Frameless
glass curtains

Private residence, Oxford

Church, Crowhurst. 3.1 m high Frameless glass curtains around sound-proofed children's play area

Architect's practice, London

Frameless Glass Curtains bring an exciting new dimension to any property. Suddenly, rooms are flooded with light as a garden or patio blends into the building to become part of a fresh living experience.

That's because, unlike other sliding/folding doors, Frameless glass curtains allow a landscape without boundaries. No mullions, no hinges, just uninterrupted views. Yet they simultaneously deliver excellent levels of security, soundproofing, and weather-tightness*.

What's more, the use of St Gobain Planitherm 1 energy efficient glass, with a U value of 1.4 W/m²K, means a 63% reduction in heat loss**, resulting in lower fuel bills. It is also more comfortable in summer due to a light reflective coating on the glass. Sound insulation and security are also improved.

To ensure maximum flexibility in use, Frameless glass curtains are available as either single, double, or triple-glazed units. Single-glazed units make stylish room-dividers, while double-glazed, thermally broken units are ideal for any installation in an external wall.

Equally at home in an office or a private house/apartment, Frameless glass curtains add sophistication, style and value to any property.

Carefully made in the UK, each bespoke installation is precision-engineered to last and guaranteed for 10 years*. Let the sunshine in!

*Meets British and EC standards for air permeability, watertightness, and wind resistance.

Private residence, Stowmarket

View of Manchester United's training ground staff restaurant with single-glazed curtains and restaurant extension with double-glazed curtains

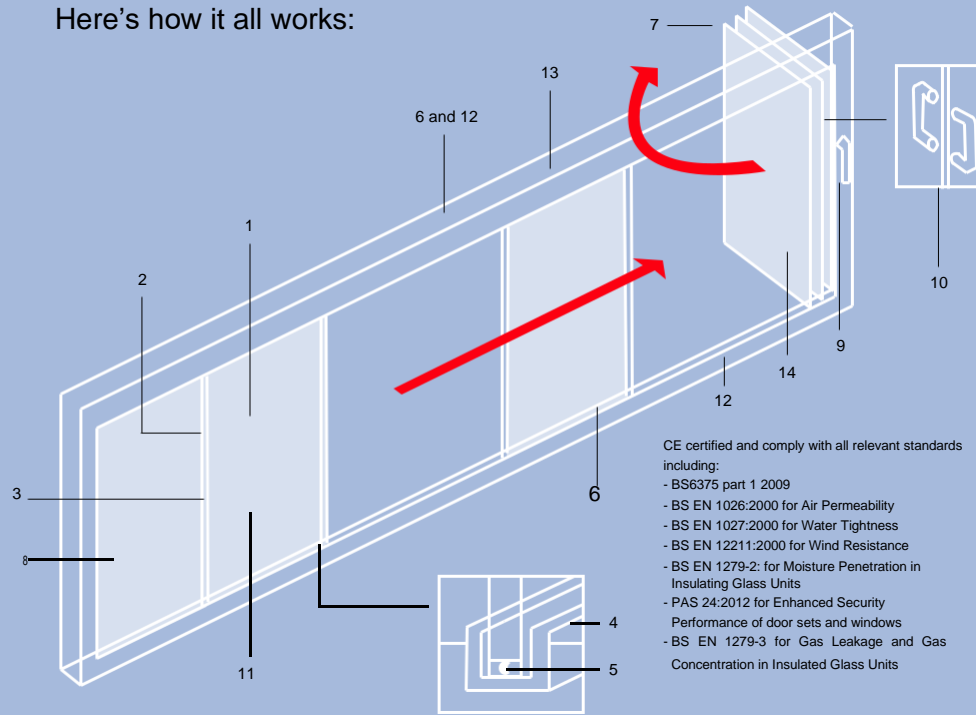

Private residence, Wells

Retail installation, single-glazed

1. Meets British and EU standards for air permeability, water tightness and wind resistance
2. Toughened 20 mm glass spacer at the edges, sandwiched between 4 mm – 6 St Gobain Planitherm 1 energy-efficient glass with argon gas filling. Single-glazed version in 10 or 12mm toughened glass for interior use also available
3. Grey PVC bubble gasket on each curtain edge, when compressed together enables a clear uninterrupted view
4. Low 5mm threshold for safe, easy access
5. Easy, slide-action opening: curtains run on wheels for effortless opening
6. All weight is carried at the base of the curtain, so no reinforcement is needed on the spanning RSJ
7. Curtain depth is 45 mm; when stacked, four panels occupy just 180 mm
8. Heights up to 3m; widths up to 1.3 m per panel
9. Colour co-ordinated inside lock-system provides security; keyed access (the system is very secure and cannot be 'bumped')
10. Stylish glass handles allow access from either side of the curtain
11. Overall 'U' value of 1.4
12. Tracks and profiles in powder-coated aluminium
13. Head deflection of 12 mm incorporated in the design
14. Can open inwards or outwards, to the left- or right-hand side or opening both left- and right-hand sides

Here's how it all works:

CE certified and comply with all relevant standards including:

- BS6375 part 1 2009
- BS EN 1026:2000 for Air Permeability
- BS EN 1027:2000 for Water Tightness
- BS EN 12211:2000 for Wind Resistance
- BS EN 1279-2: for Moisture Penetration in Insulating Glass Units
- PAS 24:2012 for Enhanced Security Performance of door sets and windows
- BS EN 1279-3 for Gas Leakage and Gas Concentration in Insulated Glass Units

Choice of stylish glass handles

Compact stacking of open curtains to create maximum opening

Ideal for use in residential and commercial buildings, with a 10-year guarantee on frame and parts and 5-years on glazing
