

The Boat Cover Company

### STANDARD SPECIFICATION OF [TECSEW'S BIMINI CONVERSION](#)

Customers have frequently asked us this question, “can you convert my [Bimini](#) to a [Cockpit Enclosure](#)?”

The standard ways of doing this presents numerous problems to do with the water penetrations where panels are attached together by zips. In addition, it would be hard to keep the overall appearance in keeping.

First of all, you would need to already have a stand alone Bimini and a [Sprayhood](#) fitted to your boat. You can order these from us as we have standard Bimini patterns on file for various yacht models.

### PICTURES OF STANDARD TECSEW'S STAND ALONE BIMINIS

In most cases, a conversion is possible, although not always guaranteed. We would go down to the boat and measure up the Bimini Conversion with the stand alone Bimini and Sprayhood up.

**The Bimini Conversion is made up of panels which are zip attached to the stand alone Bimini canvas and the Sprayhood canvas. These panels are measured on the boat to perfection in order to ensure no water penetration and also to make sure compromises are not made to the appearance and the look of the covers on the boat.**

**All the sides and back panels can be zipped out OR rolled up. Webbing straps are included in the specifications for securing the panels when rolled up. YKK open ended zips are used on the panels connecting pieces for ease of zipping out and back on.**
