WebSeal^{SYSTEM}™

WebSeal system — a comprehensive range of 96 well micro titer plates with glass inserts and a silicone/PTFE coated sealing mat.

This system provides the analyst with 96 completely inert chambers and reduces the risk of cross-contamination from well to well when removing the cover.

The WebSeal system is made to a standard 96 well micro titer plate footprint and are compatible with all autosamplers currently using 96 well configurations.

WebSeal silicone/PTFE coated sealing mats, made from the highest grade silicone has a working temperature from -80°C to 200°C. Capable of resealing after multiple injections, the user will not have to replace the cover numerous times and risk cross-contamination or spillage. A unique cutting tool is available to remove each individual vial with the silicone/PTFE coated plug in place for further analysis without the need for sample transfer and potential sample loss.

Available in a variety of sizes from 500µL to 1.5mL using clear, amber or PTFE vials, WebSeal system has the greatest product offering for the analyst working in Life Science, HTS and Combinatorial Chemistry labs. This system also allows the user the flexibility to use multiple 8mm crimp or snap cap seals.

500µL WebSeal Kit

Mid-depth polypropylene 96 well micro titer plate, pre-inserted 500µL glass vials and the WebSeal silicone/PTFE sealing mats.

MicroMat CLR

Evaporation Study

Evaporation study was performed using water, acetonitrile and DMSO at two different volumes (100µL and 200µL) at three different temperatures (28°C, 4°C and -20°C for 24 hours). Plates were filled with solvent, weighed then sealed with MicroMat CLR. The sealed plates were incubated at their respective temperatures for 24 hours. Mats were removed and the plates were reweighed to determine evaporation of sample content.

Results

Temperature	Solvent	% loss after 24 hours
-20°C	Water	0.15%
	Acetonitrile	12.0%
	DMSO	-1.1%
4°C	Water	0.4%
	Acetonitrile	19.2%
	DMSO	0.8%
20°C	Water	1.0%
	Acetonitrile	34.3%
	DMSO	-1.2%
