

# Peel Clean Floor System

Peel Clean Floor System provides the ultimate in protection of floors during the construction process. This specially formulated film delivers significant benefits to builders, leaving a perfectly clean and well presented floor after all trades have finished. It is designed to withstand temporary exposure to the weather during the construction process. The film is factory applied and is also UV resistant with excellent anti-slip properties, providing a safe working platform.

When correctly installed, Peel Clean Floor System can remain exposed to the elements for a minimum of 42 days, as certified by the British Board of Agrément (BBA).

When the building work is complete, peel clean film is easy to brush clean and peel away leaving a pristine, clean floor ready for hand over.

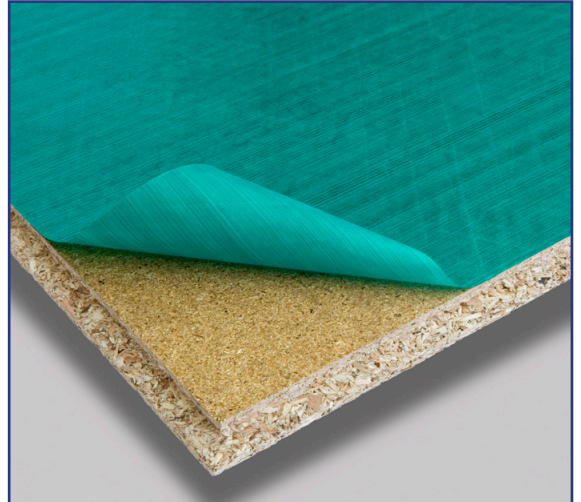

## Key Product Features

- ✓ Water resistant performance certified by BBA for minimum 42 days exterior exposure
- ✓ Taped and tapeless systems available
- ✓ Easy peel adhesive
- ✓ Provides 'clean-floor' finish prior to hand over
- ✓ Eliminates pre-handover cleaning costs
- ✓ Slip resistant safe working platform
- ✓ Ideal for use on Plywood, Particleboard, MDF, OSB, Cementitious and Gypsum based panels
- ✓ Recyclable Film
