

AB PIPELINE SERVICES LTD

CCTV SURVEY / INSPECTION

HIGH PRESSURE WATER JETTING

STRUCTURAL SEWER RE-LINING

ROBOTIC CUTTING

DIRECTIONAL WATER CUTTING

SEWER LOCATING / TRACING

INTERNAL PIPE AND SMALL BORE PIPE CLEANING

EMERGENCY BLOCKAGE CLEANING

Company Profile

AB PIPELINE SERVICES LTD was formed in 1998 and continues as a private concern undertaking all aspects of drainage and sewerage works including CCTV inspections, High Pressure Water Jetting, Structural Re-Lining and Maintenance Contracts.

Our in-house fleet of specialist vehicles, equipment and skilled personnel enables AB Pipeline Services to offer a flexible response to the requirements of our client base. These resources coupled with management and staff commitment to complete contracts within program and budget has stood the business in good stead.

At the same time Health and Safety and Quality Policies are operated for the benefit of employees and clients. We are dedicated to improving all aspects of safety in the workplace.

We recognise the modern role of a contractor and we are able to provide a complete economical and efficient response for any proposed works within our field.

We welcome you to call our office on 01252 838888 where we can personally discuss any matter with you.

Andrew Baker
Managing Director

CCTV Survey/Inspection

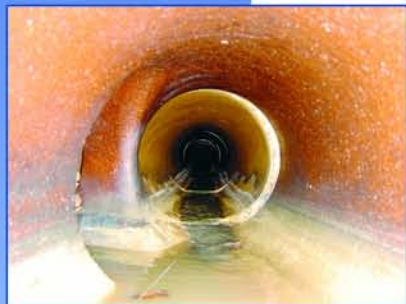

AB PIPELINE SERVICES LTD offers a user-friendly CCTV service combined with the latest technology equipment and highly trained staff, we carry out high quality surveys, which are available in M PEG 2 or DVD format.

Our reporting package which is processed on site offers an easy to follow format. At the end of each day it is returned to our office for quality control and the production of any recommendation on remedial repairs that may be required.

The CCTV inspection system can be used in conjunction with our Eletro-location system to trace pipes where drawings have been lost.

Whether it's a pre-adoption survey, public sewer, or the inspection of a private property we have the answer.

- Sizes from 75mm (3") to man-entry
- Latest technology colour CCTV equipment used
- Purpose built vehicles
- Still photography option
- Pan & tilt cameras available

High Pressure Water Jetting

AB PIPELINE SERVICES LTD offers a comprehensive range of jetting units from trailer jetting units to lorry mounted tanker jetting units with water pressures ranging from 2,000psi to 10,000psi at various water volumes. Each machine is designed to cover all of the services we offer, from silt removal, root cutting to the removal of hard materials such as encrustation or even concrete.

We offer services from clearing a blocked drain on a private house through to major cleaning contracts on public sewers and pre-adoption works.

- Sizes from 32mm to major trunk sewers
- Low and high pressure water jetting units
- Silt to concrete removal
- Cleaning of slot drains, pipes and manholes

Structural Sewer Re-lining

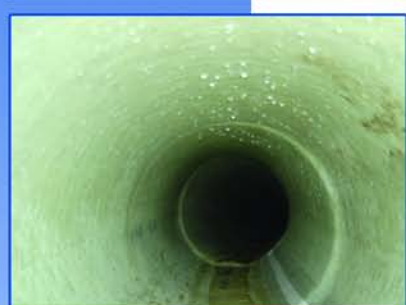

AB PIPELINE SERVICES LTD offers a innovative structural relining system and is tailor made and cost effective alternative to traditional pipe repair and excavation methods. Our structural relining system is classed as a type 2 structural lining system in accordance with the sewer classification manual.

Each liner is designed to overcome many problems such as cracks, fractures, broken pipes, open joints and infiltration. Ideal for defective pipe where excavation is not possible both inside and under buildings also where access is difficult.

Chemical resistant resins can be specified for sensitive sites and extended life requirements, for example where corrosive waste may be present. Installation is rapid therefore keeping disruption to a minimum.

In certain situations a deformed pipe can be reformed back to within 10% deformation allowing the extended life of a collapsing sewer. On completion of the relining process any lateral connection scan be reopened using our robotic cutter.

- Sizes from 100mm upwards
- Computer designed liners
- No dig repair solution
- Various installation and curing methods (to suit site circumstances)

Robotic Cutting

AB PIPELINE SERVICES LTD offers the answer to excavations where intrusions into the pipes are a problem. Our robotic cutter can be used in conjunction with one of our CCTV inspection units as a cost effective method of removing intrusions such as, tree roots, intruding connections and even steel bars.

Our robotic cutter is also used in conjunction with our sewer relining process to remove intrusions prior to relining and the reopening of lateral connection on completion of our lining process.

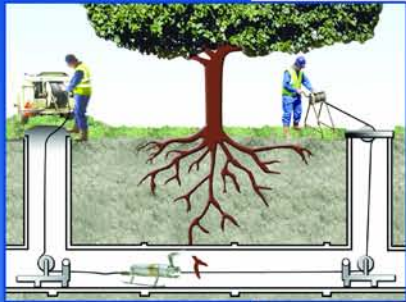

- Sizes from 150mm upwards
- Remote operation
- Suitable for many applications
- Compatible with our CCTV units
- Fast economical service

Directional Water Cutting

AB PIPELINE SERVICES LTD offers a directional water cutter purpose built for the removal of tree root ingress.

Used in conjunction with one of our CCTV inspection units and 10,000psi tanker jetting unit, our cutter can accurately cut the tree roots from each joint or crack as it passes through the pipe.

This cutter will remove mass tree roots, scale, encrustation and hard materials such as concrete.

Our directional water cutter is also used in conjunction with our sewer relining process to remove intrusions prior to relining.

We suggest that pipes be relined on completion of any root cutting works to prevent and further damage.

- Sizes from 150mm upwards
- Remote operation
- Suitable for many applications
- Compatible with our CCTV units

Sewer Locating/Tracing

AB PIPELINE SERVICES LTD offers a service of tracing under ground drainage, with the latest Radiodetection Cat, Genny and Sonde we are able to trace drainage across the roughest terrain.

This can be a stand alone service or combined with one of our CCTV inspection units. Inspecting the condition of the pipe at the same time as the locating is being undertaken.

Internal pipe and small bore pipe cleaning

AB PIPELINE SERVICES LTD offers specialist pipe cleaning on small bore pipes from 25mm upwards. Including urinal traps, soil stack pipes and grease traps.

We also offer regular maintenance contracts on commercial, retail, industrial and private properties.

Emergency Blockage Clearing

AB PIPELINE SERVICES LTD offers a 24 hour 365 days per year emergency call out for blockages. We have on standby high pressure jetting units to assist our client in times of emergency.

From a blocked toilet on a private house to blockages on main trunk sewers we can offer the solution to the problem.

On arrival to site our operators will access the severity of the situation and, if necessary, call on additional services. These include the following:

- High pressure trailer jetting unit
- High pressure tanker jetting unit
- Suction tanker for the disposal of waste
- CCTV inspection unit
- Internal small bore pipe cleaning

Our aim is to resolve any problem in the shortest time possible, at the same time keeping costs to a minimum.
