## What is GFS PLUS?

## GFS PLUS

**GFS PLUS** is designed to save you **up to 70%** installation time.

This innovative pre-sleeved CSST system means that you no longer have to sleeve your CSST on-site.

The flexible piping system can bend during installation around obstructions.

**GFS PLUS** is designed to create gas safe, easy to install end-to-end gas connections.

THINK SAFE **THINK GFS**

### BS6891 (8.7) states:

- ✓ Pipework passing through a wall or a floor, whether or not it contains a cavity, shall pass through a sleeve.
- ✓ No sleeve shall have joints along its length.
- ✓ Any sleeve shall pass through the full width of the wall or the full thickness of the floor. The outside of the sleeve shall be secured and sealed at each end to the structure of the building with a suitable building material, e.g. cement mortar or flexible sealant.

**NOTE:** The internal diameter of any sleeve should allow for an annular space around the pipework to enable satisfactory insertion and withdrawal of the pipework and allow adequate sealing between the pipework and the sleeve.
