

SINGLE SOURCE LIFTING SOLUTIONS

SPOT THE WORLIFTS CUSTOMER?

AS INDIVIDUAL AS YOU ARE

We understand in today's economic climate one has to 'cut one's coat according to one's cloth'. However, one area where you needn't compromise, is your materials handling equipment.

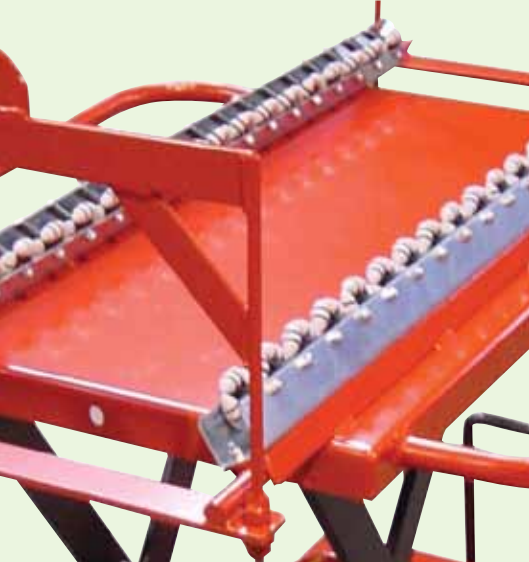

In an industry steeped in tradition, here you will find a unique team of people who are not bound by convention.

Always looking beyond the brief, they are dedicated to providing bespoke solutions for customers with specific materials handling problems, turning 'me-too products' into 'just for you products'.

They approach their work from a different angle, a little off the wall, but nothing off the peg.

From concept, to design, to implementation, the results of this advanced thinking can be seen working for leading manufacturers and retailers throughout the world.

If your materials handling supplier doesn't measure up, we can provide a Free Audit tailored to fit your needs precisely.

FREE!

Bespoke Materials Handling Audit

“Give us an hour of your time, and we'll give you a whole day of ours”

Following a brief one to one consultation on site, we will put together a bespoke report for your consideration - at least a day of quality consultancy time, including input from our engineering and technical teams, at our expense.

It costs nothing to find out how you can improve the performance, efficiency and safety of your manual handling equipment, but it could benefit you a lot in the long run.

THE DESIGN PROCESS

FREE MATERIALS HANDLING AUDIT

A site visit by one of our fully trained staff is often the only way to fully appreciate a materials handling problem or requirement. We can then explore the application and understand in detail the site limitations that we need to accommodate.

We can also review any equipment previously supplied to other customers providing the benefit of lower development costs and shorter lead times.

DESIGN

Our engineers are fully trained on 3D design software and have a significant number of years experience as a department, specialising in all manner of Materials Handling Issues.

Our dedicated team will design and prototype using the very latest industry standard software with conformance to all the necessary regulations. Our bespoke design service incorporates the following stages:

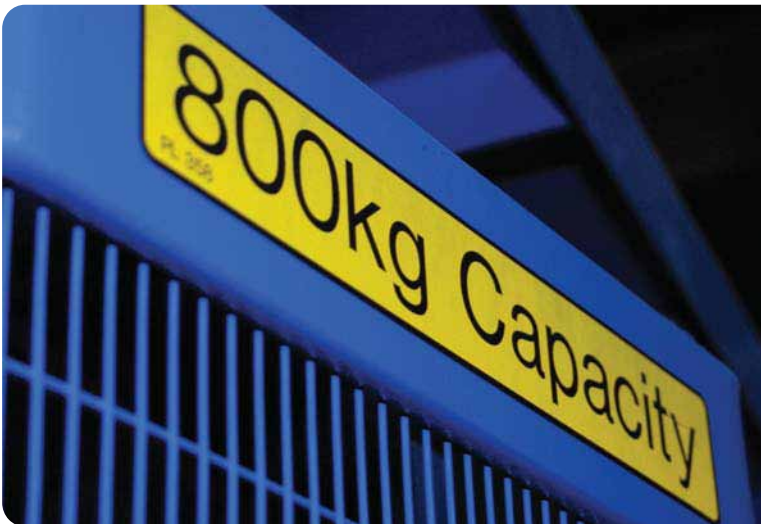

- Comprehensive Brief
- Concept Development
- Detailed Specification
- CAD
- Drawing sign off by customer
- Material Selection
- CAM; Prototyping
- Assembly Procedure
- Manufacture
- Final Product Testing and Certification

MANUFACTURING

Worlifts Limited have a fully equipped in-house manufacturing facility in Bromsgrove, Worcestershire producing products that meet and often exceed the latest CE standards.

TESTING

Worlifts Limited always work to the highest standards and have formulated comprehensive procedures to ensure that these are maintained across the whole spectrum of activity.

Everything from materials and products used to the final configured solution is monitored constantly and all systems undergo rigorous quality control testing leaving you, our customer, with products and services you can totally rely on.

Testing is performed in accordance with relevant standards or customer-defined requirements. Final integration and tests are conducted to demonstrate compliance with design requirements and customer specifications.

DELIVERY AND INSTALLATION

Worlifts Limited offer a broad range of options for delivery and installation of products.

This spans from simply delivering to site through to specialist delivery services incorporating off loading and positioning at customers premises.

We can also offer a full on-site installation taking care of ground works, electrical installation and full induction training on the equipment supplied.
