

INTERPERSONAL PROTECTION

#CovidSmartBarrier

Modular barriers

FOR SOCIAL DISTANCING AND ANTI-DROPLET PROTECTION

In the light of the recent events and the challenges it is posing to us all, Access, who has been active for several years in designing safety systems to protect workers in the workplace, has studied new solutions to safeguard employees' health at the workplace. Access's interpersonal barriers act as a guard to prevent involuntary contagion and they provide a suitable solution for all working environments.

DESK GUARD.

This is a standard solution designed to safeguard those employees who work in retail environments such as chemist's, tobacconist's or else and who, in order to perform their task, cannot keep the recommended one metre distance from their interlocutor, therefore need to fit their counter with a Covid19 "anti-droplet" protection barrier.

1000		•	•	slit for documents and cable

All our Read to go! solutions have been designed to be treated with alcohol-based detergents and have a high transparency feature to avoid darkening environment

FLEX GUARD.

Standard and modular solutions designed to safeguard employees who work in a number of different workplaces such as public offices, hospitals, airports, manufacturing sites and need to carry out their tasks in areas restricted by Covid19 'anti-droplets' protective panels. This solution has been designed to separate large areas, create wards, safety corridors and routes in order to prevent people from gathering and interacting in the workplace. This solution allows to create routes which can be re-positioned thanks to the easily removable panels.

+ 50 mm with rollers

Available Customization:

varnish colour upon request

STAND ALONE GUARD.

Modular solution designed to safeguard employees who work in different environments such as public offices, production areas or else, whose work station needs to be isolated by Covid19 'anti-droplets' protection panels. The use of stand-alone separators allows to organize large areas, wards, safety corridors and routes in places such as airports or hospital preventing people from gathering and to re-organise routes. Such solutions can easily be re-positioned to create new safety corridors. Upon request, panels can be fitted with slits to pass documents or products.

TAILOR MADE.

Our tailor made solution has been developed to meet the needs of those companies who require a specific consultation. Thanks to our consulting service, a team of technical experts who work alongside health operators such as occupational doctors, will carry out a preliminary risk analysis and will design an “anti-droplets” solution which meets the customer’s needs.

Pre assembly

customized project

A direct person-to-person interaction entails a risk: the transmission of the COVID19 virus as well as other pathogenic agents. Safeguarding the workplace is a moral obligation in order to guarantee employees a safe space in which to perform their tasks.
