

SYNTHETIC CLAY

TENNIS COURT CLEANING & MAINTENANCE

Tennis Club & Domestic Synthetic Clay Tennis Courts

Decompacts Infill – Cleans Infill – Redistributes Infill & Adjusts Levels – Removes Moss & Algae

Synthetic clay tennis courts such as SmashCourt, Advantage Red Court, Euro Clay and Classic Clay require regular cleaning and maintenance to ensure they maintain their intended play characteristics and ensure that they are safe for users. Regular maintenance helps keep the infill clean and free draining and at the correct levels.

Depending on any maintenance regimes, the location of the tennis court and the degree of use, a synthetic clay tennis surface will require regular maintenance to fulfil its useful existence. Activities such as drag brushing, moss and algal chemical treatments, and regular cleaning of the surface will help keep the surface in good, serviceable condition. The surface should be inspected regularly and any repairs that are required should be carried out immediately.
