TAMPER EVIDENT PACKAGING

for pharmaceutical manufacturers

VALCO MELTON
Adhesive Dispensing & Quality Assurance Systems

NEW PHARMACEUTICAL PACKAGING SECURITY

Protecting products is one of the primary purposes of packaging. This protection is particularly important for pharmaceutical companies who must ensure that every box is perfectly sealed to provide evidence that no one has tampered with the product. Valco Melton introduces a complete solution to safeguard the integrity of each product and the confidence of each consumer.

Kube Melt Unit

Use adhesive as needed with this Melt On Demand system. The Kube also features different configuration options to be adapted to any specific space requirement.

More information here:
<http://bit.ly/2P46j4x>

VD2 Pattern Control

Every application and box needs a different adhesive pattern to ensure a safe close. The VD2 pattern control allows a wide range of pattern options, from beads to small dots, thus improving the performance of the sealed closure.

More information here:
<http://bit.ly/2P7ez3r>

PackChek Camera Inspection System

PackChek Systems inspect each box after the adhesive application. The last step to guarantee a perfectly sealed box.

Ecostitch All Electric Applicator

Combine the best performance and adhesive savings with an electric gun to work at high speeds and reduce downtime and maintenance.

LEGAL ANNOUNCEMENT!

European directive's here.

Beginning February 2019, manufacturers are obligated to apply safety features to each pack. According to the new *Falsified Medicine Directive* in Europe, every pharmaceutical manufacturer must make available adaptations to packaging lines to guarantee that each box remains safely closed from the time of production until the time it reaches the patient's hands.
