

CM-1 CAPSULE COUNTING MACHINE *by Multigel*

EFFICIENT and DEPENDABLE

The CM-1 Capsule Counter is outstanding for its user-friendliness and almost non-existent maintenance. It is a compact and lightweight device. The adjustable support holder allows the capsule counters outlet to be adjusted for a variety of receiving containers. The 10 channel capsule drop unit, by means of a simple trigger action, releases and guides 10 capsules into the chute and directly into the bottle, vial or designated collection container. Releasing the trigger reloads the machine and the process is repeated. Changing capsule sizes is fast and easy. Releasing two knobs allows for the changing of the 10 channel trigger unit shown below.
