

Printed ACM Cladding Panels

Poole Bus Station

Combining rainscreen cladding and high resolution UV printing to produce the largest mural in the UK.

Working with Penson Architects NES developed a process of manufacture that allowed us to print direct to the ACM panels, laminate with a UV protective film and then fabricate into a cladding system. When installed this produced a seamless graphic of over 500 panels well over 1000sqm

Conceived, manufactured and installed by NES, we suggested aluminium composite material (ACM) as a solution. The advantage with the material is that we were able to print directly to the surface and guarantee the finish for a minimum of 12 years.
