

FOLDING / BUTTERFLY CURTAIN

The folding curtain FS is attached to the side of the tool or the clamping plates of an injection molding machine via strong permanent magnets. It catches moulded parts after demoulding to prevent the parts from contamination, reduce waste and keeps the environment of the machine clean. The advantage of the folding curtain are the mounting strips. These can be placed individually to avoid tempering hoses or other obstacles. The folding curtain only requires enough space to the outside when folded to prevent damage

PRODUCT FEATURES

- Easy assembly via permanent magnets
- Sturdy, special material, view permeable
- Low space requirement between mould and bars
- Adaptable to the tool or to tempering hoses by individual displacement of the mounting strips.
- Adapted number of holding stripes depending on the size of the tool and the folding curtain
