

Fine bespoke architectural & visual metalwork.

There are three readily available options for top surface on glass floor panels.

Option 1 .

Sandblasted all over, or in a screen printed pattern of any type or pattern.

This surface is opaque, and whilst generally non slip when dry, provides minimal slip resistance when wet. Not really recommended for external use.

Option 2.

Fritted Ceragrit top surface - Standard 7mm Ceragrit (carborundum) printed circles in a 5 spot Pattern @ 11mm spacing, Graphite grey dots - (Totally transparent finish with opaque grey dots)
Very non slip.

Negative print possible at extra over cost. Negative pattern is pictured.

Option 3

Pixellated top surface – heavily textured dot surface moulded into the glass itself – (All opaque)
Very non slip
