE

The up-and-coming brewery had outgrown its former site in the small village of Purnode. Anyone who opens the doors of the new production and logistics hall will see robust and flexible technology at its best. The Wallonian brasserie chose only leading manufacturers for the individual parts of the line. It did not take long to decide upon RENNER, recalls Managing Director Dimitri Delcourt. “No other vendor understands what

we need so well and was able to provide us with such a flexible and economical solution.”

REPRODUCIBLE SETTINGS

It is not uncommon for operators to switch the RENNER S1800 Servo Combi to a new format twice a day – or even more. This must be done quickly. That’s why the format parts can be changed with quick-release fasteners without the need for separate tools. With the help of the cross slide, the height-adjustable units can also be quickly switched between operation and service without losing their settings. In addition to the two wet gluing units, two self-adhesive dispensers are integrated in non-stop tandem operation, as well as a camera system for precise alignment of printed bottles. “This opens up many design options for us, such as for export or for promotional stickers,” says a delighted Dimitri Delcourt.

“RENNER is a true expert when it comes to labelling machines and its collaboration with the interface manufacturers could not have gone more smoothly. We are very happy with our choice.”

Want to know more about the selected solution?

1. Main building of the brewery in the Walloon village of Purnode.
2. The RENNER S1800 Combi in the newly built production hall.
3. Magazine with paper labels for “Blanche de Namur” wheat beer, which has won several international awards.

SPECIAL

RENNER CRAFTER

Maximum quality, minimum space.

RENNER Crafter is THE labelling machine for small outputs. Precise, robust, intuitive, easy to clean and quick to change over. A compact, efficient, and flexible solution for small breweries, wine press houses, and contract bottlers. What our early adopters said:

“ We were looking for a new product design with natural paper and back label and we came to RENNER based on a recommendation. Inserting their machine into our small production line was precision work. In addition to its stable operation, we are very happy with the direct communication and competent advice.

Benjamin Peters, Owner
Satower Mosterei, Satow

“ We produce around 2,700 hectoliters of our only beer, Urtrunk, every year. With the RENNER Crafter, we have found a replacement for our old machine that is compact, flexible and stable in value. We started with front labelling, and are very satisfied. If necessary, we can retrofit a back unit.

Karl-Heinz Schroll, Owner
Brauerei Schroll, Reckendorf

“ As a result of the pandemic, we became more focused on retail, and thus required a greater number of bottles. The RENNER Crafter ensures the new filling line makes a clean and stable impression. In addition to the technology, we appreciate the high level of personal support and flexibility.

Rainer Schinkels, Owner and Managing Director
Schinkels Brauhaus, Witzzenhausen

MACHINE PROFILE

The RENNER Crafter has a cam-controlled bottle table with a diameter of 480 mm, a torsion-resistant, height-adjustable base frame, and a swiveling touch panel for convenient operation. The control cabinet is mounted in a dry position above the infeed and outfeed, which also saves space, and the machine is easily accessible overall. Other highlights:

VERSATILE: for glass, plastic or metal, round or shaped containers

HIGH PRECISION: Rotary design, exact container placement, label transfer with millimeter precision, reproducible settings

ECONOMICAL: Minimal glue consumption due to low-wear glue roller and rubber pallets, infinitely variable with fine adjustment and reference display

QUICK CHANGEOVER: Tool-free container- & label change, reproducible unit settings with cross slide for service- or working position

STABLE PROCESSES: Bottle breakage detection, electric-pneumatic glue-bar adjustment, output regulation (jam switch in infeed and outfeed)

FUTURE-PROOF: Modular design, branded components, minimal wear, current safety standards

BEER

1

1. Brewing-art in the steinie bottle: The “Perle” and “Tettlinger” aromatic hops give the traditionally brewed pils a fine tart character.

2. Operations Manager Marc Zinkler: “When it comes to quality, we don’t compromise. Beer connoisseurs notice this from the very first sip.”

3. “Together. With Fiege”: Hugo, Hubertus, Carla, and Jürgen Fiege (from left to right) are proud to be part of the Ruhr region’s cultural identity.

MORITZ FIEGE

Brewing craft with a swing-top

The MORITZ FIEGE family brewery in Bochum not only selects its raw materials with the utmost care. Their new labelling solution also has to meet the highest standards.

Marc Zinkler can’t be fooled. Anyone who has been bottling his beers almost exclusively in swing-top bottles for 20 years can tell immediately whether he is looking at a modified standard machine or one that has been designed and built specifically for swing-top bottles.

A few months ago, the 50-year-old Operations Manager at MORITZ FIEGE put a new labelling machine from RENNER into operation. And it has everything that the slow brewers and swing-top bottle lovers from Bochum need: from bottle guides and stable units with long brush-on distances to servo-motor-driven coarse and fine alignment, including error messages for swing-top closures that are slanted or open.

CHANGEOVER TO SERVO TECHNOLOGY

The sixth-generation family brewery bottles 75 percent of its specialty beers in Lochmund bottles. The other quarter is marketed in the steinie format. But it was precisely the handling of the smaller bottles that led to repeated problems with the previous machine from another manufacturer,

Want to know more about the selected solution?

2 3

Engineered, Made in Germany: The RENNER S1200 Servo wet glue machine for Moritz Fiege is specially designed for swing-top bottles.

which was around 18 years old, recalls Marc Zinkler. In addition, the purely mechanical machine showed high wear and increasingly produced a labelling image of fluctuating to insufficient quality.

A NO-NONSENSE “SWING-TOP MACHINE”

In contrast, the performance of the new RENNER S1200 Servo almost makes the Fiege team forget their difficult past. Neck, belly, and seal labels are applied to each of the two formats with a high level of precision and reproducibility. And all this at an output of 30,000 bph. The servo-controlled container plates operate wear-free and are sealed against the intrusion of liquids. Another advantage: The larger bottle table with a diameter of 1,200 mm reduces angular speeds, which in turn pays off when it comes to process stability. Compared to the past, MORITZ FIEGE benefits from a consistent throughput with

increased performance and quality. In addition, the machine is easy to operate, convert and clean. This saves valuable time in the day-to-day filling process. “While operating the old machine required very specific expertise, the RENNER machine is transparent and has good self-monitoring.”

OPTIMUM SERVICE

Marc Zinkler describes the cooperation with RENNER as involved and solution-oriented. “You can sense that RENNER is genuinely interested in its customers and their challenges. The team is experienced, knowledgeable and quickly addresses any concerns.”

Ever since the machine was commissioned by an experienced and well-drilled team, it has been running completely smoothly, says Marc Zinkler happily.

“ When it comes to swing-top labelling, there’s no getting around RENNER. I can only recommend working with them.

THE USER

- > Sixth-generation family brewery
- > Swing-top filler since 2002
- > Slow Brewing Quality Seal

THE CHALLENGE

- > High-performance solution for swing-top bottles
- > Increased productivity and quality
- > High process stability

THE SOLUTION

- > RENNER S1200 servo wet glue
- > Stable, reproducible label image
- > Inspection of fill level and label fit

WATER

1 2

3

1. "Drink Brohler. Feel better" – Quality mineral water from the Volcanic Eifel, one of the most pristine natural landscapes in Germany. 2. All-round satisfaction: Managing Director Martin Schilling with accurately labelled cooperative bottle. 3. Ready for use: The paper labels of the declared vegan apple spritzer with 55% fruit content, lots of vitamin C and the harmonious taste of Brohler mineral water.

BROHLER MINERALBRUNNEN

A safe changeover

Brohler Mineralbrunnen combines the relaunch of its products with a sustainable technological leap.

Many mineral water companies are faced with the task of asserting themselves with fresh ideas against global players, water carbonators and other trends. The fifth-generation family business takes this in its stride thanks to a clear focus on regionality, quality and sustainability.

SUSTAINABILITY WITH A FRESH DESIGN

Founded in 1909, the Mineralbrunnen mineral water company, which is located on the edge of the Volcanic Eifel mountain range, relies on 100-percent reusable packaging and is climate-neutral throughout the entire value chain – from the spring to the return of empties. The recently launched N1 and N2 cooperative formats with wrap-around label form a visual highlight. However, the relaunch required a new labelling machine which met current safety standards, and which also had to be installed in a cramped filling line.

LATEST TECHNOLOGY, MAXIMUM SAFETY

It was under this premise that Martin Schilling, the Technical Manager and now Managing Director of the Engineering and Production department, approached RENNER. Here, in addition to a compact machine with approved safety standards, he also found consulting support for the technical implementation of wrap-around labels.

The modular RENNER Motion design meant it was easy to disassemble the rotary machine into individual assemblies and integrate it into the line. "Our trust paid off," Martin Schilling sums up with satisfaction. "The new labels look great, require only a third of the previous amount of glue and are applied with high precision."

“ The new machine is easy to operate, changeover and clean. This saves us a lot of time. ”

THE USER

- > One independent mineral spring, five generations.
- > 100% reusable, climate-neutral

THE CHALLENGE

- > Replacement that meets current safety standards
- > Introduction of new formats and wrap-around labels
- > Integration in a confined space

THE SOLUTION

- > RENNER S1200 wet glue
- > Compact motion design
- > Consultation on technical implementation

Want to know more about the selected solution?

ROTKÄPPCHEN-MUMM

Perfectly equipped bottles, options for the future

RENNER scores points with stable processes and plenty of design freedom in their collaboration with Germany's market leader in sparkling wine, branded wine and spirits.

The roots of Rotkäppchen-Mumm go back hundreds of years in some cases, with the spirits brands dating back as far as 1507. The famous "red champagne cap" was created in 1856 in Freyburg, the "capital" of the traditional wine-growing region of Saale-Unstrut, and gave the brand its name from 1894 onwards.

POWERFUL COMBINED SOLUTION ...

A multi-function line at the company's headquarters in Freyburg is used to label 1.5-liter magnum bottles of the Rotkäppchen, Mumm, and MM brands, among others. At the beginning of 2021, the sparkling wine producer replaced the existing machine with a state-of-the-art solution for wet glue and self-adhesive labels from RENNER. "In addition to the versatility, we were convinced by the good price-performance ratio and the

“ The combined machine precisely fulfilled all the requirements. It convinces with a high degree of delivery, stable results and a wide range of design options.

fast on-site support," reports Jan Wiemann, Head of Maintenance at the filling plant in Freyburg.

SUPPLIED AS A COMPLETE PACKAGE

The new RENNER S1200 Combi Servo PSL features, among other things, two wet gluing units, label inspection and a camera system for servo-motor alignment based on control marks. Two self-adhesive dispensers open up new design options for the company when it comes to their 0.75 l bottles and various special features. The new machine was supplied from a single source and came with a bottle dryer included. According to Jan Wiemann, installation and commissioning went smoothly.

THE USER

- > Germany's leading supplier of sparkling wine, wine and spirits
- > Founded in 1856 in Freyburg (Unstrut)
- > Total revenue: 1.2 billion euros (2021)

THE CHALLENGE

- > Flexible labelling solution for multifunction line
- > High quality and process stability
- > Versatile labelling, intuitive operation

THE SOLUTION

- > RENNER S1200 Servo Combi: 2 x wet glue, 2 x self-adhesive
- > Optical bottle alignment
- > Label inspection

RENNER S600

What our customers say

Breweries, wine presses, and contract bottlers need machines that retain their value and deliver sustainably good results. In operation, it comes down to the practical things, such as ease of use, cleaning and changeover. And of course, the support and spare parts supply must be right. We asked five of our customers why they chose RENNER and how our small, powerful rotary machine is performing.

The RENNER S600 wet glue with 600-millimeter bottle table applies a wide variety of paper labels, including closure seals, in a precise, economical and reliable fashion. The modular rotary design is easily accessible, integrates into the line to save space and opens up various aggregate, alignment and control options.

Hauf Brewery, Dinkelsbühl

PRODUCTS:	Beer, beer brandies and beer liqueurs
EQUIPMENT:	Front aggregate
IN OPERATION SINCE:	2022

The family-owned brewery, founded in 1901, was looking for a robust machine for the new plant “without the frills”, but with consistent quality and a future-proof design. In addition, the new labeler had to be user-friendly, easy to clean and quick to change over.

“ The Renner S600 labels our 0.5 l Euro and 0.33 l Vichy bottles in a clean, reliable fashion.

Florian Hauf, Managing Director

Felsenbräu Thalmanfeld

PRODUCTS:	Beer and soft drinks
EQUIPMENT:	Two aggregates
IN OPERATION SINCE:	2020

The third-generation family brewery needed a space-saving and high-performance labeling machine. The “new one” applies belly, chest and back labels to various formats. A variable date imprint on the front and back is also integrated.

“ We are very satisfied. The technology runs smoothly. Our contact persons are easy to reach, wear parts are available quickly.

Walter Gloßner, Master Brewer and Managing Director

Menschel-Limo, Hainewalde

PRODUCTS:	Lemonades
EQUIPMENT:	Two aggregates
COMMISSIONING:	2022

Cucumber lemonade, chocolate fizz or blue stone energy? For five generations, the Menschel name has stood for innovative soft drinks in the region. A RENNER S600 will be installed in the newly constructed filling line for processing 8,000 bph on the recommendation of the general contractor.

“ Our machine was delivered on time. The cooperation with RENNER is uncomplicated and solution-oriented.

Stefan Kubitz, Managing Director

Beil Fruchtsaft, Neckarsulm

PRODUCTS:	Fruit juices
EQUIPMENT:	Two aggregates
COMMISSIONING:	2022

For the fruit juice winery with beverage trade, wine house, and distillery, the experience with RENNER as an alternative service provider for KRONES labelling machines tipped the scales. “Our contacts are easy to reach, and the results are convincing,” says Joachim Beil, who is the fourth generation to run the contract bottling business.

“ The competent service for our Krones machine indicated the high quality of the RENNER S600. This assessment has been fully confirmed.

Joachim Beil, Managing Director

Ribes Fruit & Juice, St. Stefan ob Stainz

PRODUCTS:	Fruit juices
EQUIPMENT:	Special equipment for L-labels
COMMISSIONING:	2022

With a valuable design including an L-label to secure the closure, Ribes stands out from the competition. RENNER supported this project with the appropriate special equipment, a minimum number of format parts and useful suggestions for optimum operation.

“ The technology and operation of the machine demonstrate the extremely high quality standards at RENNER. Our contacts are proactive and professional. All of this benefits us as customers.

Franz Schriebl, Managing Director

Plassenburg Kelterei, Bad Berneck

PRODUCTS:	Fruit juices, nectars, fruit wines & soft drinks
EQUIPMENT:	Two aggregates and label inspection
COMMISSIONING:	2022

To mark the occasion of a newly built production hall, the Franconian cooperative winepress company replaced not only the packer and conveyor belts, but also the 15-year-old labeler. Stable aggregates and an exact label fit were particularly important. Easily reproducible results and short make-ready times are ensured, among other things, by the compound slide and the tool-free change of format parts.

“ The RENNER S produces a high-quality and stable bottle image. This puts us in an excellent position for the future.

Markus Wolfrum, Managing Director

GLEN TURNER DISTILLERY

A legend invests in new technology

More output, more precision, more capacity. The Scottish Glen Turner Distillery plays it safe with RENNER.

Rounded taste with floral bouquet and unique sweetness: In Strawlaw, Scotland, they have been bottling this legendary single malt since 2004: Glen Turner.

WHY NOT ASK RENNER?

In order to be able to label scotch whisky at high quality in the desired quantity, Ian McLaren needed an economical replacement for the existing labelling solution. The general manager of Glen Turner Distillery promptly recalled a previous collaboration with RENNER. He received detailed advice and got exactly what he wanted: A highly efficient machine, delivered on time and according to specification. "Everything was exactly as promised," reports Ian McLaren, "from the initial design drawing through delivery and implementation to documentation and training."

PRECISE WORK, MORE THROUGHPUT

The compact, easily accessible S1200 Servo PSL applies around ten different self-adhesive labels to individual bottles from the Glen Turner and Glen Moray brands. Servo-controlled container plates and a camera system ensure precise alignment. "We are now achieving 15 percent more output, but we still have room for improvement," reveals Ian McLaren. "RENNER's complete package was the best all-round solution for Glen Turner."

” The RENNER option turned out to be a good investment, and I'm happy to recommend it to the group as well.
