

Hot Surface Protection from Jtech Services

Jtech Services have recently completed the supply and installation of their Low Surface Temperature Radiator Guards and Pipe Boxing systems to another Primary School.

The guards are designed to give easy access for cleaning and maintenance during their long years of service. Each guard features our SKS locking mechanism for straightforward, authorised access.

Most applications for the Jtech Services Radiator Guards and Pipe Boxing range require that they are manufactured in steel, however some situations such as wet rooms and the like require the use of aluminium.

Apart from the standard fire rated white powder coat finish, the Radiator Guards and Pipe Boxing systems also can be supplied in a range of other colours that tie in with new or existing décor.

See what we can offer your project - visit www.jtechservices.co.uk to view our other applications.

Or follow Jtech Services on Instagram or Facebook to see our latest projects.
