

For customer specific products and projects Vibracoustics Ltd offer a design and manufacture service.

Design and Concepts:

- From your new or existing product design and specifications, we can advise on the design for manufacture and verify the product specification.
- From your initial design G.A and specification, if one of our standard products does not suit your requirements then we can propose design concepts for a bespoke product and work alongside you to define a solution.
- For an existing product we can evaluate and reverse engineer to supply.

Using our Facilities:

- CAD design.
- Product characteristic calculation software.
- Six degrees of freedom analysis program.
- Extensive compound range - to suit the application and environmental conditions.
- UK based manufacturing facility.
- For more detailed information, please refer to our Technical Information and Manufacturing pages.

Quotation:

Once we have established a product design, we will then develop a costing for manufacture based on your quantity requirements, including metal components, compound and prototype / production tooling.

Prototypes:

For your evaluation testing we can supply prototypes with I.S.I.R and advise on test programs and results analysis.

Serial Production:

Once the product has been approved then we can go into serial manufacture and supply against your purchasing schedules. This can be large OEM customers or small batch requirements, a solution particularly useful for customers seeking obsolete spares for machinery, classic vehicles, etc.

SMR Sandwich Mount:
