

### **Swimming Pool Enclosure — Blundell Sands**

In this particular case we were asked to install sliding sash windows by the client after being recommended by another contact. This is a self build development in an exclusive area close to Formby. The couple have a keen eye for detail and wanted to create the dream home for them and their young family which we helped them to achieve.

We installed 22 sliding sash windows for the main house. We were then asked to supply and install two thermally broken aluminium atrium roofs to go over the swimming pool and the conservatory area and two very large sliding doors for the sitting room. At the same time we were also contracted to supply and install the aluminium frames to enclose the entire pool and conservatory area including sliding doors out into the garden. The frames are in RAL7016 grey polyester powder coated aluminium. The glass used here is self cleaning Activ Blue with argon gas fill.

The overall effect is stunning and we have since been asked to provide further glass sliding doors for inside the building. The client is very close to completing the project and they are delighted with the result of many months of effort.
