

HD Trolley Shelter

Used by a number of national supermarket chains to provide an all-weather, tough aluminium solution, the Ace HD Trolley Shelter features high grade aluminium extrusions and an internal galvanised steel bump rail which is fitted independently to prevent damage to and from trolley impacts. Created from high strength 80mm SHS aluminium extrusions with a tough 4mm wall thickness, it is designed to withstand the elements and trolley impacts without needing regular maintenance. Side and roof glazing is solid transparent UV stable polycarbonate. The Ace HD Trolley Shelter also provides plenty of ways to customize its functionality and finish. The high grade aluminium extrusions can be powder coated to a RAL or BS colour of your choice and yellow rumble strips and trolley logo stickers can be added as extras to promote the usability of the shelter.
