

DELTA LAUNCH NEW RIBA APPROVED CPD

Delta Membrane Systems Limited are pleased to announce that our seminar entitled Flood Resilience is now a RIBA approved CPD seminar.

We are now offering Architects, Specifiers and Designers the chance to keep up to date with the latest in essential flood resilience, resistance and recoverability protection with the launch of our new and unique CPD Seminar.

Our Flood Resilience, RIBA CPD accredited seminar is designed to provide practical insights in to flood resilience, resistance and recoverability technology and covers important topics such as the environmental benefits of flood resilience, resistance and recoverability, assessments of flood water entering buildings (BS85500:2015), specification considerations, design principles, how flood resilience, resistance and recoverability measures work, as well understanding the different types of flood events. Our RIBA Accredited CPD seminar, lasts 45 minutes, allows individuals to remain up to date with changes in practice and standards so that they can make informed decisions about which products to specify for their projects. Run free of charge at times and locations to suit including lunch.

To request more information or to book a CPD at your premises free of charge, please contact info@deltamembranes.com

Kevin Dodds, Delta's Director in charge of Business Development and Training, commented, "The session will provide all the information and knowledge needed, from an integrated approach, on the solutions for Flood Resilience, Resistance and Recoverability at design and specification stage and we hope that by the end of the seminar participants will have gained confidence in specifying an integrated solution for Flood Resilience, Resistance and Recoverability measures."

"As Manufacturers of waterproofing solutions and designs we have extensive knowledge of water ingress and how it naturally performs in below ground structures, water in a flood situation performs in a very similar mannerism to how it reacts underground in basement scenarios where we have our expertise."

Delta Membrane Systems were thrilled when the BRE contacted us as manufacturers, to look at innovative ways our products could be incorporated in building a flood resilience property. The proposed idea was to convey this property and its solutions to home owners, business owners, construction and insurers alike. The flood resilience house was aimed to highlight flood resilience measures, utilising technology already in existence and adapting it to provide a robust solution. Delta being experts in waterproof design and solutions were eager to join this group as we knew our products and design ideas would work.
