

## NEW PRODUCTS!

### EXTENDED RANGE OF BELT-DRIVE MODULES

Belt-drive linear modules offer long travel and high speed at a very low cost for applications that do not need the precision of a linear motor or similar. They are also easily combined to form multiple axis units. We offer a wide range of accessories to facilitate this.

#### W-series linear modules

Low to medium duty modules and the most economical in the range.

- Travel up to 2m (longer on request)
- Load capacity 6kg – 35kg depending on model
- Repeatability <0.05mm
- Available with a choice of motor depending on application

#### H-series linear modules

- Load capacity up to 50kg
- Straightness 0.05mm/300mm

#### Special series – T & TX

The T-series has a non-rotating actuator shaft and is suitable for applications such as reject systems, pick-and-place or replacement of pneumatic cylinders.

The TX-series has independent motorised linear and rotary axes for precise translation and rotation of light loads. Example applications include pick-orient-place, capping and screwdriving.

#### Accessories

Wide range of brackets, couplings, motor mounts etc.
