THE G-TEK ESD RANGE

EMBROIDERY SERVICE

We offer an embroidery service at an additional cost, on all orders of over 20 ESD clothing items at list price. Please contact us for further information or to arrange your embroidery.

CLEANING PROCESS

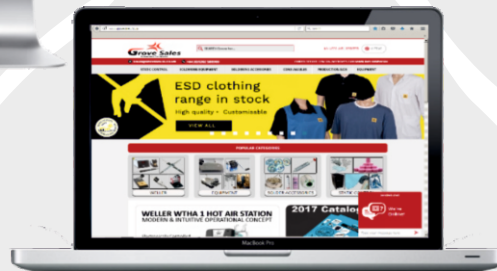

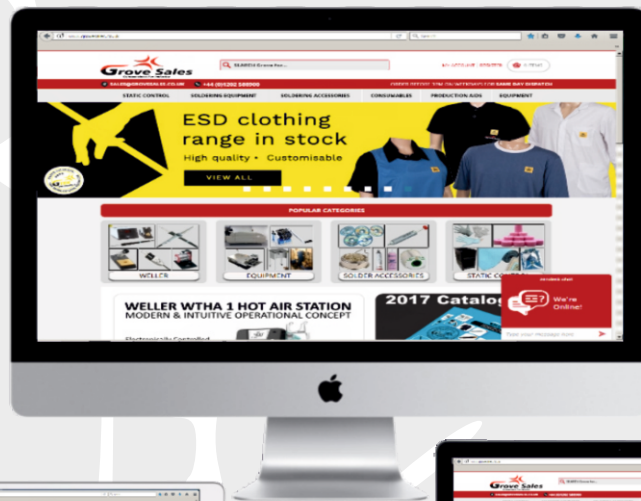

The Carbon suffused monofilament Nylon used in our garments is sensitive to heat, alkali, acids, softeners and bleach. In order to keep the ESD properties of the garments, please follow our recommended instructions.

- Wash in lukewarm water, no more than 40°C (104°F) with liquid laundry detergent. Do not use laundry detergents which contain added fabric softener or bleach.
- In case of severe oil or grease, stronger liquid detergents can be used if they do not contain any chlorine or bleach.
- Do not bleach; do not use alkali; acid or fabric softeners. Do not dry clean.
- Hang dry or dry at 50°C (120°F) or less.

Usually no ironing will be needed as a special additive is used during the finishing process of the woven fabrics. Nevertheless, the garments can be ironed at medium temperature.

PLEASE NOTE: cotton made garments have a 2-4% shrinkage after first washing.
