

Domestic Floor Coatings

TFS's range of innovative domestic floor coatings is the perfect solution when speed of installation is paramount. The climate in the UK provides a challenge to even the most experienced house builder, resulting in costly delays.

One solution is a factory applied coating, which creates a working platform that is durable, slip resistant and weatherproof. Tradecoat PU heavy duty domestic floor coatings are extremely tough and hard wearing.

It can be exposed during the building process for a minimum of 42 days as certified by BBA certification and is textured to achieve a slip resistant surface, even in wet conditions. Tradecoat PU is available in stippled grey, clear and a range of other colours finishes.

More recent introductions include surface patterns that offer a more homogenous finish. All ensure that the particleboard retains its structural integrity, to last the lifetime of the house.

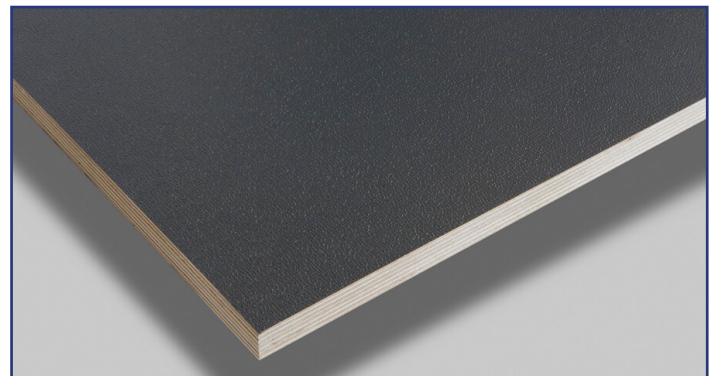

Key Product Features

- ✓ Highly durable finish to provide a minimum of 42 days exposure to the elements
- ✓ BBA Certification to verify performance
- ✓ Use with exterior grade D4 adhesive to all joints to provide waterproof deck
- ✓ Resistant to general wear and tear during build process
- ✓ Ensures particleboard retains structural integrity
- ✓ Available on particleboard, plywood, MDF and cement based boards

Domestic Floor Coatings

Typical Applications

- ✓ New build house floors
- ✓ Multi-usage timber framed buildings
- ✓ Modular buildings
