

Within SCM there is a great deal of expertise in relation to automotive and aerospace components handling, which is one of the company's core business specialist areas. Our equipment is designed and built in the UK at our headquarters in Taunton, and is manufactured to a heavy-duty construction and to the highest standards.

SCM provide conveyor systems, robotic pick and place systems, balancer - bionic arm units, and component manipulators, designed to handle a wide spectrum of automotive and aerospace components.

SCM have recently moved into a brand new building, which will enable increased equipment manufacturing capability.
