

FIBREGLASS STRUCTURES

HANDRAILS

We have two standard types of handrail systems. Square section and tubular section. The square section is what we normally use in our workshop and site installations. This handrail system is available in grey or yellow. The tubular system has been designed with customer ease of installation in mind and is available in yellow only.

ACCESS STAIRS

Platforms, stairs, walkways, ramps, handrails and work stations designed, built and installed to your exact requirements by our own skilled craftsmen. A complete nationwide design and build / project management service is available.

All stairways are built to British Standards and can incorporate handrails if required. Gratings and treads can be green, yellow or grey and can have a solid black nosing for added strength.

PLATFORMS

Fibreglass platforms can be built and installed to customer requirements. Platforms are lightweight, corrosion resistant, fire resistant, thermally stable, non-conductive and require zero maintenance. Platforms are designed using the latest CAD software.

LADDERS

Fibreglass ladders and safety cages are suitable for sewage and water treatment plants, chemical plants, offshore / onshore oil and gas plants, power stations etc. All ladders are manufactured to British Standards and can incorporate safety cages and walkthroughs with handrails. Ladders are made to order so any size is possible. All ladders come complete with all required wall and floor fixings. Ladders, cages and walkthroughs can be built in either yellow or grey with short lead time.
