

INTRODUCTION

Land & Marine Fabrication Services Ltd is a newly formed company offering a very reliable and high quality service to all customers regardless of the amount of work required. Over 20 years of experience designing, fabricating and supplying various bespoke items for the oil and gas industry and working closely with all relevant certifying authorities such as DNV, Lloyds Register, Bureau Veritas and ABS as well as providing services for the on-shore industries.

SERVICES & CAPABILITIES

We offer a wide range of services including coded welding in accordance with DNV 2.7.1, AWS D1.1 and BS EN 15614. A profile cutting service is available where we are able to cut profiles from carbon steels of varying thicknesses. Ship mobilisation and de-mobilisation is something we offer and we are willing to travel to carry out this work. We will endeavour to fabricate and weld almost anything providing we have the space to do so

- Fast and free quotations.
- Coded welding carried out in accordance with DNV 2.7-1, BS EN ISO 15614-1 and AWS D1.1.
- Profiling service for a wide range of plate thicknesses.
- On site fabrication and welding.
- Fast and reliable emergency call out.
- Ship mobilisation and de-mobilisation work.
- Supply of data manuals containing all relevant documentation and certification showing full traceability when required.
- General fabrication and welding repairs to suit customer's needs.
- Design and calculation reports if required.

PROJECTS

Crane Base made from 80mm x 160mm x 6.3mm Box section with a 25mm thick mounting plate for the crane to sit on. All holes drilled and extra holes strategically drilled to allow for galvanising to be carried out without compromising on structural integrity.

Pipeline installation carried out on site using 5" schedule 40 pipe. All flanges, valves, fittings, pipe and flange studs supplied

Generator housing containers built in accordance with and certified to DNV 2.7.1 standard. Bespoke build to house generators and with exhaust mount brackets and access panels, doors, removable ends and bund wall.

Lifting beam made from 150mm x 150mm x 6.3mm box section built to withstand 4000kgs and load tested to 6000kgs.

FACILITIES

The facilities we have are a 438sqm (22.5m x 19.5m) workshop area with a roller shutter door opening of 6.5m wide and 4.9m high. We also have a 119sqm (7m x 17m) storage / outside working area. We also have a 20' x 10' container used which has a sole purpose of being a contaminant free zone for small stainless steel jobs to prevent cross contamination.

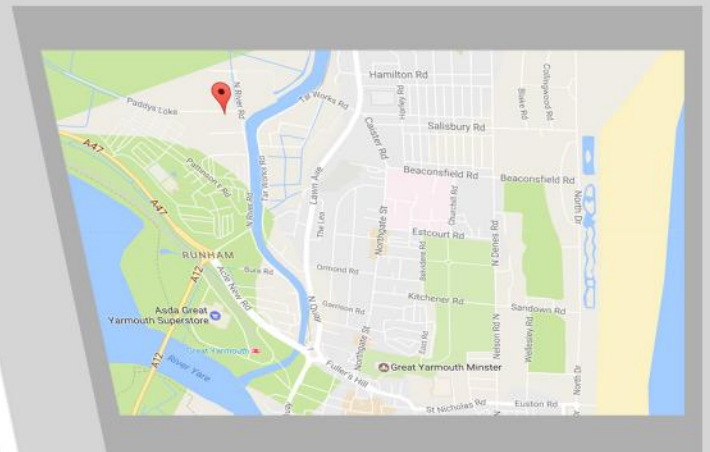

The company is prepared to undertake all kinds of work/contracts to fulfil customer's requirements. If additional staff or larger premises are required we will endeavour to make the necessary arrangements so that the work can be carried out. We are available to carry out site work in various locations as required.
