# Even More Bailey Products..

Flowstar can now supply from stock, an even wider range of Bailey products. As well as the Bailey 716 safety relief valve, and Bailey G4 pressure reducing valve in almost any flange drilling, we now also keep the Bailey 480 cartridge relief valve and the Bailey Class T pressure reducing valve. The Bailey 480 is a spring operated liquid relief valve that has a cartridge type assembly that can be withdrawn from the body without disturbing the spring setting and hence relieving pressure. This allows the seating surfaces to be cleaned without the need to reset the valve. This valve is typically used on positive displacement pumps, for relief or bypass duties. The Bailey Class T pressure reducing valve is a bronze valve suitable for air, gas and water. It is available with BSP female connections in sizes 1/2" to 2". It has a maximum inlet pressure of 40 Barg and an outlet pressure range of 0.35 to 13.8 Barg over 6 spring ranges.

# Honeywell

Flowstar now keeps the Honeywell D15S pressure reducing valve on stock (see left). It is WRAS approved meaning it is suitable for drinking water. We keep it in sizes 2" to 4" with PN16 flanges and larger sizes are available.

We now also keep spares for the Honeywell BA295S CAT 4 RPZ backflow preventer. We keep replacement check valves and replacement cartridge assemblies.
