

The Next Generation of High-Capacity Freezers

Large volume storage 40k to 95k vials

- Redesigned dewar for optimized storage up to 15%higher capacity in the same footprint
- LN2 supply plumbing reduces fill times & cryogen waste
- Drilled manifold reduces supply side leaks & increases level measurement accuracy
- Multi-option dual/redundant level sensing
- Variable temperature control

- PLC-based touchscreen controller
- Network, cloud data and remote monitoring options
- Password-protected inventory access
- Automation-ready with onboard inventory options
- Network inventory management and pick lists

- **PLC Control System**
- State-of-the-art touchscreen control system with data network
- Password-protected inventory access
- Built-in set up routine ensures optimum installation with no nuisance alarms
- Simple-to-learn intuitive user interface
- Multiple networking options with available API and IOT data platform

REVO Series - built-in inventory management

- Allows direct sample storage or retrieval to specific freezer locations and eliminates misplaced samples and data resulting from human error
- Inventory screen allows users to easily browse data for items stored in the freezer
- Visual box display allows selection of vial slots to be accessed
- Defined workflow provides additional layer of error proofing
- Inventory data can be accessed remotely and/or synchronized with external systems

True automation path

- Manual system designed for liquid level or temperature control
- Addition of rotation control
- Addition of local inventory management and control
- Addition of container handling robot
- Addition of single sample handling and storage/ retrieval
- Network inventory management and pick lists
- Integration with GPS and RFID sensor network for transport of material between freezers or geography
