Coloured Vinyls and Window Films

Coloured vinyls and window films can instantly change the appearance of your glazing. Whether it is to bring life to the glass or hide internal fixtures and fittings, we have transparent coloured tints, opaque coloured vinyls and solid coloured vinyls.

These installations are commonly used to bring colour to nurseries, schools and colleges. The solid coloured vinyls can also be used as an alternative to ceramic backed glazing.

Frosted Privacy Vinyls

Frosted privacy vinyls are a low cost alternative to traditional sandblasting methods. Panes can be treated in their entirety for privacy, yet still allowing a high daylight transmission.

These installations are ideal for refurbishment projects, clinical environments and data protection requirements.

Frosted privacy vinyls can also be partially treated to incorporate clear sections, company logs or text relevant to the location.
