

BHP HDS Coil Cradle Straightener Full Machine Refurbishment

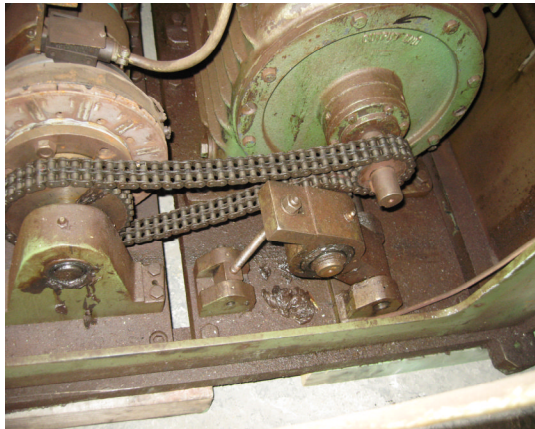

HEAVY DUTY LEVELLER REFURBISHMENT

The Leveller was first completely stripped down & assessed. The useable parts were then sent for steam cleaning and shot blasting & repainting.

Parts which were unable to be re-used were remanufactured. New gears & bearings were also purchased for the machine. New seal kits for cylinder & new pneumatic valves were also fitted.

The machine was then re-assembled by skilled FORMIT engineers ensuring high standards of manufacture are maintained.

All work undertaken as part of this and every full refurbishment is engineered to new standard & is fully guaranteed.

Call the FORMIT spares & service department to discuss your refurbishment requirements and pre-plan the maintenance of all your press feed equipment. This will improve the reliability of your equipment and ensure your customers order requirements are always met.
