

CPD Seminar

Safe Roof Access and Natural Smoke Ventilation for Flat Roofs

The Bilco UK CPD seminar 'ACCESS ALL AREAS' outlines current practice in the provision of smoke ventilation and roof access, discussing new design considerations and applications as a result of the latest Building Regulations with particular reference to the areas of fire, safety and security, looking at the most appropriate and best practice guidance for installation of roof hatches and natural smoke vents and demonstrating how new principles are applied.

This CPD examines ladders and how and why the correct hatch ladder combination is essential to a usable building. It also considers roof safety, covering edge protection, step over units and walkways at roof level.

Floor doors are also discussed, with explanations of how they can also be specified as access hatches at roof level for certain applications.

Brief Outline of the CPD Content

- Exploring the purpose and reason for roof access
- Identifying and overcoming access challenges
- Achieving stylish aesthetics with certified solutions
- Assessing design considerations
- An overview of regulations and standards
- Design considerations for smoke ventilation
- Floor doors specified for roof access
- Common errors with ladders
