

Period Door Installation—New Hall Street, Macclesfield

Merlin needed to provide a door which would match the original doors in the street as close as possible yet provide all the benefits of an engineered made to measure door in terms of weathering and security. The door is very wide at 1.17m and tall at over 3m in height with a fan light above. The owners wanted to incorporate their own design in the fanlight to replicate the original glazing in another door in the street while retaining the period look of the door and maintain the character of the property.
