

Mechanical Scraper System

*The ultimate tube cleaning solution for:
Condensers, Heat Exchangers, Coolers, and
more.*

The *Mechanical Scraper System* uses our unique booster pump to generate water pressure to propel specially designed cleaners down the tubes cleaning as they go. The cleaners come in a variety of designs, materials, sizes and gauges to suite the cleaning needs of your condenser tubes.

The Mechanical Scraper System can remove a wide range of deposits from algae to hard scale without damaging the wall of the tube. Using a two-pump system up to 6,000 tubes a shift can be cleaned. We have been cleaning tubes with this process very successfully for the past 15 years in the UK and throughout the world.

Cleaning on a regular maintenance schedule can offer you the following benefits that will ultimately save you money.

- Restored To Working Condition
- Better Vacuum
- Extended Tube Life
- Increased Efficiency
- Energy Conservation
- Major Fuel Saving
- Additional Power Generation
- Tube Leak Reduction

In fact there have been many occasions when the cost of the clean has paid for itself in a matter of weeks.
