

# HYGIENIC ENGINEERING, DESIGN, DEVELOPMENT AND FABRICATION

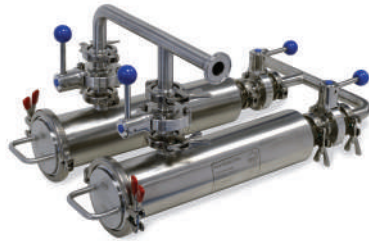

BIOPHARM &  
PHARMACEUTICAL

**Bringing together our wealth of specialist expertise and extensive knowledge.**

Axiom Process combines technical solutions with precision engineering to manufacture high specification pharmaceutical equipment and components to your requirements.

## WHY AXIUM PROCESS?

- Custom solutions
- Full Traceability
- Wealth of experience in hygienic applications
- Compliance with hygienic specifications
- Rigorous testing and inspection procedures
- Comprehensive range of process fittings
- Liquid separation and filtration specialists
- Automation and Programmable Logic control

## FULL TRACEABILITY

We apply stringent adherence to traceability documentation for materials, components and consumables. Our comprehensive project dossiers typically include: full material certification, surface finish certification, welder approvals, weld logs, dye-pen, passivation and TSE certification, as well as boroscopic and video records of internal surfaces.

## GETTING IT RIGHT FIRST TIME, ON TIME AND WITHIN BUDGET

**Understanding Hygienic Industry Standards (including materials, welding techniques, finishing options, approvals, traceability and documentation for high specification pharmaceutical components and systems) takes years of experience.**

You can be confident our advice, guidance and know-how will deliver the quality and performance you expect. Our aim is to get it **RIGHT FIRST TIME**.

Support is given at every stage of an enquiry, from initial discussions, to development, design, manufacture, inspection and delivery. For continuity all projects are assigned to a dedicated Project Engineer ensuring **ON-BUDGET** and **ON-TIME** delivery.

## WHAT WE DO BEST

**High Quality Hygienic Process Equipment and Systems, Precision Engineering, Component Customisation, Complex Pipework Fabrications, Liquid Filtration, Process and Product Separation, Project Engineering.**

- CIP Systems
- MF, UF, NF & RO membrane systems
- Pilot scale up to fully automated commercial scale systems
- Interchangeable heat exchangers designed for steam or electrical heating
- Stainless steel filters
- Tanks & Vessels
- Jacketed pipework
- Custom fabrications
- Ion Exchange Units
- Mixing Skids (interchangeable baffles and impellers)
- Filling Nozzles
- Spray dryers, cyclones
