TSC-DD v1.00.22 Precautions after Uninstallation

DMC Co., Ltd.

For how to uninstall TSC-DD, please refer to the instruction (readme_e.pdf) included in the driver software.

1. Calibration Log File

Once calibration is performed, the log data will be created in the installation folder (the location is usually C:\Program Files\DMC\TPService\). (The file name will be Cal + the performance time and date of calibration: Calyyyyymmddhhmmss.txt)

These log data of calibrations will remain in the installation folder after TSC-DD is uninstalled. Although these log data will not cause any trouble, you may delete them after reboot (you may delete the whole DMC folder).

2. For Windows 7 64bit

In case of 64bit CPU with Windows 7, the driver file (MES_2X.sys, MES_2XV.sys) will remain in [C:\Windows\System32\drivers] after TSC-DD is uninstalled. Although these log data will not cause any trouble, you may delete them after reboot. Administrative right will be needed to delete them.

*Please be careful not to delete other files.

Sincerely,
