

rail

Kilfrost Rail

Kilfrost Rail is an anti-icing fluid for use on electrified third rails of metro and urban rail systems. Kilfrost Rail is also used as an effective anti-icing compound easily applied to exposed parts on the lower sides of railway rolling stock.

High Performance

Kilfrost Rail's enhanced-viscosity formulation offers protection from frost and freezing precipitation on the rail for extended periods

Safe to use

Kilfrost Rail is sprayable with minimal foaming. For third rail de-icing it can be applied by maintenance vehicles. When used to treat brake callipers and associated rigging, application is from a small 10 L backpack type sprayer

Excellent Ice protection

Kilfrost Rail prevents ice from forming on the rail, and the fluid offers excellent resistance to snow, hail and rain. The product also actively protects the track and other metal infrastructure from corrosion

Reliability

Use of Kilfrost Rail during winter conditions helps trains to run uninterrupted and safely in temperatures of -25°C and below

Environmentally friendly

Kilfrost Rail is water-based, biodegradable and non-toxic

Logistics

Our global coverage means we can be where you need us when you need us, delivering on time even against the odds

Customer support

Kilfrost's 75 years of experience can support you with our technical expertise to offer you the right product

Quality you can trust

Five-star products are at our heart and we are proud of our reputation for continually raising the benchmark through innovation
