Seagulls, feral pigeons and other problem birds are a menace, causing costly damage to buildings every year. Birds carry up to 69 different types of virus and bacteria and any direct contact with them or their droppings poses a very real and serious health risk to people or their pets. In recent years, gulls in particular have become much more aggressive and last year, there were many reported incidents of deliberate attacks on people including babies, as well as fatal attacks on pets.

Bird Free Fire Gel offers a Proven, Safe and Instant Solution

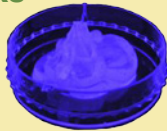

Bird Free Fire Gel

People see it as an orange gel

Here's why it works

Birds see it as fire and so an area to avoid

Manufactured from safe, food grade materials in concentrations as used in the food industry, Bird Free Fire Gel gets its name from the fact that birds see this harmless orange gel as a UV light, which to them looks like a naked flame and therefore an area of danger to be avoided.

With no nasty chemicals involved, there is no risk to the birds, pets or humans and as Bird Free requires no special license to handle or install, it can be installed by any competent handyman.

Neater and more effective than bird spikes, nets or other bird control products, Bird Free is installed around the world, where it is protecting buildings (including hospitals and schools), bridges, pylons and communication masts, ports & airports, statues, information displays and all manner of things.

Bird Free is weather resistant and long lasting

...from blazing sun to snow & ice, rain and winds, Bird Free has demonstrated its ability to withstand extremes of weather and carry on working year after year. Sites in the UK where Bird Free was installed over 5 years ago are still free of nuisance birds!

Originally supplied in tubes and applied into the plastic dishes on site with a mastic gun, Bird Free Fire Gel is now supplied in Time Saver ready filled dishes, cutting installation time by around 50%.

The dishes can be fixed in any orientation and are typically stuck to virtually any surface with a clear exterior grade silicone adhesive such as Silirub. Bird free is however also available in Magnetic Dishes, which form a strong bond to any ferrous metal structure and which make installation even quicker!

From bridge structures and roof support steelwork such as at Bristol Temple Meads Station shown above, to indoor car parks, or rooftops to building signage, and any other problem locations, Bird Free works virtually instantly, driving problem birds away from the protected area within just a few days.

Birds that had survived many attempts to remove them over several years, vacated an indoor car park in Sussex within just a couple of days once Bird Free was installed and some 5 years on, the product is still working, as the car park is still free of birds.

Some Installation Examples

Before installing Bird Free, the site will need to be cleared of any bird detritus and cleaned down with a liquid biocide to prevent the spread of airborne debris and bacteria.

In nesting areas (typically compact areas of up to 300 x 300mm), dishes need to be positioned close together, as birds will try hard to return to their nest site.

In other areas, dishes can be spaced further apart, as shown around the roofline and lower ledges of this London Covent Garden building.

...whilst on flat roofs or skylight panels, a matrix of dishes may be required to ensure that they remain a bird free zone, as shown here installed on the Roof Gardens Restaurant in Kensington, London.

Feral Pigeons are a messy nuisance which cause hundreds of thousands of pounds worth of damage to buildings every year.

They also carry harmful viruses and bacteria which present a serious health risk to humans, so it is important to keep pigeons away from food areas, air conditioning plants, hospitals and medical facilities, playgrounds and so on.

Pigeon spikes and netting are popular products used as bird deterrents, however they can very quickly collect various types of debris and become unsightly or damaged and ineffective.

But help is at hand

Bird Free Fire Gel is an innovative, alternative solution, with a proven track record of getting rid of problem birds from sites safely and virtually instantly, without risk of harm to the birds, people, or pets, etc. ...and it is still proving effective more than 5 years after installation at UK sites.

Supplied pre-loaded in ready to use Standard or Magnetic Dishes, Bird Free offers a discreet, safe and practical solution to nuisance bird problems. No wonder it has become the bird deterrent of choice for major companies and organisations throughout the UK, Europe and across the world.

Bird Free Fire Gel

- Proven, Effective Track Record
- Quick and Easy Installation
- Safe (no nasty chemicals) - harmless to birds, pets & people
- Cost Effective - still working over 5 years after installation...
- Discreet - installations virtually invisible from ground level
